U.S. Army Engineer Research and Development Center
PO Box 9005
Champaign, IL 61826-9005*

Final report

Approved for public release; distribution is unlimited.

Prepared for U.S. Army Corps of Engineers
Washington, DC 20314-1000

Abstract: Environmental assessments help determine compliance with current environmental regulations. The U.S. Air Force, U.S. Army, Defense Logistics Agency (DLA), and Corps of Engineers (Civil Works) have adopted environmental compliance programs that identify compliance problems before they are cited as violations by the U.S. Environmental Protection Agency.

Since 1984, the U.S. Army Construction Engineering Research Laboratory, in cooperation with numerous Department of Defense (DOD) components, has developed environmental compliance assessment checklist manuals. The Environmental Assessment and Management (TEAM) Guide was developed for use by all DOD components. Currently there are five participating DOD components: the Air Force, Air National Guard, Army, Civil Works, and DLA. These agencies have agreed to share the development and maintenance of this Guide.

The Guide combines Code of Federal Regulations and management practices into a series of checklists that show legal requirements and the specific operations or items to review. TEAM Guide is supplemented by DOD component-specific manuals detailing DOD component regulations and policies. The New York Supplement was developed to be used in conjunction with the TEAM Guide, using existing New York state environmental legislation and regulations as well as suggested management practices.

FOREWORD

This is ERDC/CERL SR-06-15. The report is based on the information available on Enflex Federal and State Regulations of March 2010.

The research was performed for AEC MIPR 0010005589, technical monitor Mark DItmore; ANG MIPR F9WFEV0028G001, technical monitor is Chuck Smith; AGB W45XMA00130245, technical monitor is Phil Dao; Army Reserve MIPR10CODCD201, technical monitor is Roc Tschirhart; Commerce MIPR 1301-09-SA00110, technical monitor is Greg Falzetta; USACE Fund account 96x3123, technical monitor is John Coho; DHS IAG HSHQDC-08-X-00456, technical monitor is Peter Wixted; DLA MIPR SP1001090, technical monitor is Pam Hillis; USPS MOA-05-CERL-01, technical monitor is Sharon Marsh; and, State Department IAG F3NF369350G002, technical monitor is Janice Smith.

The research was performed by the Business Processes Branch (CN-B), Installations Division (CN), of the U.S. Army Construction Engineering Research Laboratory (CERL). The CERL Principal Investigator is Carolyn O'Rourke. The CERL Researcher is Patricia Kemme. Ms. Michelle Hanson is Branch Chief, CN-B, and Mr. John Bandy is Division Chief, CN. Dr. Ilker Adiguzel is Director of CERL.

CERL is an element of the U.S. Army Engineer Research and Development Center (ERDC), U.S. Army Corps of Engineers. The Director of ERDC is Dr. James R. Houston, and the Commander is COL Gary J

NOTICE

This manual is intended as general guidance for personnel at Federal facilities. It is not, nor is it intended to be, a complete treatise on environmental laws and regulations. Neither the U.S. Government nor any agency thereof, nor any of their employees, makes any warranty, expressed or implied, or assumes any legal liability or responsibility for the accuracy, completeness, or usefulness of any information contained herein. For any specific questions about, or interpretations of, the legal references herein, consult appropriate legal counsel.

SECTION 1

AIR EMISSIONS MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Air Emissions Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Acquired Structure* - A structure donated or loaned from a property owner for the purpose of conducting fire training (6 NYCRR 215.1) [Added March 2010].
- *Act* - The Federal Clean Air Act, 42 U.S.C. Section 7401, et seq., as amended by Public Law 101-549, 15 Nov 1990 (6 NYCRR 200.1).
- *Adsorptive Cartridge Filter* - a replaceable cartridge filter that contains diatomaceous earth or activated clay as the filter medium (6 NYCRR 232.2).
- *Actual Emissions* - those emissions resulting from normal daily operations, verifiable by operating records or other compliance monitoring activities, averaged over the prior two yr or some other more representative time interval, justified by the applicant to the Department's satisfaction (6 NYCRR 201-2.1).
- *Administrator* - the Administrator of the United States Environmental Protection Agency or designee (6 NYCRR 200.1).
- *Aerosol Coating Product* - A pressurized coating product containing pigments or resins that dispenses product ingredients by means of a propellant, and is packaged in a disposable can for hand-held application, or for use in specialized equipment for ground traffic/marketing applications (6 NYCRR 205.2) [Added March 2006].
- *Agricultural Land* - The land and on-farm buildings, equipment, manure processing and handling facilities, and practices that contribute to the production, preparation and marketing of crops, livestock and livestock products as a commercial enterprise, including a 'commercial horse boarding operation' and 'timber processing'. Such farm operation may consist of one or more parcels of owned or rented land, which parcels may be contiguous or noncontiguous to each other (6 NYCRR 215.1) [Added March 2010].
- *Agricultural Waste* - Any waste from naturally grown products such as vines, trees, and branches from orchards, leaves, and stubble. Agricultural waste does not include pesticide containers, fertilizer bags, large plastic storage bags (including bags commonly known as "Ag bags"), offal, tires, plastic grain bags, and other plastic or synthetic materials (6 NYCRR 215.1) [Added March 2010].
- *Air Cleaning Installation, Air Cleaning Device or Control Equipment* - any method, process or equipment that removes, reduces or renders less noxious air contaminants discharged into the outdoor atmosphere (6 NYCRR 200.1).
- *Air Contaminant or Air Pollutant* - A chemical, dust, compound, fume, gas, mist, odor, smoke, vapor, pollen, or any combination thereof (6 NYCRR 200.1).
- *Air Contaminant Emission Control System* - equipment designed for installation on a motor vehicle or motor vehicle engine for the purpose of reducing the air contaminants emitted from the motor vehicle or motor vehicle engine, or a system or engine modification on a motor vehicle or motor vehicle engine which causes a reduction

of air contaminants emitted from the motor vehicle or motor vehicle engine, including but not limited to exhaust control systems, fuel evaporation control systems and crankcase ventilating systems (6 NYCRR 218-1.2) [Added March 2003].

- *Air Contamination* - the presence in the outdoor atmosphere of one or more air contaminants which contribute or which are likely to contribute to a condition of air pollution (6 NYCRR 200.1).
- *Air Contamination Source* or *Emission Source* - any apparatus, contrivance or machine capable of causing emission of any air contaminant to the outdoor atmosphere, including any appurtenant exhaust system, air cleaning device, but excepting an indirect source of air contamination as defined in Part 203 of this Title. Where a process at an emission unit uses more than one apparatus, contrivance, or machine in combination, the combination may be considered a single emission source (6 NYCRR 200.1).
- *Air Pollution* - the presence in the outdoor atmosphere of one or more contaminants in quantities, of characteristics and of a duration which are or may be injurious to human, plant or animal life or to property or which unreasonably interfere with the comfortable enjoyment of life and property (6 NYCRR 200.1).
- *Annual* - refers to a period of time based upon a calendar yr commencing January 1st and terminating midnight December 31st (6 NYCRR 200.1).
- *Annual Throughput* - the amount of gasoline transferred into or dispensed from a gasoline dispensing site during twelve consecutive months (6 NYCRR 230.1).
- *Antenna Coating* - A coating labeled and formulated exclusively for application to equipment and associated structural appurtenances that are used to receive or transmit electromagnetic signals (6 NYCRR 205.2) [Added March 2006].
- *Antifouling Coating* - A coating labeled and formulated for application to submerged stationary structures and their appurtenances to prevent or reduce the attachment of marine or freshwater biological organisms. To qualify as an antifouling coating, the coating must be registered with both the EPA under the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. section 136 'et. seq.')(see Table 1, section 200.9 of this Title) and with the department pursuant to Part 326 of this Title (6 NYCRR 205.2) [Added March 2006].
- *Applicable Requirement* - a standard or other requirement in State or Federal regulations required under the Act as it applies to an emissions unit or emissions source, including requirements that have been promulgated or approved by EPA through rulemaking at the time of issuance of a permit but have future effective compliance dates. Applicable requirements generally include the following (6 NYCRR 201-2.1):
 1. any standard or other requirement approved in the New York State Implementation Plan (SIP) that is effective at the time of permit issuance;
 2. any term or condition of any preconstruction permits issued pursuant to the requirements of Title I of the Act, including the Federal Prevention of Significant Deterioration (PSD) program or New Source Review in nonattainment areas, pursuant to Part 231 of this Title that are required under the Clean Air Act or are taken by a source to avoid an applicable requirement;
 3. any standard or requirement promulgated to control emissions under Section 111 of the Act (including the New Source Performance Standards or NSPS);
 4. any standard or other requirement promulgated under Section 112 of the Act, including any requirement to control the accidental release of regulated substances, pursuant to Section 112(r)(7) of the Act;
 5. any standard, regulation or other requirement of the Acid Rain Program under Title IV of the Act;
 6. any compliance assurance requirements established pursuant to Section 504(b) or Section 114(a)(3) of the Act
 7. any standard, regulation or other requirement governing municipal solid waste incineration and hospital/medical/infectious waste incineration promulgated under Section 129 of the Act;
 8. any standard, regulation or other requirement promulgated to protect stratospheric ozone under Title VI of the Act unless the Administrator has determined that such requirements need not be contained in a permit issued under this Part;

9. any standard or other requirement of the program to control air pollution from outer continental shelf facilities under Section 328 of the Act;
 10. any national ambient air quality standard, increment, or visibility requirement under Title I, Part C of the Act, but only as it would apply to portable operations;
 11. a standard or other requirement for consumer and commercial products, under Section 183(e) of the Act; and
 12. a standard or other requirement for tank vessels, under Section 183(f) of the Act.
- *Architectural Coating* - a coating to be applied to stationary structures and their appurtenances at the site of installation, to portable buildings at the site of installation, to pavements, or to curbs. Coatings applied in shop applications or to non-stationary structures such as airplanes, ships, boats, railcars, and automobiles, and adhesives are not considered architectural coating for the purposes of this rule (6 NYCRR 205.2) [Added March 2004; Revised March 2006]:
 - *Area Source* - for the purposes of Title V permitting, any stationary source of hazardous air pollutants that is not a major stationary source. For the purposes of this Part, the term "area source" shall not include motor vehicles or non-road vehicles (6 NYCRR 201-2.1).
 - *Articles* - clothing, garments, textiles, fabrics, leather goods, and the like, that are dry cleaned (6 NYCRR 232.2).
 - *Asphalt* - the dark brown to black cementitious material (solid, semisolid, or liquid in consistency) of which the main constituents are bitumens that occur naturally or as a residue of petroleum refining (6 NYCRR 211.1).
 - *Attainment Area* - any area of the state meeting all National Ambient Air Quality Standards (NAAQS) for a specific air contaminant as designated pursuant to section 107(d) of the Federal Clean Air Act .(NOTE: A list of such areas may be obtained from any office of the Department of Environmental Conservation.) (6 NYCRR 200.1) [Revised March 2008].
 - *Azeotropic Control Device* -a dry cleaning control system where the vapor stream from the dry cleaning machine drum is first cooled and condensed to reduce the concentration of perc in the vapor stream, and is then treated with water to further enhance the displacement of perc from the articles when the vapor stream is returned to the machine drum. There is no exhaust to the atmosphere during the drying cycle (6 NYCRR 232.2).
 - *Best Available Control Technology (BACT)* - an emission limitation or equipment standard based on the maximum degree of reduction of each contaminant emitted from stationary air contamination source which the Department determines is achievable for such source on a case-by-case basis considering:
 1. process, fuels, and raw material available and to be used
 2. engineering aspects of the application of various types of control technology that has been adequately demonstrated
 3. process and fuel changes
 4. respective costs of the application of all such control technologies, process changes, alternative fuels, etc.
 5. applicable state and Federal emission standards.

In no event shall application of BACT result in emissions of any contaminant that will exceed the emissions allowed by any applicable standard established (6 NYCRR 200.1).

- *Bitumens* - Black or brown materials including, but not limited to, asphalt, tar, pitch, and asphaltite that are soluble in carbon disulfide, consist mainly of hydrocarbons, and are obtained from natural deposits or as residues from the distillation of crude petroleum or coal (6 NYCRR 205.2) [Added March 2006].
- *Bituminous Roof Coating* - A coating which incorporates bitumens that is labeled and formulated exclusively for roofing (6 NYCRR 205.2) [Added March 2006].

- *Bituminous Roof Primer* - A primer which incorporates bitumens that is labeled and formulated exclusively for roofing (6 NYCRR 205.2) [Added March 2006].
- *Boiler* - a device that combusts fuel and produces steam or heats water or any other heat transfer medium (NYCRR 227-2.2) [Added March 2004].
- *Bond Breaker* - A coating labeled and formulated for application between layers of concrete to prevent a freshly poured top layer of concrete from bonding to the layer over which it is poured (6 NYCRR 205.2) [Added March 2006].
- *Byproduct Coke Oven Battery* - a process for the destructive distillation of coal and separation of gaseous and liquid distillates from the carbon residue or coke, which includes ovens, charging systems (including larry cars, jumper pipes, charging conveyors from coal storage and/or weigh bins), auxiliary gas collection systems, heating systems and flues, pushing systems, door machines, mud trucks, quench cars, quenching systems, desulfurization systems, sulfur recovery units, waste heat stacks and air cleaning devices or control equipment (including oven patching equipment, door hoods, sheds, and other hoods either movable or stationary and with or without water sprays (6 NYCRR 200.1).
- *Calcimine Recoaters* - Flat solvent borne coatings formulated and recommended specifically for recoating calcimine-painted ceilings and other calcimine-painted substrates (6 NYCRR 205.2) [Added March 2006].
- *California Standards* - those standards for motor vehicles and motor vehicle engines that the State of California has adopted and is permitted to adopt under 42 USC 7543 (see Table 1, section 200.9 of this Title) and that other states are permitted to adopt under 42 USC 7507 (see Table 1, section 200.9 of this Title) (6 NYCRR 218-1.2) [Added March 2003].
- *Camp Fire* - any outdoor open fire less than three feet in height, length and width or diameter (6 NYCRR 215.1) [Added March 2010].
- *CARB* - the California State Air Resources Board as defined in California's Health and Safety Code, section 39003 (1999) (see Table 1, section 200.9 of this Title) (6 NYCRR 218-1.2) [Added March 2003].
- *Carbon Adsorber* - an air cleaning device that consists of an inlet for exhaust gases from a dry cleaning machine; activated carbon in the form of a fixed bed, cartridge, or canister, as an adsorbent; an outlet for exhaust gases; and a system to regenerate, or reclaim saturated adsorbent (6 NYCRR 232.2).
- *Carbon Monoxide Control Area (Control Area)*(6 NYCRR 225-3.2) [Added March 2003]:
 1. the Consolidated Metropolitan Statistical Area (CMSA) in which a carbon monoxide nonattainment area is located or
 2. if the area is not located in a CMSA, the Metropolitan Statistical Area (MSA) in which the area is located; or
 3. if an area which was designated as nonattainment is redesignated as attainment for carbon monoxide, that CMSA or MSA as long as is necessary to maintain such standard in that area. The following shall be considered to be carbon monoxide control areas:
 - a. New York City Consolidated Metropolitan Statistical Area (New York City CMSA). This area consists of the counties of Bronx, Kings, Queens, New York, Richmond, Orange, Rockland, Putnam, Westchester, Nassau and Suffolk.
 - b. Syracuse Metropolitan Statistical Area (Syracuse MSA). This area consists of the counties of Onondaga, Oswego and Madison.
- *Cartridge Filter* - a replaceable cartridge filter that contains one of the following as the filter medium: paper, activated carbon, or paper and activated carbon. A cartridge filter contains no diatomaceous earth or activated clay. Cartridge filters include, but are not limited to: standard filters, split filters, "jumbo" filters, and all carbon polishing filters (6 NYCRR 232.2).

- *Certification* - a finding by the California Air Resources Board that a motor vehicle, motor vehicle engine, or air contaminant emission control system has satisfied the criteria adopted by CARB for the control of specified air contaminants from motor vehicles (6 NYCRR 218-1.2) [Added March 2003].
- *Certified Device* - an air contaminant emission control system for which a certification has been issued by CARB or the Department (6 NYCRR 218-1.2) [Added March 2003].
- *Chemical Waste* - liquid or semiliquid waste other than waste oil, including but not limited to, spent solvents, tars, paints, resins, and wastes and sludges from any process (6 NYCRR 225-2.2).
- *Clear Brushing Lacquers* - Clear wood finishes, excluding clear lacquer sanding sealers, formulated with nitrocellulose or synthetic resins to dry by solvent evaporation without chemical reaction and to provide a solid, protective film, which are intended exclusively for application by brush and which are labeled as specified in section 205.4(e) of this Part (6 NYCRR 205.2) [Added March 2006].
- *Clear Wood Coatings* - Clear and semi-transparent coatings, including lacquers and varnishes applied to wood substrates to provide a transparent or translucent solid film (6 NYCRR 205.2) [Added March 2006].
- *Closed-loop Machine* - dry cleaning equipment in which washing, extraction, and drying are all performed in the same single unit (also known as a dry-to-dry unit) and which recirculates perc-laden vapor through a primary control system (e.g. refrigerated condenser) with no exhaust to the atmosphere during the drying cycle. A closed-loop machine may allow for venting to the ambient air through a local exhaust ventilation system, such as a door fan, after the drying cycle is complete and only while the machine door is open (6 NYCRR 232.2).
- *Coating* - A material applied onto or impregnated into a substrate for protective, decorative, or functional purposes. Such materials include, but are not limited to, paints, varnishes, sealers, and stains (6 NYCRR 205.2) [Added March 2006].
- *Colorant* - A concentrated pigment dispersion in water, solvent, and/or binder that is added to an architectural coating after packaging in sale units to produce the desired color (6 NYCRR 205.2) [Added March 2006].
- *Concrete Curing Compound* - A coating labeled and formulated for application to freshly poured concrete to retard the evaporation of water (6 NYCRR 205.2) [Added March 2006].
- *Concrete Surface Retarders* - A mixture of retarding ingredients such as extender pigments, primary pigments, resin, and solvent that interact chemically with the cement to prevent hardening on the surface where the retarder is applied, allowing the retarded mix of cement and sand at the surface to be washed away to create an exposed aggregate finish (6 NYCRR 205.2) [Added March 2006].
- *Construction* - the initiation of physical on-site construction activities that are of a permanent nature excluding site clearing and excavation. Such activities include, but are not limited to, installation of building supports and foundations, laying underground pipework and construction of permanent storage structures (6 NYCRR 201-2.1).
- *Co-located* - sharing a common wall, floor, or ceiling with a residence or business (6 NYCRR 232.2).
- *Colorimetric Detector Tube* - a glass tube (sealed prior to use), containing material impregnated with a chemical that is sensitive to perc and is designed to measure the concentration of perc in air (6 NYCRR 232.2).
- *Combustion Installation* - an installation, consisting of a one or more furnace, device, engine or turbine in which fossil fuel and/or wood is burned with air or oxygen and the air contaminant emissions include only those products resulting from (6 NYCRR 200.1) [Revised January 2000]:
 1. combustion of the fuel;
 2. additives or impurities in the fuel; and

3. material introduced for the purpose of altering air contaminant emissions.

- *Commissioner* - Commissioner of Environmental Conservation of the State of New York (6 NYCRR 200.1).
- *Condenser* - an air cleaning device that removes condensable vapors by a reduction in the temperature of the exhaust gases or, in the case of a surface condenser, by contact of the exhaust gases with structures that are cooled by a circulating cooling fluid (6 NYCRR 232.2).
- *Cool-down* - the portion of the drying cycle that begins when the heating mechanism deactivates and the refrigerated condenser continues to reduce the temperature of the air recirculating through the drum to reduce the concentration of perc in the drum (6 NYCRR 232.2).
- *Coating Line* - the application of one or more surface coatings, using one or more applicators, together with any associated drying or curing areas. A single coating line ends after drying or curing and before other surface coatings are applied. For any web coating line this term means an entire coating application system, including any associated drying ovens or areas located between an unwind station and rewind station, that is used to apply surface coatings onto a continuous strip or web. It is not necessary to have an oven or flash area in order to be included in this definition (6 NYCRR 228.2).
- *Coating System* - a series of surface coatings applied sequentially at the same coating line (6 NYCRR 228.2) [Revised March 2004].
- *Cold Cleaning Degreasing* - batch process of solvent metal cleaning, with liquid solvent, by spraying, brushing, flushing or immersion while maintaining the solvent below its boiling point. Wipe cleaning is not included in this definition (6NYCRR 226.1) [Added March 2004].
- *Combined Cycle Combustion Turbine* - any combustion turbine that recovers heat from the exhaust gases to heat water or generate steam (6 NYCRR 227-2.2).
- *Combustion Installation* - an installation, consisting of one or more furnace, device, engine, or turbine in which fossil fuel and/or wood is burned with air or oxygen and the air contaminant emissions include only those products resulting from:
 1. combustion of the fuel
 2. additives or impurities in the fuel
 3. material introduced for the purpose of altering air contaminant emissions. A combustion installation may consist of:
 - a. a single furnace exclusively connected to an air cleaning device and/or stack
 - b. two or more furnaces connected to a common air cleaning device and/or stack (6 NYCRR 200.1).
- *Combustion Turbine* - a stationary combustion engine that operates with a rotary motion (6 NYCRR 227-2.2).
- *Commence Construction or Commence Modification* - to initiate a program of onsite construction, including but not limited to site clearance, grading, dredging, land filling or entering into a contract for paving or installation of foundations for the fabrication, erection or installation of any component of an indirect source area or in preparation for the fabrication, erection or installation of the component of an indirect source. Construction or modification of a highway or road does not include construction or modification of curb cuts, driveways or other entrance ways to public highways from private property which are not subject to the provisions of 6 NYCRR Part 203 (6 NYCRR 203.2).
- *Commercial Waste* - solid waste generated by stores, offices, institutions, restaurants, warehouses, and nonmanufacturing activities at industrial facilities (6 NYCRR 219.1).
- *Commissioner* - Commissioner of Environmental Conservation of the State of New York (6 NYCRR 200.1).

- *Confined Process* - any process whose emissions are contained or captured in a hood and then conveyed through a duct, vent or stack prior to discharge to the outer atmosphere (6 NYCRR 200.1).
- *Conforming Gasoline* - any gasoline that conforms to the requirements of sections 225-3.3 and 225-3.4 of this Subpart (6 NYCRR 225-3.2).
- *Consumer* - any person who purchases or otherwise acquires a new portable fuel container or spout or both portable fuel container and spout for personal, family, household, or institutional use. Persons acquiring a portable fuel container or spout or both portable fuel container and spout for resale are not "consumers" for that product (6 NYCRR 239-2) [Added March 2003].
- *Container* - any portable device in which a material is stored, transported, or otherwise handled (6 NYCRR 228.2).
- *Continuous Emissions Monitoring System (CEMS) Certification Protocol* - emission testing procedures which demonstrate compliance with requirements for system accuracy and precision (6 NYCRR 227-2.2) [Revised March 2004].
- *Conveyorized Degreasing* - continuous process of solvent metal cleaning by operating with either cold or vaporized solvents (6 NYCRR 226.1) [Added March 2004].
- *Cutback Asphalt* - any asphalt that has been liquefied by blending with petroleum solvents (Diluents) or, in the case of some slow cure asphalts (road oils), which have been produced directly from the distillation of petroleum (6 NYCRR 211.1).
- *Day* - A 24-h period beginning at midnight (6 NYCRR 200.1).
- *Degreaser* - any solvent metal cleaning machine used to perform cold cleaning degreasing, remote reservoir degreasing, conveyorized degreasing, or open-top vapor degreasing (6 NYCRR 226.1) [Added March 2004].
- *Department* - The New York State Department of Environmental Conservation (6 NYCRR 200.1).
- *Desorption* - regeneration or stripping of an activated carbon bed, or any other type of vapor adsorber by removal of the adsorbed solvent using hot air, steam, or other means (6 NYCRR 232.2).
- *Diesel Engine* - an internal combustion engine in which air is compressed to a temperature capable of igniting fuel injected into the cylinders where combustion occurs (6 NYCRR 200.1).
- *Dioxin Equivalent* - any combination or mix of polychlorinated dibenzo-para-dioxins and polychlorinated dibenzo furans containing from four to eight chlorine atoms which are expressed as 2, 3, 7, 8 tetrachlorinated dibenzo- para-dioxin equivalents using the toxic equivalency factors listed below. Standard conditions upon which these data are referenced are an absolute pressure of 760 mm mercury and 20 °C at 7 percent oxygen (6 NYCRR 219.1):

| Compound | Factor |
|---|--------|
| monochlorinated dibenzo-para-dioxins (all) | 0 |
| trichlorinated dibenzo-para-dioxins (all) | 0 |
| dichlorinated dibenzo-para-dioxins (all) | 0 |
| 2, 3, 7, 8 tetrachlorinated dibenzo-para-dioxin | 1 |
| other tetrachlorinated dibenzo-para-dioxins | 0.01 |
| 2, 3, 7, 8 pentachlorinated dibenzo-para-dioxin | 1 |
| other pentachlorinated dibenzo-para-dioxins | 0.01 |
| 2, 3, 7, 8 hexachlorinated dibenzo-para-dioxin | 0.03 |
| other hexachlorinated dibenzo-para-dioxins | 0.0003 |
| 2, 3, 7, 8 heptachlorinated dibenzo-para-dioxin | 0.001 |

| | |
|---|---------|
| other heptachlorinated dibenzo-para-dioxins | 0.00001 |
| octachlorinated dibenzo-para-dioxins | 0 |
| 2, 3, 7, 8 tetrachlorinated dibenzo furan | 0.33 |
| other tetrachlorinated dibenzo furans | 0.003 |
| 2, 3, 7, 8 pentachlorinated dibenzo furan | 0.33 |
| other pentachlorinated dibenzo furans | 0.003 |
| 2, 3, 7, 8 hexachlorinated dibenzo furan | 0.01 |
| other hexachlorinated dibenzo furans | 0.0001 |
| 2, 3, 7, 8 heptachlorinated dibenzo furan | 0.001 |
| other heptachlorinated dibenzo furans | 0.00001 |
| octachlorinated dibenzo furans | 0 |

- *Dip Tank* - a separate tank that contains perc and is used for purposes other than dry cleaning (e.g., waterproofing) (6 NYCRR 232.2).
- *Distillate Oil* - a fuel oil consisting of distilled fractions and having a kinematic viscosity of 5.8 centistokes or less at 100 °F. This includes ASTM grade numbers 1 and 2 fuel oil, ASTM grade numbers 1-D and 2-D diesel fuel oil and proposed ASTM grade numbers 1-GT and 2-GT gas turbine fuel oil (6 NYCRR 200.1).
- *Distributor* - any person who transports or stores or causes the transportation or storage of gasoline at any point between a refinery or importer's facility and a retail outlet or wholesale purchaser-consumer's facility (6 NYCRR 225-3.2).
- *Distributor* - any person to whom a portable fuel container or spout or both portable fuel container and spout is sold or supplied for the purpose of resale or distribution in commerce. This term does not include manufacturers, retailers, and consumers (6 NYCRR 239-2) [Added March 2003].
- *Diverter Valve* - a flow control device that prevents room air from passing through a refrigerated condenser when the door of a dry cleaning machine is open (6 NYCRR 232.2).
- *Door Fan* - a local exhaust ventilation system designed to provide for a minimum 100 fpm inward air velocity into the effective door open area of a dry cleaning machine whenever the door is opened, and where the perc emissions are controlled by a carbon adsorber or equivalent control prior to venting to the outer air (6 NYCRR 232.2).
- *Drum* - the rotating cylinder or wheel of the dry cleaning machine that holds the articles being cleaned (6 NYCRR 232.2).
- *Dry Cleaning* - the process used to remove soil, greases, paints and other unwanted substances from articles with the use of perc (6 NYCRR 232.2).
- *Dry Cleaning Control System* - equipment (e.g., carbon adsorber, refrigerated condenser, azeotropic unit, etc.) or an air cleaning device used to reduce the amount of air pollutant(s) in an air stream prior to discharge to the atmosphere (6 NYCRR 232.2).
- *Dry Cleaning Equipment* - any machine, device, or apparatus used to dry clean articles (6 NYCRR 232.2).
- *Dry Cleaning Facility* - a facility with one or more dry cleaning systems (6 NYCRR 232.2).
- *Dry Cleaning System* - all of the following equipment, devices, or apparatus associated with the perc dry cleaning operations, including, but not limited to: dry cleaning equipment; filter or purification systems; waste holding, treatment, or disposal systems; perc supply systems; dip tanks; pumps; gaskets; piping, ducting, fittings, valves, or flanges that convey perc-contaminated air; and dry cleaning control systems (6 NYCRR 232.2).

- *Drying Cabinet* - a housing in which materials that have been previously dry cleaned in perc are dried instead of being dried by tumbling in a dry cleaning machine (6 NYCRR 232.2).
- *Drying Cycle* - the operation used to actively remove the perc remaining in the materials after washing and extraction. For closed-loop machines, the heated portion of the cycle is followed by cool-down and may be extended beyond cool-down by the activation of a control system. The drying cycle begins when heating coils are activated and ends when the machine ceases rotation of the drum (6 NYCRR 232.2).
- *Dry Fog Coating* - A coating labeled and formulated only for spray application such that overspray droplets dry before subsequent contact with incidental surfaces in the vicinity of the surface coating activity (6 NYCRR 205.2) [Added March 2006].
- *Drying Sensor* - a device that senses when articles being cleaned are relatively dry and automatically controls the drying cycle. Drying sensors include but are not limited to: infrared analyzers, float switches, and resistance probes. The device detects the concentration of synthetic solvents in the drying air or that the liquid solvent recovery rate is at a minimal rate. The drying sensor extends the drying cycle for a minimum time beyond the activation point to ensure dry articles (6 NYCRR 232.2).
- *Dry-to-Dry Machine* - a one-machine dry cleaning operation in which drying and washing are performed in the same machine (6 NYCRR 232.2).
- *Dry-to-Dry Vented Machine* - dry cleaning equipment in which washing, extraction, and drying are all performed in the same single unit and in which fresh air is introduced into the drum in the last step of the drying cycle and exhausted to the outdoor atmosphere, either directly or through a control device (second generation equipment) (6 NYCRR 232.2).
- *Emergency* - any situation arising from sudden and reasonably unforeseeable events beyond the control of the owner and/or operator of a facility, including acts of God, which situation requires immediate corrective action to restore normal operation and which causes the emission source to exceed a technology-based requirement under the permit or state-established emission limitations, due to unavoidable increases in emissions attributable to the situation. An emergency shall not include situations caused by improperly designed equipment, lack of preventive maintenance, careless or improper operation, or operator error (6 NYCRR 201-2.1).
- *Emergency Power Generating Stationary Internal Combustion Engine* - a stationary internal combustion engine that operates as a mechanical or electrical power source only when the usual supply of power is unavailable, and operates for no more than 500 hours per year. The 500 hours of annual operation for the engine include operation during emergency situations, routine maintenance, and routine exercising ('e.g.,' test firing the engine for one hour a week to ensure reliability). Stationary internal combustion engines used for peak shaving generation are not emergency power generating stationary internal combustion engines (6 NYCRR 227-2.2) [Added March 2004].
- *Emergency Vehicle* - a vehicle as defined in section 165 of the California Vehicle Code (see Table 1, section 200.9 of this Title) (6 NYCRR 218-1.2) [Added March 2003].
- *Emission* - the release of any air contaminant into the outdoor atmosphere (6 NYCRR 200.1).
- *Emission Cap* - a federally enforceable limit, term, or condition imposed by a permit, or through regulation, that restricts emissions for the purpose of avoiding an applicable requirement to which the stationary source would otherwise be subject, to establish enforceable emission reductions or to avoid the requirement to obtain a Title V facility permit. An emission cap can be facility-wide or limited to one or more emission units (6 NYCRR 201-2.1).
- *Emission Point* - any conduit, chimney, duct, vent, flue, stack, or opening of any kind through which air contaminants are emitted to the outdoor atmosphere (6 NYCRR 200.1).

- *Emission Rate Potential* - the maximum rate at which a specified air contaminant from an emission source would be emitted to the outdoor atmosphere in the absence of any control equipment. The emission rate potential of a specified air contaminant from an emission source is calculated by dividing the weight of such contaminant (expressed in pounds) that would be emitted to the outdoor atmosphere during maximum emission conditions in the absence of any control equipment, by the duration (expressed in hours) of such emissions. When an air contaminant is emitted for a period equal to or less than 1 h, the emission rate potential is the weight of the contaminant emitted in the absence of any control equipment, divided by 1 h, except that for any toxic air contaminant specified by the Commissioner, the duration of emissions used in calculating the emission rate potential may be less than 1 h. The maximum emission rate used for calculating the emission rate potential is not the emission rate during catastrophic or malfunction conditions (6 NYCRR 200.1).
- *Emission Test* - any method of collecting stack samples or samples of emissions from an air contamination source and analyzing such samples for air contaminants (6 NYCRR 200.1).
- *Environmental Rating* - an assigned rating indicated by the letter A, B, C, or D, that considers the potential environment effects of an air contamination source on its surroundings (6 NYCRR 200.1; 212.1).
- *Equivalent Closed-Loop Vapor Recovery System* - a device or combination of devices that achieves, in practice, a perc recovery performance equal to or exceeding that of refrigerated condensers (6 NYCRR 232.2).
- *Equivalent Control* - the use of alternate operational and/or equipment controls for the reduction of gasoline vapor emissions, that have been approved by the commissioner, such that the aggregate emissions of gasoline vapor from the facility do not exceed those from the application of defined reasonably available control technology (6 NYCRR 230.1).
- *Equivalent Opacity* - the opacity measured by methods acceptable to the Commissioner when a specific emission source is emitting air contaminants at, or less than, the mass emission standards, as corroborated by emission tests acceptable to the Commissioner (6 NYCRR 200.1).
- *Excluded VOC* - any of the compounds expressly excluded from the definition of volatile organic compound in section 200.1 of this title (6 NYCRR 228.2).
- *Exempt VOCs* - the organic compounds listed here do not constitute VOCs for purposes of determining permitting applicability, demonstrating compliance with a VOC emission limit or VOC content requirement, or calculating Operating Permit Program Fees. These compounds are considered to be VOCs for purposes of all VOC recordkeeping and emissions reporting requirements and are considered regulated air contaminants for the purposes of Subpart 202-2 Emission Reporting requirements (6 NYCRR 200.1) [Added March 2007]:
 - (1) tertiary butyl acetate.
- *Exhaust and/or Ventilation System* - any system that removes air contaminants from a process and transports them from their point of generation to the outdoor atmosphere (6 NYCRR 200.1).
- *Existing Facility* - any facility at which dry cleaning equipment was installed or operated prior to the effective date of this Part (6 NYCRR 232.2).
- *Facility* - all emission sources located at one or more adjacent or contiguous properties owned or operated by the same person, or persons under common control (6 NYCRR 200.1).
- *Faux Finishing Coating* - A coating labeled and formulated as a stain or a glaze to create artistic effects including, but not limited to, dirt, old age, smoke damage, and simulated marble and wood grain (6 NYCRR 205.2) [Added March 2006].
- *Federally Enforceable* - Federally enforceable means all limitations and conditions that are enforceable by the Department and the Administrator and citizens under the Act. Examples of federally enforceable limitations and conditions include but are not limited to (6 NYCRR 200.1):

1. emission standards, alternative emissions standards, alternative emission limitations, and equivalent emission limitations established pursuant to section 112 of the Act as amended in 1990;
 2. new source performance standards established pursuant to section 111 of the Act, and emission standards established pursuant to section 112 of the Act before it was amended in 1990;
 3. all terms and conditions in a Title V permit, including any provisions that limit a source's potential to emit, unless expressly designated as not federally enforceable;
 4. all limitations and requirements under the applicable implementation plan (SIP) for the state of New York;
 5. limitations and conditions that are part of a federal construction permit issued under 40 CFR 52.21 or any construction permit issued under regulations approved by the EPA in accordance with 40 CFR 51;
 6. limitations and conditions in a permit issued under this Chapter that are designed to limit a facility's potential to emit for the purpose of avoiding an applicable requirement to which the facility would otherwise be subject.
- *Filter Muck* - the residue from a filter using loose diatomaceous earth, which must be replaced periodically (6 NYCRR 232.2).
 - *Final Distribution Facility* - the stationary facility of a distributor from which gasoline is supplied to a retail outlet or wholesale purchaser-consumer's facility, or the portable container used to transport gasoline if an oxygenate has or will be added to such portable container prior to delivery to a retail outlet or wholesale purchaser-consumer's facility (6 NYCRR 225-3.2).
 - *Fire-Resistive Coating* - An opaque coating labeled and formulated to protect the structural integrity by increasing the fire endurance of interior or exterior steel and other structural materials, that has been fire tested and rated by a testing agency and approved by building code officials for use in bringing assemblies of structural materials into compliance with federal, state, and local building code requirements. The fire-resistive coating and the testing agency must be approved by building code officials. The fire-resistive coating shall be tested in accordance with American Society for Testing and Materials (ASTM) Designation E 119-00a (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
 - *Fire-Retardant Coating* - A coating labeled and formulated to retard ignition and flame spread that has been tested and rated by a testing agency approved by building code officials for use in bringing building and construction materials into compliance with Federal, State, and local building code requirements. The fire-retardant coating and the testing agency must be approved by building code officials. The fire-retardant coating shall be tested in accordance with ASTM Designation E 84-01 (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
 - *First Generation Equipment* - transfer machines where cleaning and drying (reclaiming) take place in separate machines with the manual transfer of articles from one machine to another (6 NYCRR 232.2).
 - *Flat Coating* - A coating that is not defined under any other definition in this rule and that registers gloss less than 15 on an 85-degree meter or less than 5 on a 60-degree meter according to ASTM Designation D 523-89 (1999) (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
 - *Flexographic Printing Process* - application of words, designs, and pictures to a substrate by means of a printing technique in which the image to be applied is raised above the nonimage area and the image carrier is made of a rubber or other elastomeric materials (6 NYCRR 234.1).
 - *Floor Coating* - An opaque coating that is labeled and formulated for application to flooring, including, but not limited to, decks, porches, steps, and other horizontal surfaces which may be subjected to foot traffic (6 NYCRR 205.2) [Added March 2006].
 - *Flow Coating* - A coating labeled and formulated exclusively for use to maintain the protective coating systems present on utility transformer units (6 NYCRR 205.2) [Added March 2006].

- *Fossil Fuel Burning Equipment* - any furnace, steam, hot-air or hot-water generating equipment or any other device, exclusive of process equipment in which the fuel burned is coal, oil, gas, or other fossil fuels (6 NYCRR 200.1).
- *Form-Release Compound* - A coating labeled and formulated for application to a concrete form to prevent the freshly poured concrete from bonding to the form. The form may consist of wood, metal or some material other than concrete (6 NYCRR 205.2) [Added March 2006].
- *Fourth Generation Equipment* - a primary closed-loop refrigerated dry cleaning machine that has a "secondary control system" (e.g., closed-loop refrigerated condenser with a drying sensor and an integral carbon adsorber) (6 NYCRR 232.2).
- *Freeboard Height* - Distance from the top of the vapor zone to the top of the degreaser tank. On cold cleaners, it is the distance from liquid level to lip of tank (6 NYCRR 226.1) [Added March 2004].
- *Freeboard Ratio* - Freeboard height divided by the interior width of the degreaser tank (6 NYCRR 226.1) [Added March 2004].
- *Fuel* - solid, liquid, or gaseous combustible material (6 NYCRR 200.1).
- *Fuel* - all fuels subject to any provision of 6 NYCRR 225-3 (ie. gasoline) (6 NYCRR 239-2) [Added March 2003].
- *Fugitive Emissions* - emissions of air contaminants that could not reasonably pass through a stack, vent, chimney or other functionally equivalent opening (6 NYCRR 200.1).
- *Furnace* - any device (excluding internal combustion engines and gas turbines) that combusts fossil fuel and/or wood for any purpose and whose emissions to the outside atmosphere only include the products of combustion from fossil fuels and/or wood (6 NYCRR 201-2.1).
- *Garbage* - the animal and vegetable waste resulting from the handling, preparation, cooking, and serving of food (6 NYCRR 200.1).
- *Gasoline* - a volatile liquid mixture containing hydrocarbons or a blend of this mixture with one or more oxygen-containing, ashless organic compounds, such as alcohols or ethers, that is suitable for use in motor vehicles with spark-ignition, internal combustion engines and which is commonly or commercially known or sold as gasoline (6 NYCRR 225-3.2).
- *General Exhaust Ventilation System* - a mechanical exhaust ventilation system consisting of fresh air makeup inlets and one or more exhaust fans in a dry cleaning facility. This type of system would commonly be used to exhaust a dry cleaning workroom or a room enclosure (6 NYCRR 232.2).
- *Graphic Arts* - packaging rotogravure, publication rotogravure, flexographic, offset lithographic, and screen printing processes (6 NYCRR 234.1).
- *Graphic Arts Coating or Sign Paint* - A coating labeled and formulated for hand-application using brush or roller techniques to indoor and outdoor signs (excluding structural components) and murals including letter enamels, poster colors, copy blockers, and bulletin enamels (6 NYCRR 205.2) [Added March 2006].
- *Heat Input* - the heat released (exothermic heat of chemical reaction) due to the combustion of fuel. It includes only the weight rate (e.g., pounds/hour) of the fuel fired multiplied by the caloric value of the fuel (6 NYCRR 200.1).
- *Heavy-Duty Engine* - an engine which is used to propel a heavy-duty vehicle (6 NYCRR 218-1.2) [Added March 2003].

- *Heavy-Duty Vehicle* - any motor vehicle having a manufacturer's gross vehicle weight rating greater than 6,000 pounds, except passenger cars (6 NYCRR 218-1.2) [Added March 2003].
- *High Temperature Coating* - A high performance coating labeled and formulated for application to substrates exposed continuously or intermittently to temperatures above 204°C (400°F) (6 NYCRR 205.2) [Added March 2006].
- *Hospital* - any facility which has an organized medical staff, maintains at least six inpatient beds, and where the primary function of the institution is to provide diagnostic and therapeutic patient services and continuous nursing care primarily to human inpatients who are not related and who stay on average in excess of 24 h per admission. This definition does not include facilities maintained for the sole purpose of providing nursing or convalescent care to human patients who generally are not acutely ill but require continuing medical supervision (6 NYCRR 219-1.1) [Added January 1999].
- *Hospital/Medical/Infectious Waste Incinerator* or *HMIWI* or *HMIWI Unit* - any device that combusts any amount of hospital waste and/or medical/infectious waste (6 NYCRR 219-1.1) [Added January 1999].
- *Hospital/Medical/Infectious Waste Incinerator Operator* or *HMIWI Operator* - any person who operates, controls or supervises the day-to-day operation of an HMIWI (6 NYCRR 219-1.1) [Added January 1999].
- *Hospital Waste* - discards generated at a hospital, except unused items returned to the manufacturer. The definition of hospital waste does not include human corpses, remains, and anatomical parts that are intended for interment or cremation (6 NYCRR 219-1.1) [Added January 1999].
- *Impacted Immersion Coating* - A high performance maintenance coating formulated and recommended for application to steel structures subject to immersion in turbulent, debris-laden water. These coatings are specifically resistant to high-energy impact damage by floating ice or debris (6 NYCRR 205.2) [Added March 2006].
- *Incinerator* -
 1. Any structure or furnace in which combustion takes place and refuse is used as a fuel, alone or in conjunction with fossil fuel (6 NYCRR 200.1).
 2. Any structure or furnace in which combustion takes place and type 0, 1, 2, 3, or 4 refuse is used as fuel, alone or in conjunction with fossil fuel (6 NYCRR 219-1.1) [Added January 1999].
- *Inboard Engine* - a 4-stroke spark ignition marine engine not used in a personal watercraft that is designed such that the propeller shaft penetrates the hull of the marine watercraft while the engine and the remainder of the drive unit is internal to the hull of the marine watercraft (NYCRR 210-1.2) [Added March 2004].
- *Indirect Source of Air Contamination* or *Indirect Source* - a facility, structure, or installation the construction or operation of which results or may result directly or indirectly in associated vehicular movements which contribute to ambient concentrations of any air contaminant for which there is an ambient air quality standard, including:
 1. highways and roads on which the predicted annual average of daily traffic volume within 10 yr of completion of construction may exceed 20,000 vehicles, or where the modification of any existing section of road or highway which may increase the annual average of daily traffic volume within 10 yr of completion of modification by more than 10,000 vehicles
 2. parking areas (6 NYCRR 203.2).
- *Industrial Maintenance Coating* - A high performance architectural coating, including primers, sealers, undercoaters, intermediate coats, and topcoats, formulated for application to substrates exposed to one or more of the following extreme environmental conditions listed in paragraphs (1)-(5) of this subdivision and labeled as specified in section 205.4(d) of this Part (6 NYCRR 205.2) [Added March 2006]:

1. immersion in water, wastewater, or chemical solutions (aqueous and non-aqueous solutions), or chronic exposures of interior surfaces to moisture condensation;
 2. acute or chronic exposure to corrosive, caustic or acidic agents, or to chemicals, chemical fumes, or chemical mixtures or solutions;
 3. repeated exposure to temperatures above 121°C (250°F);
 4. repeated (frequent) heavy abrasion, including mechanical wear and repeated (frequent) scrubbing with industrial solvents, cleansers, or scouring agents; or
 5. exterior exposure of metal structures and structural components.
- *Iron and/or Steel Processes* - processes commonly associated with or necessary to production of iron and steel, excluding ferro-alloys but including, but not limited to, the following:
 1. materials handling systems, including but not limited to systems for handling iron ore, ore pallets, coal, limestone, fluxes, scrap steel sinter, coke, steel alloying ingredients, slag, and dust
 2. blast furnaces for making iron
 3. sintering processes such as agglomeration including sintering and handling of agglomerated materials but excluding iron ore beneficiating processes and processes occurring prior to iron ore agglomeration, such as washing, screening, crushing, blending and materials handling
 4. basic oxygen furnaces, open hearths, and electric furnaces
 5. iron and/or steel furnaces, except furnaces in jobbing foundries
 6. molten material transfer and processing operations, including but not limited to, teeming, tapping, reladling, and casting
 7. continuous casting operations
 8. scarfing and other surface defect removal operations, except those in jobbing foundries
 9. scrap preparation, including scrap melting and burning operations
 10. molten metal desulfurization operations
 11. raw material drying systems
 12. process furnaces, including soaking pits, annealing furnaces, reheating furnaces, and other process furnaces using direct heat transfer (6 NYCRR 200.1).
 - *Lacquer* - A clear or opaque wood coating, including clear lacquer sanding sealers, formulated with cellulosic or synthetic resins to dry by evaporation without chemical reaction and to provide a solid, protective film (6 NYCRR 205.2) [Added March 2006].
 - *Large Boiler* - a boiler with maximum heat input capacity greater than 100 million British thermal units (MBtu)/h, and equal to or less than 250 MBtu/h (6 NYCRR 227-2.2) [Revised March 2004].
 - *Lean Burn Internal Combustion Engine* - any stationary internal combustion engine that is operated so that the amount of oxygen in the engine exhaust is 1.0 percent or more, by volume on a dry basis (6 NYCRR 227-2.2) [Revised March 2004].
 - *Light-Duty Truck (LDT)* - any affected motor vehicle:
 1. that is rated in the weight range greater than 6,000 lbs. GVWR but less than or equal to 8,500 lbs. GVWR and has a basic vehicle frontal area of 45 square ft or less; and
 2. that meets any of the following criteria:
 - a. designed primarily for purposes of transportation of property or is a derivation of such a vehicle.
 - b. designed primarily for transportation of persons and has a capacity of more than twelve persons.
 - c. equipped with special features enabling off-street or off-highway operation and use (6 NYCRR 217-1.1) [Added January 1998].
 - *Light-Duty Truck* - light-duty truck as defined in California Code of Regulations, title 13, section 1900 (see Table 1, section 200.9 of this title) (6 NYCRR 218-1.2) [Added March 2003; Revised March 2006].
 - *Light-Duty Vehicle (LDV)* - a passenger car or passenger car capable of seating 12 or fewer passengers (6 NYCRR 217-1.1) [Added January 1998; Revised March 2003].

- *Liquid Leak* - a leak of liquid containing perc of more than one drop every three minutes (6 NYCRR 232.2).
- *Local Exhaust Ventilation System* - a mechanical exhaust ventilation system connected directly to a dry cleaning machine or other related dry cleaning equipment. For example, the exhaust system on a door fan for a third generation machine constitutes a local exhaust ventilation system (6 NYCRR 232.2).
- *Low NOx Burner* - a burner designed to reduce flame turbulence by the mixing of fuel and air and by establishing fuel-rich zones for initial combustion, thereby reducing the formation of NO_x. (6 NYCRR 227-2.2) [Added March 2004].
- *Lowest Achievable Emission Rate (LAER)* - the most stringent emission limitation achieved in practice, or which can reasonably be expected to occur in practice for a category of emission sources taking into consideration each air contaminant which must be controlled. In no event shall the application of this term permit a proposed new source or modification to emit any air contaminant in excess of the amount permitted under any applicable emission standard established under 6 NYCRR or 40 CFR (6 NYCRR 200.1).
- *Lower Orange County Metropolitan Area* - the area including the towns of Blooming Grove, Chester, Highlands, Monroe, Tuxedo, Warwick, and Woodbury (6 NYCRR 200.1 and 212.1).
- *Low Solids Coating* - A coating containing 0.12 kilogram or less of solids per liter (one pound or less of solids per gallon) of coating material (6 NYCRR 205.2) [Added March 2006].
- *L.P. Gas* - a petroleum hydrocarbon, such as propane, butane or isobutane which is normally a gas but which can be compressed and condensed to a liquid (6 NYCRR 200.1).
- *Magnesite Cement Coating* - A coating labeled and formulated for application to magnesite cement decking to protect the magnesite cement substrate from erosion by water (6 NYCRR 205.2) [Added March 2006].
- *Major Source* - a dry cleaning facility that emits or has the potential to emit more than 9.1 megagrams per yr (10 tons per year) of perc to the atmosphere. In lieu of measuring a facility's potential to emit perc or determining a facility's potential to emit perc, a dry cleaning facility is a major source if: (1) it includes only dry-to-dry machine(s) and has a total yearly perc consumption greater than 8,000 liters (2,100 gallons) as determined according to section 232.12(b) of this Part; or, (2) it includes only transfer machine system(s) or both dry-to-dry machine(s) and transfer machine system(s) and has a total yearly perc consumption greater than 6,800 liters (1,800 gallons) as determined according to section 232.12(b) of this Part (6 NYCRR 232.2).
- *Major Stationary Source or Major Source* - any stationary source or any group of stationary sources, any source or any group of sources, or any facility or any group of facilities, that are located on one or more contiguous or adjacent properties and are under common control, belonging to a single major industrial grouping and that are described in subparagraph (i), (ii), (iii), (iv), or (v) of this paragraph. For the purposes of this definition, a stationary source, source, or facility or group of stationary sources, sources, or facilities shall be considered part of a single industrial grouping if all of the air pollutant or air contaminant emitting activities at such stationary source, source, or facility, or any group of stationary sources, sources, or facilities on contiguous or adjacent properties belong to the same major group (i.e., all have the same two-digit code), as described in the Standard Industrial Classification Manual, 1987. Stand alone or common wall residential housing units including compatible commercial activities, which are not regulated by other applicable requirements, where the potential to emit for individual associated combustion or emission sources are below major stationary source, major source, or major facility applicability thresholds (notwithstanding that the sum of these individual combustion or emission sources could exceed major stationary sources, major source, or major facility applicability thresholds) shall not be considered a major stationary source, major source, or major facility. (6 NYCRR 201-2.1) [Revised March 2009]:
 1. Except as otherwise expressly provided in this paragraph, a stationary source, source, or facility that directly emits or has the potential to emit, 100 tpy or more of any air pollutant or air contaminant regulated under the Act (including any major source or facility which emits only fugitive emissions, of any such pollutant, as determined through regulation by the administrator). With the exception of

emissions of hazardous air pollutants, fugitive emissions shall not be considered in determining whether a facility is major unless it belongs to one of the source categories identified in subparagraph (iii) of this paragraph.

2. For hazardous air pollutants other than radionuclides, a stationary source, source, or facility that emits or has the potential to emit, in the aggregate, 10 tons per year (tpy) or more of any hazardous air pollutant as defined in Part 200 of this Title (including any fugitive emissions of such pollutant), 25 tpy or more of any combination of such hazardous air pollutants (including any fugitive emissions of such pollutants), or such lesser quantity as the administrator may establish by rule. The administrator shall specify the meaning of radionuclides for major stationary sources, major sources, or major facilities by rule. Notwithstanding the preceding sentence, emissions from any oil or gas exploration or oil and gas production well (with its associated equipment) and the emissions from any pipeline compressor station or pump station shall not be aggregated with emissions from other units, whether or not such units are in a contiguous area or under common control, to determine whether such units or stations are major stationary sources, major sources, or major facilities.
3. stationary source, source, or facility that belongs to one of the following source categories and directly emits or has the potential to emit, 100 tpy or more of any air pollutant or air contaminant regulated under the Act (including the fugitive emissions of any such pollutant or contaminant):
 - a. coal cleaning plants (with thermal dryers)
 - b. kraft pulp mills
 - c. portland cement plants
 - d. primary zinc smelters
 - e. iron and steel mills
 - f. primary aluminum ore reduction plants
 - g. primary copper smelters
 - h. municipal incinerators capable of charging more than 50 tons of refuse per day
 - i. hydrofluoric, sulfuric, or nitric acid plants
 - j. petroleum refineries
 - k. lime plants
 - l. phosphate rock processing plants
 - m. coke oven batteries
 - n. sulfur recovery plants
 - o. carbon black plants (furnace process)
 - p. primary lead smelters
 - q. fuel conversion plants
 - r. sintering plants
 - s. secondary metal production plants
 - t. chemical process plants
 - u. fossil-fuel boilers (or combination thereof) totaling more than 250 million British Thermal Units per h heat input
 - v. petroleum storage and transfer units with a total storage capacity exceeding 300,000 barrels
 - w. taconite ore processing plants
 - x. glass fiber processing plants
 - y. charcoal production plants
 - z. fossil-fuel-fired steam electric plants of more than 250 million British Thermal Units per h heat input
 - aa. all other source categories regulated by a standard under Sections 111, for which EPA has completed a rulemaking proceeding under 302(j) of the act or section 112 of the act, but only with respect to those air pollutants that have been regulated for that category as of the effective date of this Part
 - bb. municipal solid waste landfills.
4. A stationary source, source, or facility that is located in a nonattainment area or an attainment area of the state within the ozone transport region where the stationary source, source, or facility potential to emit equals or exceeds the emissions thresholds (in tpy) identified in clauses (a), (b), (c), (d), or (e) of this subparagraph (including fugitive emissions if the stationary source, source, or facility belongs to one of the source categories listed in subparagraph (iii) of this Paragraph):

- a. For areas classified as marginal or moderate ozone nonattainment, any stationary source, source, or facility with the potential to emit 100 tpy or more of oxides of nitrogen (NO_x) or 50 tpy or more of volatile organic compounds (VOC)
 - b. For areas classified as severe ozone nonattainment, any stationary source, source, or facility with the potential to emit 25 tpy or more of NO_x or VOC
 - c. For attainment areas of the state within the ozone transport region, any stationary source, source, or facility with the potential to emit 100 tpy or more of NO_x or 50 tpy or more of VOC
 - d. For areas classified as moderate PM-10 nonattainment, any stationary source, source, or facility with the potential to emit 100 tpy or more of PM-10
 - e. For PM-2.5 nonattainment areas, any stationary source, source, or facility with the potential to emit 100 tpy or more of PM-2.5.
5. For purposes of determining the applicability of Part 231 with respect to Prevention of Significant Deterioration (PSD) requirements only, a stationary source, source, or facility located in an attainment area of the state where the stationary source, source, or facility potential to emit equals or exceeds 250 tons per year of any attainment contaminant regulated under the Act; or equals or exceeds 100 tons per year of any attainment contaminant regulated under the Act (including fugitive emissions) if the stationary source, source, or facility belongs to one of the source categories listed in subparagraph (iii) of this paragraph.
- *Malfunction* - any sudden and unavoidable failure of an air cleaning device or air contamination source to operate in compliance with all applicable Parts of this Title, and shall not include failures that are caused entirely or partially by poor maintenance, careless operation, or other preventable condition (6 NYCRR 201-2.1).
 - *Manufacturer* - any person who imports, manufactures, assembles, produces, packages, repackages, or relabels a portable fuel container or spout or both portable fuel container and spout (6 NYCRR 239-2) [Added March 2003].
 - *Mastic Texture Coating* - A coating labeled and formulated to cover holes and minor cracks and conceal surface irregularities, which is applied in a single coat of at least 10 mils (0.010 inch) dry film thickness (6 NYCRR 205.2) [Added March 2006].
 - *Maximum Operating Heat Input* - the maximum heat input in million British thermal units per h at which a stationary combustion installation is anticipated to be operated or at which it actually has been operated. This heat input will be the permissible operating limit as specified on a permit to construct or certificate to operate (6 NYCRR 200.1).
 - *Medical/Infectious Waste* - any waste generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals that is listed below (6 NYCRR 219-1.1) [Added January 1999]:
 1. Cultures and stocks of infectious agents and associated biologicals, including: cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines; and culture dishes and devices used to transfer, inoculate, and mix cultures.
 2. Human pathological waste, including tissues, organs, and body parts and body fluids that are removed during surgery or autopsy, or other medical procedures, and specimens of body fluids and their containers.
 3. Human blood and blood products including:
 - a. Liquid waste human blood;
 - b. Products of blood;
 - c. Items saturated and/or dripping with human blood; or
 - d. Items that were saturated and/or dripping with human blood that are now caked with dried human blood; including serum, plasma, and other blood components, and their containers, which were used or intended for use in either patient care, testing and laboratory analysis or the development of pharmaceuticals. Intravenous bags are also included in this category.

4. Sharps that have been used in animal or human patient care or treatment or in medical, research, or industrial laboratories, including hypodermic needles, syringes (with or without the attached needle), pasteur pipettes, scalpel blades, blood vials, needles with attached tubing, and culture dishes (regardless of presence of infectious agents). Also included are other types of broken or unbroken glassware that were in contact with infectious agents, such as used slides or cover slips.
5. Animal waste including contaminated animal carcasses, body parts, and bedding of animals that were known to have been exposed to infectious agents during research (including research in veterinary hospitals), production of biologicals or testing of pharmaceuticals.
6. Isolation wastes including biological waste and discarded materials contaminated with blood, excretions, exudates, or secretions from humans who are isolated to protect others from certain highly communicable diseases, or isolated animals known to be infected with highly communicable diseases.
7. Unused sharps including the following unused, discarded sharps: hypodermic needles, suture needles, syringes, and scalpel blades.

The definition of medical/infectious waste does not include hazardous waste identified or listed under the regulations in part 373 of this Title; household waste, as defined in part 360 of this Title; ash from incineration of medical/infectious waste, once the incineration process has been completed; human corpses, remains, and anatomical parts that are intended for interment or cremation; and domestic sewage materials.

- *Medium-Duty Vehicle* - medium-duty vehicle as defined in California Code of Regulations, title 13, section 1900 (see Table 1, section 200.9 of this title (6 NYCRR 218-1.2) [Added March 2003; Revised March 2006].
- *Metallic Pigmented Coating* - A coating containing at least 48 grams of elemental metallic pigment per liter of coating as applied (0.4 pounds per gallon), when tested in accordance with South Coast Air Quality Management District Method 318-95 (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
- *Mid-size Boiler* - a boiler with maximum heat input capacity greater than 50 MBtu/h and equal to or less than 100 MBtu/h (6 NYCRR 227-2.2) [Revised March 2004].
- *Military Tactical Vehicles and Equipment* - those vehicles defined by California Code of Regulations, Title 13, section 1905 (see Table 1, section 200.9 of this Title) (6 NYCRR 218-1.2) [Added March 2003].
- *Mixed-use Facility* - a facility that is co-located (6 NYCRR 232.2).
- *Modification* - any physical change, or change in the method of operation of an incinerator, stationary combustion installation or process which(6 NYCRR 200.1):
 1. increases the hourly emission rate, emission concentration or emission opacity of any air contaminant
 2. involves the installation or alteration of any air cleaning installation, air cleaning device or control equipment
 3. involves conversion of fuel used in any emission source to a fuel with a higher ash content than the fuel used prior to the change
 4. involves the alteration of any furnace or other physical changes to allow burning or refuse or refuse-derived fuel with fossil fuel
 5. results in the emission of any air pollutant not previously emitted or authorized under the permit.

(NOTE: Routine maintenance, repair, and replacement of original equipment or parts thereof are not considered physical changes. An increase or decrease in the hours of operation is not considered a change in the method of operation if the total emissions do not cause air pollution or contravention of any applicable ambient air quality standard, and the hours of operation are not restricted through a condition of a permit or certificate issued for the air contamination source.(NOTE: A physical change or a change in the method of operation does not include the use of an alternative fuel or raw material which:

1. The facility or emission source was capable of accommodating before 6 Jan 1975, unless such change would be prohibited under any federally enforceable permit condition which was established after 6 Jan 1975 pursuant to 40 CFR Part 52.21; or

2. The facility or emission source is approved to use under any permit issued under 40 CFR Part 52.21.)
- *Motor Vehicle* - a vehicle that can travel on land and which is propelled by means other than human or animal muscular power, except such vehicles which run only on tracks or rails (6 NYCRR 200.1).
 - *Muck Cooker* - a device for heating filter muck to drive off perc vapors for reclaiming (6 NYCRR 232.2).
 - *Multi-Color Coating* - A coating that is packaged in a single container and exhibits more than one color when applied in a single coat (6 NYCRR 205.2) [Added March 2006].
 - *Municipal Solid Waste* - all materials or substances discarded from single and multiple family dwellings, and other residential sources; similar types of materials from institutional, commercial, and industrial sources; concurrently incinerated sewage sludge but not hazardous waste as defined in 6 NYCRR Part 371 (6 NYCRR 200.1).
 - *Municipal Solid Waste Incineration Facility* - a facility that is owned, operated, or utilized by, or under contract with, a municipality or political subdivision and which utilizes high temperature thermal destruction technologies, including combustion for the recovery of thermal value or for the disposal of municipal solid waste.(NOTE: A municipal solid waste incineration facility may also be a regulated medical waste incineration facility.) (6 NYCRR 200.1).
 - *New Facility* - a facility that was not used for the operation of any dry cleaning equipment prior to the effective date of this Part (6 NYCRR 232.2).
 - *New York City Metropolitan Area* - all of the city of New York and Nassau, Suffolk, Westchester, and Rockland Counties (6 NYCRR 200.1 and 212.2).
 - *New York Metropolitan Enhanced Inspection and Maintenance Region* - the region comprising the counties of Suffolk (except Fisher's Island), Nassau, Kings, Queens, Richmond, New York, Bronx, Westchester, and Rockland (6 NYCRR 217-1.1).
 - *Nominal Capacity* - the volume indicated by the manufacturer that represents the maximum recommended filling level (6 NYCRR 239-2) [Added March 2003].
 - *Nonattainment Area* - any area of the state not meeting a National Ambient Air Quality Standard (NAAQS) for a specific air contaminant. Nonattainment areas in New York State are as follows (6 NYCRR 200.1) [Revised April 2006; Revised March 2008]:
 1. Reserved.
 2. Areas designated as "Nonattainment" for the Fine Particulate (PM_{2.5}) NAAQS.
 - i. The New York--N. New Jersey--Long Island, NY-NJ-CT-PA area consisting of Bronx, Kings, Nassau, New York, Orange, Queens, Richmond, Rockland, Suffolk and Westchester Counties.
 3. Areas designated as "Nonattainment" for the 1-Hour Ozone NAAQS.
 - i. Nonattainment areas classified as "Severe".
 - a. The area consisting of the New York City Metropolitan Area and the Lower Orange County Metropolitan Area.
 - ii. Nonattainment areas classified as "Moderate".
 - a. The Lower Hudson Valley area consisting of Putnam and Dutchess Counties, and all of Orange County except the Lower Orange County Metropolitan Area.
 - iii. Nonattainment areas classified as "Marginal".
 - a. The Capital District area consisting of Saratoga, Montgomery, Schenectady, Albany, Rensselaer and Greene Counties.
 - b. The portion of Essex County surrounding Whiteface Mountain above an elevation of 4,500 feet.
 - c. The area consisting of all of Jefferson County.
 - d. The Niagara Frontier area consisting of Niagara and Erie Counties.

4. Areas designated as "Nonattainment" for the PM₁₀ NAAQS (Annual NAAQS revoked by EPA effective December 17, 2006).
- i. The area consisting of all of New York County.
- *Nonconforming Gasoline* - any gasoline that does not conform to the requirements of section 225-3.3 or section 225-3.4 of this Subpart (6 NYCRR 225-3.2).
 - *Nonflat Coating* - A coating that is not defined under any other definition in this rule and registers a gloss of 15 or greater on an 85-degree meter and 5 or greater on a 60-degree meter according to ASTM Designation D 523-89 (1999) (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
 - *Nonflat-High Gloss Coating* - A nonflat coating that registers a gloss of 70 or above on a 60-degree meter according to ASTM designation D 523-89 (1999) (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
 - *Nonroad Engine* – (6 NYCRR 200.1) [Added January 1999]:
 1. Except as specified in paragraph (2) of this subdivision, a nonroad engine is an internal combustion engine:
 - a. in or on a piece of equipment that is self-propelled or serves a dual purpose by both propelling itself and performing another function (such as garden tractors, off-highway mobile cranes and bulldozers); or
 - b. in or on a piece of equipment that is intended to be propelled while performing its function (such as lawnmowers and string trimmers); or
 - c. that, by itself or in or on a piece of equipment, is portable or transportable, meaning designed to be and capable of being carried or moved from one location to another. Indicators of transportability include, but are not limited to, wheels, skids, carrying handles, dolly, trailer, or platform.
 2. An internal combustion engine is not a nonroad engine if:
 - a. the engine is used to propel a motor vehicle or a vehicle used solely for competition, or is subject to standards promulgated under section 202 of the Act; or
 - b. the engine is regulated by a Federal New Source Performance Standard promulgated under section 111 of the Act; or
 - c. the engine otherwise included in subparagraph (1)(iii) of this definition remains or will remain at a location for more than 12 consecutive months or a shorter period of time for an engine located at a seasonal source. A location is any single site at a building, structure, facility, or installation. Any engine (or engines) that replaces an engine at a location and that is intended to perform the same or similar function as the engine replaced will be included in calculating the consecutive time period. An engine located at a seasonal source is an engine that remains at a seasonal source during the full annual operating period of the seasonal source. A seasonal source is a stationary source that remains in a single location on a permanent basis (i.e., at least two years) and that operates at that single location approximately three months (or more) each year. This paragraph does not apply to an engine after the engine is removed from the location.
 - *Nuclear Coating* - A protective coating formulated and recommended to seal porous surfaces such as steel (or concrete) that otherwise would be subject to intrusion by radioactive materials. These coatings must be resistant to long-term (service life) cumulative radiation exposure (ASTM Method D 4082-02, see Table 1, section 200.9 of this Title), relatively easy to decontaminate, and resistant to various chemicals to which the coatings are likely to be exposed ASTM Method D 3912-95 (2001) (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
 - *Offset Lithographic Printing Process* - application of words, designs, and pictures to a substrate by means of planographic printing technique that involves the use of a lithographic plate, where the image and nonimage areas are chemically maintained from which the inked image is transferred to an intermediate surface called a blanket that, in turn, transfers the inked image to the substrate (6 NYCRR 234.1).

- *Onsite Incinerator* - any incinerator except one used to burn refuse that is collected from more than 100 different premises and brought to the incinerator site by truck (6 NYCRR 200.1).
- *Opacity* - the degree to which emissions other than water reduce the transmission of light and obscure the view of an object in the background (6 NYCRR 200.1).
- *Open Fire* -
 1. any outdoor fire or outdoor smoke producing process from which the air contaminants are emitted directly into the outdoor atmosphere (6 NYCRR 200.1).
 2. any outdoor fire or outdoor smoke producing process from which air contaminants are emitted directly into the outdoor atmosphere. Open fires include burning in barrels or modifications thereof. Open fires do not include burning in outdoor furnaces or boilers that are used to heat buildings when the devices are actually used for such purpose (6 NYCRR 215.1) [Added March 2010].
- *Open-Top Vapor Degreasing* - process of solvent metal cleaning by condensing hot solvent vapor on the colder metal parts (6 NYCRR 226.1) [Added March 2004].
- *Openings* - any window, door or air intake (6 NYCRR 232.2).
- *Operator* - any person who leases, operates, controls, or supervises a facility at which air contaminants are emitted (6 NYCRR 200.1).
- *Outboard Engine* - a spark-ignition marine engine that, when properly mounted on a marine water craft in the position to operate, houses the engine and drive unit external to the hull of the marine water craft (6 NYCRR 239-2) [Added March 2003].
- *Outdoor Atmosphere* - the atmosphere outside of and surrounding all buildings, structures, stacks, or exterior ducts (6 NYCRR 200.1).
- *Overall Removal Efficiency* - the total reduction of volatile organic compound emissions considering the efficiency of both the capture system and of the subsequent destruction and/or removal of these air contaminants by the control equipment prior to their release into the atmosphere (6 NYCRR 212.1).
- *Owner* - any person who has legal or equitable title to an emission source, or of the control equipment at such source (6 NYCRR 200.1).
- *Oxides of Nitrogen (Also Nitrogen Oxides or NO_x)* - all oxides of nitrogen, except nitrous oxide, expressed as nitrogen dioxide (6 NYCRR 200.1).
- *Oxygen Content* - the ratio of the weight of oxygen in a unit of gasoline to the total weight of the gasoline multiplied by 100, determined through the method specified in section 225-3.5 of this Subpart (6 NYCRR 225-3.2).
- *Oxygenate* - any substance which, when blended into gasoline, increases the amount of oxygen in that gasoline blend and which is allowed to be used as a gasoline additive pursuant to 42 U.S.C. 7545 (6 NYCRR 225-3.2).
- *Oxygenated Gasoline* - gasoline to which at least one oxygenate has been added and which complies with the requirements of section 225-3.4 of this Subpart (6 NYCRR 225-3.2).
- *Ozone Transport Region* - the area that includes all of New York State and the states of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, Pennsylvania, Rhode Island, Vermont, and the consolidated metropolitan statistical area that includes the District of Columbia and northern Virginia (6 NYCRR 200.1).

- *Packaging Rotogravure Printing Process* - rotogravure printing upon paper, paper board, metal foil, plastic film and other substrates which are, in subsequent operations, formed into either wallpaper or packaging products and labels for articles to be sold (6 NYCRR 234.1).
- *Parking Area* - a state or Federally owned parking facility, including a lot or garage, which is located in New York County, south of 60th Street (6 NYCRR 203.2).
- *Particulates* - any air or gasborne material, except water, which exists as a liquid or solid. The determination of the quantity of particulates present in a stack shall be determined in accordance with emission testing methods acceptable to the Commissioner (6 NYCRR 200.1).
- *Peak Shaving Generation* - the practice of utilizing on-site generating capacity for use at a facility (excluding emergency generation when the usual sources of heat, power, and lighting are temporarily unavailable) at the request of the primary electricity supplier (6 NYCRR 200.1) [Revised January 2002; Revised March 2006].
- *Peaking Combustion Turbine* - a combustion turbine used intermittently to produce energy during periods of extremely high (i.e. peak) power demand (6 NYCRR 227-2.2) [Revised March 2004].
- *Penetrating Prime Coat* - an application of low viscosity asphalt to an absorbent surface in order to prepare it for paving with an asphalt concrete (6 NYCRR 211.1).
- *Perceptible Leak* - any perc vapor or liquid leaks that are obvious from the odor of perc, pools or droplets of perc or the detection of gas flow by passing a finger over the surface of the equipment, or as detected by an appropriate portable monitoring instrument (6 NYCRR 232.2).
- *Perc* - a colorless volatile chlorinated hydrocarbon. Perc is also known as perchloroethylene, tetrachloroethylene, tetrachloroethene, and PCE. The chemical formula for perc is Cl(2)C:CCl(2). The CAS registry number for perc is 00127-18-4 (6 NYCRR 232.2).
- *Permeation* - the process by which individual fuel molecules may penetrate the walls and various assembly components of a portable fuel container directly to the outside ambient air (6 NYCRR 239-2) [Added March 2003].
- *Permissible Emission Rate* - the maximum rate at which air contaminants are allowed to be emitted to the outdoor atmosphere. This includes (6 NYCRR 200.1):
 1. an applicable emission limitation in this subchapter
 2. any performance standard contained in title 40 of the Code of Federal Regulations
 3. any emission limitation specified by the Commissioner as a condition of a permit to construct and/or certificate to operate.
- *Person* - any individual, public or private corporation, political subdivision, government agency, department or bureau of the state, municipality, industry, copartnership, association, firm, trust, estate, or any other legal entity whatsoever (6 NYCRR 200.1 and 6 NYCRR 239-2).
- *Personal Watercraft Engine* - a spark-ignition marine engine that does not meet the definition of outboard engine, inboard engine or sterndrive engine, except that the Executive Officer may, in his or her discretion classify a personal watercraft engine as an inboard or sterndrive engine if it is comparable in technology and emissions to an inboard or sterndrive engine (6 NYCRR 210-1.2) [Added March 2004; citation Revised March 2008].
- *PM₁₀* - particulate matter or particles with an aerodynamic diameter less than or equal to a nominal 10 micrometers (6 NYCRR 200.1).

- *Pollutants Regulation Under Section 112(r) of the Act* - set forth in Appendix 1-21 is the list of pollutants regulated under section 112(r) of the Act as of the effective date of this part (6 NYCRR 200.1) [Added January 2002; Revised March 2003].
- *Portable Fuel Container* - any container or vessel with a nominal capacity of ten gallons or less intended for reuse that is designed or used primarily for receiving, transporting, storing, and dispensing fuel (6 NYCRR 239-2) [Added March 2003].
- *Post-Consumer Coating* - A finished coating that would have been disposed of in a landfill, having completed its usefulness to a consumer, and does not include manufacturing wastes (6 NYCRR 205.2) [Added March 2006].
- *Potential To Emit* - the maximum capacity of an air contamination source to emit any air contaminant under its physical and operational design. Any physical or operational limitation on the capacity of the facility or air contamination source to emit any air contaminant, including air pollution control equipment and/or restriction on the hours of operation, or on the type or amount of material combusted, stored, or processed, shall be treated as part of the design only if the limitation is contained in enforceable permit conditions. Fugitive emissions, to the extent that they are quantifiable, are included in determining the potential to emit. For emergency power generating stationary internal combustion engines, the potential to emit will be based on a maximum of 500 hours of operation per year per engine unless a more restrictive limitation exists in a permit or registration (6 NYCRR 200.1 and 212.1) [Revised March 2010].
- *Preliminary Continuous Emissions Monitoring System Plan* - a document that includes, but is not limited to, source identification, source description, a description of the control technology, the applicable regulations, the type of monitor, a monitoring system flow diagram, a description of the data system, and a sample calculation for compliance (6 NYCRR 227-2.2).
- *Pre-Treatment Wash Primer* - A primer that contains a minimum of 0.5 acid, by weight, when tested in accordance with ASTM Designation D 1613-96 (1999) (see Table 1, section 200.9 of this Title), that is labeled and formulated for application directly to bare metal surfaces to provide corrosion resistance and to promote adhesion of subsequent topcoats (6 NYCRR 205.2) [Added March 2006].
- *Primary Control System* - a refrigerated condenser or equivalent closed-loop vapor recovery system approved by the Department (6 NYCRR 232.2).
- *Primer* - A coating labeled and formulated for application to a substrate to provide a firm bond between the substrate and subsequent coats (6 NYCRR 205.2) [Added March 2006].
- *Printing Process* - the equipment used to apply words, pictures, or designs to either a continuous substrate(s) or a sheet. A continuous substrate consists of paper, plastic, or other material that is unwound from a roll, passed through ink or coating applicators and any associated drying areas. The press includes all ink and coating applicators and drying areas between unwind and rewind of the continuous substrate. A sheet consists of paper, plastic, or other material that is carried through the process on a moving belt. The press includes all ink and coating applicators and drying operations between the time that the sheet is put on the moving belt until it is taken off (6 NYCRR 234.1).
- *Private Solid Waste Incineration Facility* - any facility, other than a municipal solid waste facility, that burns municipal solid waste, or any fuels derived from municipal solid waste using thermal destruction technologies, with or without energy recovery (6 NYCRR 219.1).
- *Process* –
 1. any activity involving one or more emission sources that emits or has the potential to emit any regulated air pollutant (6 NYCRR 200.1) [Added March 2006]
 2. any industrial, commercial, agricultural or other activity, operation, manufacture or treatment in which chemical, biological and/or physical properties of the material or materials are changed, or in which the

material(s) is conveyed or stored without changing the material(s) (where such conveyance or storage system is equipped with a vent(s) and is nonmobile), and which emits air contaminants to the outdoor atmosphere. Processes do not include open fires, operation of combustion installations, and incineration of refuse other than byproducts or wastes from processes (6 NYCRR 212.1).

- *Process Ventilation Emission* - an emission from any dry cleaning machine normally vented to the outer air that occurs both during the aeration cycle and when the machine door is open, excluding any emissions from door fans on azeotropic control devices and third generation equipment (6 NYCRR 232.2).
- *Process Weight* - the total weight of all materials introduced into a process that may cause air contaminant emissions to the outdoor atmosphere. Solid fuel used in a process is considered part of the process weight, but liquid and/or gaseous fuel, uncombined water and combustion air are not (6 NYCRR 200.1 and 212.1).
- *Process Weight per Hour* - the total process weight for any emission source divided by the number of h during which air contaminants are emitted by such source to the outdoor atmosphere. For continuous processes, process weight should be determined on a daily basis (6 NYCRR 200.1 and 212.1).
- *Proof Press* - a printing press used only to check the quality of print color and editorial content (6 NYCRR 234.1).
- *Pyroprocesses* - that part of cement and lightweight aggregate manufacturing related to the preheating, calcining, sintering, burning, and cooling of clinker. Such processes include a means of chemically changing the material processed and do not include physical changes such as perlite or shale expansion (6 NYCRR 200.1).
- *Publication Rotogravure Printing Process* - rotogravure printing that is subsequently formed into books, magazines, catalogs, brochures, directors, newspaper supplements and other types of printed materials (6 NYCRR 234.1).
- *Quick-Dry Enamel* - A nonflat coating that is labeled as specified in section 205.4(h) of this Part and that is formulated to have the following characteristics (6 NYCRR 205.2) [Added March 2006]:
 1. is capable of being applied directly from the container under normal conditions with ambient temperatures between 16° and 27°C (60° and 80°F);
 2. when tested in accordance with ASTM Designation D 1640-95 (1999) (see Table 1, section 200.9 of this Title), sets to touch in two hours or less, is tack free in four hours or less, and dries hard in eight hours or less by the mechanical test method; and
 3. has a dried film gloss of 70 or above on a 60-degree meter.
- *Quick-Dry Primer Sealer and Undercoater* - A primer sealer or undercoater that is dry to the touch in 30 minutes and can be relocated in two hours when tested in accordance with ASTM Designation D 1640-95 (1999) (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
- *Reasonably Available Control Technology (RACT)* - lowest emission limit that a particular source is capable of meeting by application of control technology that is reasonably available, considering technological and economic feasibility (6 NYCRR 200.1 and 212.1).
- *Recycled Coating* - An architectural coating formulated such that not less than 50 percent of the weight consists of secondary and post-consumer coating, with not less than 10 percent of the total weight consisting of post-consumer coating (6 NYCRR 205.2) [Added March 2006].
- *Refuse* - all waste material, including but not limited to garbage, rubbish, incinerator residue, street cleanings, dead animals and offal (6 NYCRR 200.1).
- *Refuse Disposal Area* - land used for depositing of refuse, except that it shall not include land used for depositing of refuse from a single family, a member of which is the owner, occupant or lessee of said land, or

any part of a farm on which animal or vegetable waste resulting from the operation of such farm are deposited. This definition includes, but is not limited to, those areas commonly referred to as landfills, sanitary landfills and dumps (6 NYCRR 200.1).

- *Regenerative Turbine* - any combustion turbine that recovers heat from the turbine exhaust gases to preheat combustion air (6 NYCRR 227-2.2).
- *Registration Certificate* - certificate issued by the Department to the owner and/or operator of an eligible facility, that has been registered pursuant to the provisions of 6 NYCRR Subpart 201-4 (6 NYCRR 200.1).
- *Refrigerated Condenser* - a closed-loop vapor recovery system into which perc vapors are condensed by cooling below the dew point of the perc using a mechanical refrigerated system (6 NYCRR 232.2).
- *Regulated Air Pollutant* - the following are regulated air pollutants for the purposes of this part (6 NYCRR 200.1) [Revised January 2002]:
 1. NO_x and any volatile organic compounds.
 2. Any air pollutant or contaminant for which a national ambient air quality standard has been promulgated including PM₁₀ (particulates), SO₂, CO, nitrogen dioxide, ozone, and lead.
 3. Any air pollutant or contaminant that is subject to any standard promulgated under the New Source Performance Standards (NSPS) in 40 CFR Part 60.
 4. Any Class I or II stratospheric ozone depleting substance Add list in Appendix or is it Federal.
 5. Any hazardous air pollutant.
 6. Pollutants regulated under section 112(r) of the Act (see above).
- *Reid Vapor Pressure (RVP)* - measure of the vapor pressure of a gasoline in pounds per square inch absolute at 100°F (6 NYCRR 225-3.2) [Added March 2003].
- *Remote Reservoir Degreasing* - cold cleaning degreasing performed in a device in which liquid solvent is pumped to a sink-like work area, where the metal parts are cleaned, and then drains back into an enclosed container allowing no solvent to pool in the work area (6 NYCRR 226.1) [Added March 2004].
- *Reportable Emissions* - emissions of regulated air pollutants actually emitted at the facility, except those exemptions listed below:
 1. On-road internal combustion engine emissions from mobile sources such as: automobiles, trucks, and buses.
 2. Off-road internal combustion engine emissions from mobile sources such as: lawn and garden equipment, agricultural equipment, logging equipment, light mobile commercial equipment (including generator sets, pumps, air and gas compressors, welders, pressure washers), industrial equipment (including forklifts, aerial lifts, sweepers, and scrubbers), construction equipment, airport service equipment, recreational equipment, recreational marine equipment, commercial marine vessels.
 3. Surface cleaning/degreasing for janitorial purposes other than of industrial machines at a facility subject to this subpart.
 4. Architectural surface coating (i.e., interior or exterior building painting).
 5. Asphalt paving.
 6. Commercial/Consumer solvent use; including household products, toiletries, aerosol products, rubbing compounds, windshield washing fluids, polishes and waxes, nonindustrial adhesives, space deodorants, moth control, laundry detergents, and treatment.
 7. Emissions from research and development activities at major facilities provided the emission rate does not exceed 0.1 lb/h and/or 100 lb/yr of any contaminant from an emission point and 1000 lb/yr of all contaminants at a facility.
 8. Emissions from activities exempt from permitting at major facilities provided the emission rate does not exceed 0.1 lb/h and/or 100 lb/yr of any contaminant from an emission point and 1000 lb/yr of all contaminants at a facility.

9. Emissions of individual chemicals (identified by chemical abstract number) at major facilities less than 10 lb/yr may be reported as less than 10 lb. For purposes of calculating emission fees, chemicals reported as less than 10 lb will be treated as though 10 lb of the chemical was emitted.
- *Research and Development Activities* - the primary purpose of such activities is to conduct research and development into processes and products, where such activities are conducted under the close supervision of technically trained personnel. Research and development activities shall not include activities whose primary purpose is to produce commercial quantities of materials (6 NYCRR 201-2.1).
 - *Reseller* - any person who purchases gasoline and resells or transfers it to a retailer or a wholesale purchaser-consumer (6 NYCRR 225-3.2).
 - *Residential Building* - any dwelling or housing that is owned, rented, or occupied by the same person for a period of 180 days or more in a year, excluding short-term housing such as a motel or hotel room rented and occupied by the same person for a period of less than 180 days (6 NYCRR 232.2).
 - *Retail Outlet* - any establishment at which gasoline is sold or offered for sale to the general public for use in motor vehicles (6 NYCRR 225-3.2).
 - *Retail Outlet* - any establishment at which portable fuel containers or spouts or both portable fuel containers and spouts are sold, supplied, or offered for sale (6 NYCRR 239-2) [Added March 2003].
 - *Retailer* - any person who owns, leases, operates, controls, or supervises a retail outlet (6 NYCRR 239-2) [Added March 2003].
 - *Retailer* - any person who owns, leases, operates, controls, or supervises a retail outlet (6 NYCRR 225-3.2).
 - *Rich Burn Internal Combustion Engine* - any stationary internal combustion engine that is not a lean burn internal combustion engine (6 NYCRR 227-2.2) [Revised March 2004].
 - *Ringelmann Chart* - the chart published and described in the U.S. Bureau of Mines Information circular 7718, on which are illustrated graduated shades of gray for use in estimating the light obscuring density of smoke. The "Micro" Ringelmann chart, a photographically reduced reproduction approximately 1/18 the size of the Ringelmann chart, is acceptable to the Commissioner as an equivalent standard (6 NYCRR 200.1).
 - *Roof Coating* - A non-bituminous coating labeled and formulated exclusively for application to roofs for the primary purpose of preventing penetration of the substrate by water or reflecting heat and ultraviolet radiation. Metallic pigmented roof coatings which qualify as metallic pigmented coatings shall not be considered in this category, but shall be considered to be in the metallic pigmented coatings category (6 NYCRR 205.2) [Added March 2006].
 - *Room Enclosure* - a room that encloses the dry cleaning machine or equipment. It is constructed of material that is impermeable to perc and designed and operated to maintain negative pressure at all times that the equipment is operating and is used with a general exhaust ventilation system (6 NYCRR 232.2).
 - *Rotogravure Printing Process* - application of words, designs, and pictures to a substrate by means of an intaglio printing operation in the inked image is transferred from minute etched or engraved wells on a plate or cylinder to the substrate that is supported by an impression roller (6 NYCRR 234.1).
 - *Routine Maintenance, Repair, Or Replacement* - whether work done at an emissions source constitutes routine maintenance, repair, or replacement is determined on a case-by-case basis by examining factors such as the nature and extent, purpose, frequency, and cost of the work. Although no single factor is conclusive, generally routine maintenance, repair, or replacement work is undertaken on a prescribed or regular schedule, limited in scope, and typically paid for out of the operation and maintenance budget of the facility. Work that is infrequent, extensive in scope, intended to extend the life expectancy of an emission source, or intended to

result in regaining lost capacity or availability is less likely to constitute routine maintenance, repair or replacement (6 NYCRR 200.1) [Added March 2009].

- *Rubbish* - solid or liquid waste materials, including but not limited to paper and paper products; rags; trees or leaves, needles and branches therefrom; vines; lawn and garden debris; furniture; cans; crockery; plastics; cartons; chemicals; paint; greases; sludges; oils and other petroleum products; wood; sawdust; demolition materials; tires, automobiles, and other vehicles and parts for junk, salvage, or disposal. Rubbish shall not include garbage, incinerator residue, street sweepings, dead animals, or offal (6 NYCRR 200.1).
- *Rust Preventive Coating* - A coating formulated exclusively for nonindustrial use to prevent the corrosion of metal surfaces and labeled as specified in section 205.4(f) of this Part (6 NYCRR 205.2) [Added March 2006].
- *Screen Printing* - application of words, designs, and pictures to a substrate by delivering ink through a tightly stretched fabric to which a refined form of stencil has been applied. The stencil and mesh openings determine the form and dimensions of the imprint. Excluded from this definition are inks/coatings or adhesives that are applied by hand held squeegee. A hand held squeegee is one that is not propelled through the use of any mechanical conveyance and is not an integral part of the screen printing process (6 NYCRR 234.1).
- *Secondary Control System* - a device or apparatus that reduces the concentration of perc in the recirculating air at the end of the drying cycle beyond the level achievable with a refrigerated condenser alone. For example, an integral carbon adsorber used in fourth generation equipment constitutes a secondary control system (6 NYCRR 232.2).
 1. An "integral" secondary control system is designed and offered as an integral part of a production package with a single make and model of dry cleaning machine and primary control system.
 2. An "add-on" secondary control system is designed or offered as a separate retrofit system for use on multiple machine makes and models.
- *Second Generation Equipment* - a dry-to-dry vented-dry cleaning machine that is not vented to a refrigerated condenser. Typically these machines are properly vented to a control device that may, for example, consist of a carbon adsorber or azeotropic control device plus a small carbon adsorber (6 NYCRR 232.2).
- *Self-service Dry Cleaning Machine* - a perc dry cleaning machine that is loaded, activated, or unloaded by the customer (6 NYCRR 232.2).
- *Shellac* - A clear or opaque coating formulated solely with the resinous secretions of the lac beetle ('*Lacifer lacca*'), thinned with alcohol and formulated to dry by evaporation without a chemical reaction (6 NYCRR 205.2) [Added March 2006].
- *Significant Air Contamination Source* - any air contamination source the emissions of which alone or in combination with others can be expected to have an adverse effect on ambient air quality during an air pollution episode. This category includes, but is not limited to: fossil fuel burning equipment with a maximum operating heat input exceeding 200 MBtu/h; processes and exhaust or ventilating systems with particulate emissions in excess of 100 lb/h; incinerators with a refuse charging capacity of 2000 lb/h or more (6 NYCRR 207.1).
- *Simple Cycle Combustion Turbine* - any combustion turbine that does not recover heat from the turbine exhaust gases (6 NYCRR 227-2.2) [Revised March 2004].
- *Small Boiler* - a boiler with a maximum heat input capacity greater than 20 MBtu/h (10 MBtu/h for coal and residual oil fired sources in the severe ozone nonattainment area) and equal to or less than 50 MBtu/h (6 NYCRR 227-2.2) [Revised March 2004].
- *Small Carbon Adsorbers* - a carbon unit that is used to adsorb perc from the machine drum when the machine door is opened to remove clothes at the end of the drying cycle. For example, the adsorbers used to control emissions from supplemental door fans or azeotropic control devices would constitute small carbon adsorbers (6 NYCRR 232.2).

- *Smoke* - an air contaminant consisting of small gasborne particles emitted by an air contamination source in sufficient number to be observable (6 NYCRR 200.1).
- *Solvent Metal Cleaning* - process of cleaning soils from metal surfaces by using a volatile organic compound (VOC) (6 NYCRR 226.1) [Added March 2004].
- *Spark-Ignition Marine Engine* - any engine used to propel a marine watercraft, and which utilizes the spark-ignition combustion cycle; including, but not limited to personal watercraft, outboard, inboard and sterndrive engines (6 NYCRR 210-1.2) [Added March 2004].
- *Special and Extreme Solvent Metal Cleaning* - the use of degreasers (6 NYCRR 226.1) [Added March 2004]:
 - to clean metal parts in the manufacturing and rework of electronic parts, assemblies, boxes, wiring harnesses, sensors and connectors used in aerospace service
 - to clean metal parts used in the manufacturing of ozone, nitrous oxide, fluorine, chlorine, bromine, halogenated compounds, or oxygen in concentrations greater than 23 percent
 - to clean metal parts exposed to ozone, nitrous oxide, fluorine, chlorine, bromine, halogenated compounds, or oxygen in concentrations greater than 23 percent.
- *Specialty Primer, Sealer and Undercoater* - A coating labeled as specified in section 205.4(g) of this Part and that is formulated for application to a substrate to seal fire, smoke or water damage, to condition excessively chalky surfaces, or to block stains. An excessively chalky surface is one that is defined as having a chalk rating of four or less as determined by ASTM Designation D 4214-98 (see Table 1, section 200.9 of this Title) (6 NYCRR 205.2) [Added March 2006].
- *Spill Proof Spout* - any spout that complies with all of the performance standards specified in Section 239-3.2 (6 NYCRR 239-2) [Added March 2003].
- *Spill Proof System* - any configuration of portable fuel container and firmly attached spout that complies with all of the performance standards in Section 239-3.1 (6 NYCRR 239-2) [Added March 2003].
- *Spout* - any device that can be firmly attached to a portable fuel container for conducting pouring through which the contents of a portable fuel container can be dispensed (6 NYCRR 239-2) [Added March 2003].
- *Stack* - any conduit, chimney, duct, vent, flue, or opening of any kind arranged to conduct air contaminants to the outdoor atmosphere (6 NYCRR 200.1).
- *Stack Sample* - a sample of the emission from an air contamination source collected from within a stack (6 NYCRR 200.1).
- *Stain* - A clear semi-transparent or opaque coating labeled and formulated to change the color of a surface but not conceal the grain pattern or texture (6 NYCRR 205.2) [Added March 2006].
- *Standard Conditions* - a temperature of 20 °C (68 °F) and an absolute pressure of 760 mm Hg (30 in.) (6 NYCRR 200.1).
- *State Implementation Plan* - the documents, including regulations, approved by the Administrator under the Act that identify actions and programs to be undertaken by the State and its subdivisions to implement the Act (6 NYCRR 200.1).
- *Stationary Internal Combustion Engine* - any internal combustion engine of either the reciprocating or rotary type whose uses may include, but are not limited to, the generation of electric power, pumping gases and liquids, and compressing air for pneumatic machinery (6 NYCRR 227-2.2) [Added March 2004].

- *Stationary source* - any building, structure, facility or installation, excluding nonroad engines, that emits or may emit any air pollutant (6 NYCRR 200.1) [Revised January 1999].
- *Sterndrive Engine* - a four-stroke spark-ignition marine engine not used in a personal watercraft that is designed such that the drive unit is external to the hull of the marine watercraft, while the engine is internal to the hull of the marine watercraft (6 NYCRR 210-1.2) [Added March 2004].
- *Still* - distillation equipment used to volatilize and recover perc from contaminated solvent removed from the cleaned materials (6 NYCRR 232.2).
- *Swimming Pool Coating* - A coating labeled and formulated to coat the interior of swimming pools and to resist swimming pool chemicals (6 NYCRR 205.2) [Added March 2006].
- *Swimming Pool Repair and Maintenance Coating* - A rubber based coating labeled and formulated to be used over existing rubber based coatings for the repair and maintenance of swimming pools (6 NYCRR 205.2) [Added March 2006].
- *System* - as used in the term “system averaging”, a combination of sources regulated under this Title which are owned or operated by the same person, provided that the person holds department operating permits for each source (6 NYCRR 227-2.2) [Revised March 2004].
- *Temperature-Indicator Safety Coating* - A coating labeled and formulated as a color-changing indicator coating for the purpose of monitoring the temperature and safety of the substrate, underlying piping, or underlying equipment, and for application to substrates exposed continuously or intermittently to temperatures above 204°C (400°F) (6 NYCRR 205.2) [Added March 2006].
- *Thermoplastic Rubber Coating and Mastic* - A coating or mastic formulated and recommended for application to roofing or other structural surfaces and that incorporates no less than 40 percent by weight of thermoplastic rubbers in the total resin solids and may also contain other ingredients including, but not limited to, fillers, pigments, and modifying resins (6 NYCRR 205.2) [Added March 2006].
- *Tint Base* - An architectural coating to which coloring is added after packaging in sale units to produce a desired color (6 NYCRR 205.2) [Added March 2006].
- *Title V* - refers to Title V of the Act and all rules promulgated in accordance with it (6 NYCRR 200.1).
- *Third Generation Equipment* - a closed-loop dry cleaning machine equipped with a refrigerated condenser or other equivalent primary control system (6 NYCRR 232.2).
- *Title V Facility Permit* - permit for a facility or a defined area source, group, or category of emission units at a facility that is issued by the Department pursuant to Subpart 201-6 (6 NYCRR 201-2.1).
- *Traffic Marking Coating* - A coating labeled and formulated for marking and striping streets, highways, or other traffic surfaces including, but not limited to, curbs, berms, driveways, parking lots, sidewalks and airport runways (6 NYCRR 205.2) [Added March 2006].
- *Transfer Machine* - perc dry cleaning equipment in which washing and extraction are performed in one unit and drying is performed in a separate unit.
- *Tune-up* - adjustments made to a boiler in accordance with procedures supplied by the manufacturer (or an approved specialist) to optimize the combustion efficiency (6 NYCRR 227-2.2) [Revised March 2004].
- *Ultimate Consumer* - the first person who purchases or obtains gasoline for use in motor vehicles (6 NYCRR 225-3.2).

- *Unit Space Heater* - a small heating unit, which may be portable, used at a non-residential facility for warming air of an enclosed area, such as a room (6 NYCRR 200.1).
- *Vapor Adsorber* - a bed of activated carbon or other adsorbent into which vapors are introduced and trapped for subsequent desorption (6 NYCRR 232.2).
- *Vapor Barrier* - a material surface or coating that is impermeable to perc (6 NYCRR 232.2).
- *Vapor Control System* - a system that prevents emissions to the outdoor atmosphere from exceeding 4.7 gr/gal (80 g/1000 L) of petroleum liquid loaded (6 NYCRR 230.1).
- *Vapor Leak* - a fugitive emission of perc vapor from unintended openings in the dry cleaning system. A vapor leak can be indicated by a rapid audible signal or visual signal from a halogenated-hydrocarbon detector or other approved instrument (6 NYCRR 232.2).
- *Vehicle* - a device by which any person or property may be propelled, moved, or drawn upon a highway, excepting a device moved exclusively by human power or used exclusively upon stationary rails or tracks (6 NYCRR 218-1.2) [Added March 2003].
- *Very Large Boiler* - a boiler with a maximum heat input capacity greater than 250 MBtu/h (6 NYCRR 227-2.2) [Revised March 2004].
- *Volatile Organic Compound (VOC)* - any organic compound that participates in atmospheric photochemical reactions. This includes any organic compounds other than those compounds with negligible photochemical reactivity that is listed below. For purposes of determining compliance with emission limits in this Subchapter, VOC will be measured by test methods in appendix A of 40 CFR 60 or by an alternative method acceptable to the Department on the basis of a demonstration that it is as accurate as the appendix A method. Where such a method also inadvertently measures compounds with negligible photochemical reactivity, an owner or operator may exclude these negligibly reactive compounds when determining compliance with a VOC emission standard. The following compounds are not volatile organic compounds (6 NYCRR 200.1):
 1. CO
 2. CO₂
 3. carbonic acid
 4. metallic carbides or carbonates
 5. ammonium carbonate
 6. methane
 7. ethane
 8. 1,1,1 trichloroethane (methyl chloroform)
 9. trichlorotrifluoroethane (CFC-113)
 10. methylene chloride
 11. trichlorofluoromethane (CFC-11);
 12. dichlorodifluoromethane (CFC-12)
 13. chlorodifluoromethane (CFC-22)
 14. trifluoromethane (FC-23)
 15. 1,2 dichlorotetrafluoroethane (CFC-114)
 16. chloropentafluoroethane (CFC-115)
 17. perfluorocarbon compounds which are: cyclic, branched, or linear completely fluorinated alkanes; cyclic, branched, or linear completely fluorinated ethers with no unsaturations; cyclic, branched, or linear completely fluorinated tertiary amines with no unsaturations; or sulfur containing perfluorocarbons with no unsaturations and with sulfur bonds only to carbon and fluorine,
 18. dichlorotrifluoroethane (HCFC-123)
 19. tetrafluoroethane (HFC-134a)
 20. dichlorofluoroethane (HCFC-141b)
 21. chlorodifluoroethane (HCFC-142b)
 22. 2-chloro-1,1,1,2-tetrafluoroethane (HCFC-124)

- 23. pentafluoroethane (HFC-125)
- 24. 1,1,2,2-tetrafluoroethane (HFC-134)
- 25. 1,1,1-trifluoroethane (HFC-143a)
- 26. 1,1-difluoroethane (HFC-152a)
- 27. parachlorobenzotrithloride (PCBTF)
- 28. cyclic, branched, or linear completely methylated siloxanes
- 29. acetone
- 30. perchloroethylene (tetrachloroethylene)
- 31. methyl acetate
- 32. 3,3-dichloro-1,1,1,2,2-pentafluoropropane (HCFC-225ca)
- 33. 1,3-dichloro-1,1,2,2,3-pentafluoropropane (HCFC-225cb)

- *Waste Fuel* - either of the following to be burned singly, together, or in combination with fuel oil:
 1. waste fuel A
 2. waste fuel B (6 NYCRR 225-2.2).
- *Waste Fuel A* - any waste oil, fuel oil, or mixture of these to be burned which contains between 25 and 250 ppm (by weight) lead and which meets the limitations of Table 1-1 below and does not contain chemical waste (6 NYCRR 225-2.2).
- *Waste Fuel B* - any fuel to be burned which does not meet the following limitations and/or contains any chemical waste (6 NYCRR 225-2.2).

| Constituent/Property | Allowable |
|---------------------------------|---|
| Polychlorinated Biphenyls (PCB) | Less than 50 ppm |
| Total Halogens | 1000 ppm ¹ maximum |
| Sulfur | See Appendix 1-13 for fuel sulfur limitations |
| Lead | 250 ppm* maximum |
| Gross Heat Content | 125,000 (Btu/gal) minimum |

* Parts per million (ppm) by weight (water free basis) of fuel.

- *Waste Oil* - used and/or reprocessed engine lubricating oil and/or any other used oil, including but not limited to, fuel oil, engine oil, gear oil, cutting oil, transmission fluid, hydraulic fluid, dielectric fluid, oil storage tank residue, animal oil, and vegetable oil, which has not subsequently been rerefined (6 NYCRR 225-2.2).
- *Water Separator* - a vessel that uses gravity to physically separate liquid perc from liquid water (6 NYCRR 232.2).
- *Waterproofing Sealer* - A coating labeled and formulated for application to a porous substrate for the primary purpose of preventing the penetration of water (6 NYCRR 205.2) [Added March 2006].
- *Waterproofing Concrete/Masonry Sealer* - A clear or pigmented film-forming coating that is labeled and formulated for sealing concrete and masonry to provide resistance against water, alkalis, acids, ultraviolet light, and staining (6 NYCRR 205.2) [Added March 2006].
- *Weighted Average Allowable Emission Rate* - the average emission rate of all operating sources in a system averaging where the mass emission rate of the sources in operation is equivalent to the mass emission rate achieved with each source operating in compliance with the most stringent applicable RACT emission limit (6 NYCRR 227-2.2) [Revised March 2004].
- *Wholesale Purchaser-Consumer* - any ultimate consumer of gasoline who purchases or obtains gasoline from a supplier for use in motor vehicles and receives delivery of that product into a storage tank, substantially under the control of that person, of at least 550-gal capacity (6 NYCRR 225-3.2).

- *Wood* - the fibrous material beneath and including the bark of trees or any derivative fuel or residue thereof, in any unadulterated form, including but not limited to sawdust, sanderdust, wood chips, scraps, slabs, millings, shavings and processed pellets made from wood or other forest residues (6 NYCRR 200.1).
- *Wood Preservative* - A coating labeled and formulated to protect exposed wood from decay or insect attack, that is registered under the Federal Insecticide, Fungicide, and Rodenticide Act (7 U.S.C. section 136, 'et. seq'.) (see Table 1, section 200.9 of this Title) and with Part 326 of this Title (6 NYCRR 205.2) [Added March 2006].
- *Vehicle* - a device by which any person or property may be propelled, moved, or drawn upon a highway, excepting a device moved exclusively by human power or used exclusively upon stationary rails or tracks.

Appendix 1-1

Activities Exempt from Permitting Requirements

(Source: 6 NYCRR 201-3.2(c))

[Revised January 2002; Revised March 2003; Revised March 2004; Revised March 2005]

(NOTE: The category headings used in the following listing of exemptions are strictly for organizational purposes and are not intended to be definitive.)

The following activities are exempt from permitting requirements at non-Title V facilities, but must be included in Title V facility permit applications:

Combustion

- (1) Stationary or portable combustion installations where the furnace has a maximum rated heat input capacity less than 10 million BTU/hr burning fossil fuels, other than coal, and coal and wood fired stationary combustion units with a maximum heat input less than 1 million BTU/hr. This exemption includes unit space heaters, which burn waste oil as defined in 6 NYCRR Subpart 225-2 and generated on-site, alone or in conjunction with used oil generated by a do-it-yourself oil changer as defined in 6 NYCRR Subpart 374-2.
- (2) Stationary or portable combustion installations located outside of any severe ozone non-attainment areas, where the furnace has a maximum rated heat input capacity less than 20 million Btu/hr burning fossil fuels other than coal, where the construction of the combustion installation commenced before June 9, 1989.
- (3) Stationary or portable internal combustion engines which meet the following criteria:
 - (i) are diesel or natural gas powered, and located within any severe ozone nonattainment area, and have maximum mechanical power rating of less than 225 brake horsepower; or
 - (ii) are diesel or natural gas powered, and located outside of any severe ozone nonattainment areas, and have maximum mechanical power rating of less than 400 brake horsepower or;
 - (iii) are gasoline powered and have a maximum mechanical power rating of less than 50 brake horsepower;
- (4) Stationary or portable internal combustion engines which are temporarily located at a facility for a period not to exceed 30 days per calendar year, where the total combined maximum mechanical power rating for all affected units is less than 1000 brake horsepower.
- (5) Gas turbines with a heat input at peak load less than 10 million BTU per hour;
- (6) Emergency power generating stationary internal combustion engines as defined in 6 NYCRR paragraph 227-2.2(b)(7) and engine test cells at engine manufacturing facilities which are utilized for research and development, reliability performance testing, or quality assurance performance testing.

Combustion-Related

- (7) Non-contact water cooling towers and water treatment systems for process cooling water and other water containers designed to cool, store or otherwise handle water that has not been in direct contact with gaseous or liquid process streams;

Agricultural

- (8) Feed and grain milling, cleaning, conveying, drying and storage operations including grain storage silos, where such silos exhaust to an appropriate emission control device, excluding grain terminal elevators with permanent storage capacities over 2.5 million U.S. bushels, and grain storage elevators with capacities above one million bushels;
- (9) Equipment used exclusively to slaughter animals, but not including other equipment at slaughterhouses, such as rendering cookers, boilers, heating plants, incinerators, and electrical power generating equipment;

Commercial -- Food Service Industries

- (10) Flour silos at bakeries, provided all such silos are exhausted through an appropriate emission control device;
- (11) Emissions from flavorings added to a food product where such flavors are manually added to the product.

Commercial -- Graphic Arts

- (12) Screen printing inks/coatings or adhesives which are applied by a hand-held squeegee. A hand-held squeegee is one that is not propelled through the use of mechanical conveyance and is not an integral part of the screen printing process;
- (13) Graphic arts processes at facilities located outside the New York City metropolitan area whose facility-wide total emissions of volatile organic compounds from inks, coatings, adhesives, fountain solutions and cleaning solutions does not exceed 20 pounds per day;
- (14) Graphic label and/or box labeling operations where the inks are applied by stamping or rolling;
- (15) Graphic arts processes which are specifically exempted from regulation under Part 234 of this Title, with respect to emissions of volatile organic compounds which are not given an A rating;

Commercial -- Other

- (16) Gasoline dispensing sites with an annual throughput less than 120,000 gal located outside any severe ozone non-attainment areas;
- (17) Surface coating and related operations which use less than 25 gal per month of coating materials (paints) and cleaning solvents, combined, subject to the following:
 - (i) the facility is located outside of any severe ozone nonattainment area; and
 - (ii) all abrasive cleaning and surface coating operations are performed in an enclosed building where such operations are exhausted into appropriate emission control devices.
- (18) Abrasive cleaning operations which exhaust to an appropriate emission control device. (19) Ultraviolet curing operations.
- (19) Ultraviolet curing operations.

Municipal/Public Health Related

- (20) Ventilating systems for landfill gases, where the systems are vented directly to the atmosphere, and the ventilating system has been required by, and is operating under, the conditions of a valid Part 360 permit, or Order on Consent;

Storage Vessels

- (21) Distillate and residual fuel oil storage tanks with storage capacities below 300,000 barrel.
- (22) Pressurized fixed roof tanks which are capable of maintaining a working pressure at all times to prevent emissions of volatile organic compound to the outdoor atmosphere.
- (23) External floating roof tanks which are of welded construction and are equipped with a metallic-type shoe primary seal and a secondary seal from the top of the shoe seal to the tank wall.
- (24) External floating roof tanks which are used for the storage of a petroleum or volatile organic liquid with a true vapor pressure less than 4.0 psi (27.6 kPa), are of welded construction and are equipped with one of the following:
 - (i) a metallic-type shoe seal;
 - (ii) a liquid-mounted foam seal;
 - (iii) a liquid-mounted liquid-filled type seal; or
 - (iv) equivalent control equipment or device;
- (25) Storage tanks, with capacities under 10,000 gallons, except those subject to either Part 229 or Part 233 of this Title.
- (26) Horizontal petroleum storage tanks.
- (27) Storage silos storing solid materials, provided all such silos are exhausted through an appropriate emission control device.

Industrial

- (28) Processing equipment at existing sand and gravel and stone crushing plants which were installed or constructed before August 31, 1983, where water is used other than for dust suppression, such as wet conveying, separating and washing.
- (29) all processing equipment at sand and gravel mines or quarries that:
 - (i) are permanent or fixed installations with a maximum rated processing capacity of 25 tons of minerals per h or less; or
 - (ii) are mobile (portable) installations with a maximum rated processing capacity of 150 tons of minerals per h or less;

- (30) Mobile (portable) stone crushers with maximum rated capacities below 150 tons of minerals per h which are located at non-metallic mineral processing operations.
- (31) Surface coating operations which are specifically exempted from regulation under Part 228 of this title, with respect to emissions of volatile organic compounds which are not given an A rating.
- (32) Pharmaceutical tablet branding operations.
- (33) Thermal packaging operations, including but not limited to, the image labeling, blister packing, shrink wrapping, shrink banding, and carton gluing.
- (34) Powder coating operations.
- (35) All tumblers used for the cleaning and/or deburring of metal products without abrasive blasting.
- (36) Presses used exclusively for molding or extruding plastics except where halogenated carbon compounds or hydrocarbon solvents are used as foaming agents.
- (37) Concrete batch plants where the cement weigh hopper and all bulk storage silos are exhausted through fabric filters, and the batch drop point is controlled by a shroud or other emission control device.
- (38) Cement storage operations where materials are transported by screw or bucket conveyors.
- (39) Solvent metal cleaning processes:
 - (i) cold cleaning degreasers with an open surface area of 11 square ft or less and an internal volume of 93 gal or less or, having an organic solvent loss of 3 gal per day or less; or
 - (ii) cold cleaning degreasers that use a solvent with a VOC content of 5 percent or less by weight, unless subject to the requirements in 40CFR 63, Subpart T
 - (iii) conveyORIZED degreasers with an air/vapor interface smaller than 22 square feet (2.0 m²), unless subject to the requirements in 40CFR 63, Subpart T
 - (iv) open-top vapor degreasers with an open-top area smaller than 11 square feet (1.0 m²), unless subject to the requirements in 40 CFR 63, Subpart T.

Miscellaneous

- (40) Ventilating and exhaust systems for laboratory operations.
- (41) Exhaust or ventilating systems for the melting of gold, silver, platinum and other precious metals.
- (42) Exhaust systems for paint mixing, transfer, filling or sampling and/or paint storage rooms or cabinets, provided the paints stored within these locations are stored in closed containers when not in use.
- (43) Exhaust systems for solvent transfer, filling or sampling, and/or solvent storage rooms provided the solvent stored within these locations are stored in closed containers when not in use.
- (44) Research and development activities, including both stand-alone and activities within a major stationary source, until such time as the Administrator completes a rulemaking to determine how the permitting program should be structured for these activities.
- (45) The application of odor counteractants and/or neutralizers.

Appendix 1-2

Trivial Activities Exempt from Permitting Requirements

(Source: 6 NYCRR 201-3.3(c)) [Revised March 2004]

(NOTE: The category headings used in the following listing of trivial activities are strictly for organizational purposes and are not intended to be definitive.)

The following activities are trivial and are exempt from permitting requirements and do not need to be included in the Title V facility permit application:

Combustion

- (1) Boiler water treatment operations.

Domestic/Work Station Comfort and Related

- (2) Any emission source or process constructed or operated at a domestic residence for domestic use.
- (3) Vacuum cleaning systems used exclusively for office type areas at industrial facilities, or commercial-or residential housekeeping.
- (4) Ventilating systems used exclusively for temperature and humidity control of buildings for the comfort of people living or working within the building except those systems which have applicable requirements under Title VI of the Act.
- (5) Exhaust systems for the storage of portable containers, drums, and bags of chemicals in rooms, buildings and warehouses, subject to the following:
 - (i) the rooms, buildings and warehouses subject to this exemption are solely for the purpose of chemical storage, and no mixing, transfer or filling operations with the exception of sampling for quality assurance/quality control purposes, take place within such areas; and
 - (ii) the chemicals stored in such areas are maintained in sealed containers.
- (6) Smoking rooms and areas.
- (7) Bathroom/toilet vents.
- (8) Beauty salons and barber shops.
- (9) Laundry dryers, extractors, or tumblers used to clean fabrics with water solutions of bleach and detergents, where the emissions of such operations are controlled by appropriate emission control devices.

Mobile Sources and Mobile Source Related

- (10) Engine exhaust emissions and/or refueling emissions generated from mobile and portable powered vehicles and equipment used for the propulsion or operation of passengers and/or freight transportation vehicles, marine vehicles and equipment, construction and off-road vehicles and equipment, farm vehicles and equipment, competition and entertainment vehicles and equipment, and/or any other type of mobile or portable engine powered vehicles or equipment when these vehicles or equipment are operated anywhere outside of an enclosed facility for the purpose of their design and intended use or for compliance assessment with any safety or emission control or inspection programs sanctioned by New York State, the federal government or any governmental entity empowered to carry out such activities.
- (11) Engine exhaust emissions and/or refueling emissions generated from mobile and portable powered vehicles and equipment such as competition and entertainment vehicles and equipment, farm vehicles and equipment, construction and off-road vehicles and equipment, automobiles, motorcycles, trucks, buses, marine vehicles and equipment, small engine powered tools and equipment, or any other type of mobile or portable engine powered vehicles or equipment which are collected and/or vented in any manner through any opening in a facility when these vehicles and equipment are operated in the facility for the purposes of their design and intended use, public safety, comfort or entertainment, facility maintenance, vehicle or equipment repair, adjustment or testing, or compliance assessment with any safety or emission control or inspection programs sanctioned by New York State, the federal government, or any governmental entity empowered to carry out such activities.
- (12) The use of products such as antifreeze and fuel additives for the purpose of maintaining motor vehicles.
- (13) Fugitive emissions related to movement of passenger vehicles, provided the emissions are not counted for applicability purposes and any required fugitive dust control plan or its equivalent is submitted.

Agricultural

- (14) Ventilating systems used in buildings to house animals.

Commercial -- Food Service Industries

- (15) Emissions from process, exhaust or ventilating systems in bakeries and restaurants which derive over fifty percent of their revenues from retail sales on premises.
- (16) Non-conveyorized bakery ovens (this includes batch ovens, which are defined as a non-conveyor belt oven operating a single baking cycle in which a determinate amount of product is cooked at one baking).
- (17) Bakery ovens used exclusively to produce baked goods leavened chemically in the absence of yeast.
- (18) Process or exhaust or ventilating systems involved in the preparation of food, food blanching or cooking in water.
- (19) Process, exhaust or ventilating systems or stationary combustion installations exclusively involved in the production of maple syrup.

Commercial -- Graphic Arts

- (20) Lead melting pots used in printing establishments.
- (21) Blueprint machines.
- (22) Photocopying, photographic processing or related equipment.
- (23) Letter press operations. (24) Heat sealing operations which are used to seal and separate polyethylene and polypropylene bags.
- (24) Heat sealing operations which are used to seal and separate polyethylene and polypropylene bags.

Commercial -- Other

- (25) Batch process kilns used for firing ceramic ware, subject to the following:
 - (i) the exhaust stream does not contain emissions of fluorides, lead, and/or beryllium; and
 - (ii) the total heat input is less than 1 million BTU/hr

Municipal/Public Health Related

- (26) Equipment used exclusively to generate ozone for water treatment processes.
- (27) Air stripping processes utilized on public drinking water supplies.
- (28) Air strippers and soil vents used to remediate gasoline spills, where the air stripper or soil vent is located at a state funded site, or required under the provisions of an Order on Consent or stipulation agreement, and the operation of the air strippers or soil vents are conducted under the supervision of the Department and are properly controlled as required by the Department.
- (29) Air strippers and soil vents required under the provisions of an Order on Consent or stipulation agreement, or in operation at a superfund site.
- (30) Air strippers and soil vents operating for test purposes to qualify and quantify air emissions for remediation projects and for a time period acceptable to the regional air pollution control engineer.
- (31) Emissions from the storage and application of road salt (calcium chloride or sodium chloride).
- (32) All process emission sources which are located at private, public, or vocational education institutions, where the emissions are the result of teaching and training exercises, and the institution is not engaged in the manufacture of products for commercial sale in commerce, except in a de minimis manner.
- (33) Emergency relief vents, stacks and ventilating systems except any with the potential to emit vinyl chloride located at a facility where ethylene dichloride, vinyl chloride and/or polyvinyl chloride are produced.
- (34) Snow plowing, street sweeping, sanding and ashing of streets and roads to abate traffic hazards.
- (35) Emergency road flares.
- (36) Road and lot paving and striping operations.
- (37) Public or private roadways, parking lots.
- (38) Manhole covers. (39) Sewers.
- (40) Storm drains and vents.
- (41) Solid waste dumpsters, including handling equipment and associated activities.
- (42) Excavation for the repair of underground utility lines such as water, electric, or natural gas.
- (43) Asbestos demolition and removal work subject to 40 CFR Part 61, Subpart M and/or 12 NYCRR Part 56.

Storage Vessels

- (44) Storage vessels, tanks and containers with a capacity of less than 750 gallons.

Maintenance and Construction Related Activities

- (45) The following activities are considered trivial when they occur strictly for maintenance or construction activities: plastic pipe welding, soldering, brazing, cutting torches, janitorial activities, steam cleaning, water washing, acid and caustic washing activities, miscellaneous use of solvents, adhesives and caulking, miscellaneous sandblasting, non-asbestos insulation removal, application of refractory and insulation, the periodic use of air for clean-up, and, the process of demolition and rebricking boilers, smelters, furnaces and kilns (this does not include the subsequent operation of such equipment), the surface coating of equipment and buildings as is related to maintenance and construction, and activities which occur for maintenance of grounds such as lawn care, weed control and pest control.
- (46) Excavation for new construction.

Industrial

- (47) Degreasing units which exclusively use non-hazardous air pollutant acids.
- (48) Degreasing units which exclusively use caustics (e.g., potassium hydroxide and sodium hydroxide).
- (49) Remote reservoir parts cleaners whose use of solvent is contained to the immediate cleaning of the part, after which time the solvent is drained through a drain opening, not to exceed 16 square inches, and is returned to a remote reservoir containing the solvent.
- (50) Cold cleaning degreasers that use a solvent with a VOC content of 5 percent or less by weight.
- (51) Cold cleaning degreasers with an internal volume less than or equal to 2 gallons.
- (52) Hand-held or manually operated equipment used for buffing, polishing, carving, cutting, drilling, machining, routing, sanding, sawing, surface grinding or turning ceramic art work, ceramic precision parts, leather, metal parts, plastics, fiberboard, fiberglass, masonry, carbon, glass, graphite, wood or rubber.
- (53) Manual surface coating/painting processes which exclusively use brushes, rollers, or aerosol cans.
- (54) Hand-held or manually operated welding, brazing and soldering equipment.
- (55) Acetylene, butane, and propane torches.
- (56) Equipment used for hydraulic or hydrostatic testing.
- (57) Equipment lubricating systems, including metal cutting coolants and oils.
- (58) Pneumatic starters used to start reciprocating engines, turbines, and other equipment.
- (59) Instrument air systems, excluding fuel-fired compressors.
- (60) Air vents from air compressors and pneumatically operated equipment emitting ambient air.
- (61) Drum washing operations, where such operations are necessary to meet Resource Conservation and Recovery Act (RCRA) standards.
- (62) Vacuum producing devices where only ambient air and the oil emissions from the vacuum producing mechanism itself are exhausted.
- (63) Woodworking operations where no surface coating takes place, provided such operations exhaust to a sawdust collection system controlled by an appropriate emission control device.
- (64) Sawmills, provided all processes are located at least 500 ft from any recreational area, school, or private residence and all residues from debarking, planing, sawing, etc., are contained in such a manner as to minimize fugitive emissions.
- (65) Equipment used to mix and package soaps, vegetable oil, grease, animal fat, and nonvolatile aqueous salt solutions, provided appropriate lids and covers are utilized.
- (66) Drop hammers or hydraulic presses for forging or metalworking.
- (67) Transportable chemical containers including rail cars, portable tanks, totes and trailers.

Miscellaneous

- (68) Open fires. (see AE.130.1.NY. and AE.130.2.NY.)
- (69) Fire training activities.
- (70) Fire suppression systems.
- (71) Fecal incinerators with a charging rate not exceeding 10 pounds per hour, such as those used on certain vehicles or other special cases.
- (72) Paint mixing operations located at retail paint, hardware or department stores where the paint is sold in five gal or smaller containers.
- (73) Rifle and pistol ranges.
- (74) Aircraft de-icing operations.

- (75) Contaminant detectors, sampling devices and recorders.
- (76) Emissions from natural gas odoring activities.
- (77) Battery charging areas except those located at battery manufacturing plants.
- (78) Incubators.
- (79) The venting of compressed natural gas, butane or propane gas cylinders.
- (80) Coal car thaw-pit burners.
- (81) Consumer use of office equipment and products, not including printers or businesses primarily involved in photographic reproductions.
- (82) Consumer use of paper trimmers/binders.
- (83) Blacksmith forges.
- (84) Carbon dioxide lasers, used only on metals and other materials which do not emit hazardous air pollutants in the process.
- (85) Laser trimmers using appropriate emission control devices.
- (86) Environmental chambers not using hazardous air pollutant gases.
- (87) Shock chambers.
- (88) Humidity chambers.
- (89) Solar simulators.
- (90) Process water filtration systems and demineralizers.
- (91) Demineralized water tanks and demineralizer vents.
- (92) Steam leaks.
- (93) Steam vents.
- (94) Emissions of the following pollutants: water vapor, oxygen, carbon dioxide, nitrogen, inert gases such as argon, helium, neon, krypton and xenon, hydrogen, simple asphyxiants including methane and propane, and trace constituents included in raw materials or byproducts, where the constituents are less than 1 percent by weight for any regulated air pollutant, or 0.1 percent by weight for any carcinogen listed by the United States Department of Health and Human Services' Seventh Annual Report on Carcinogens (1994).

Appendix 1-3

Hazardous Air Pollutants

(Source: 6 NYCRR 200-1) [Added January 1998]

| <u>CAS Number</u> | <u>Chemical Name</u> |
|-------------------|---|
| 75070 | Acetaldehyde |
| 60355 | Acetamide |
| 75058 | Acetonitrile |
| 98862 | Acetophenone |

NOTE: For all listings above which contain the word "compounds" and for glycol ethers, the following applies: Unless otherwise specified, these listings are defined as including any unique chemical substance that contains the named chemical (i.e., antimony, arsenic, etc.) as part of that chemical's infrastructure.

- {1} X'CN where X = H' or any other group where a formal dissociation may occur. For example KCN or Ca(CN(2)).
- {2} Includes mono- and di-ethers of ethylene glycol, diethylene glycol, and triethylene glycol R-(OCH(2)CH(2))n-OR' where
n = 1, 2, or 3
R = alkyl or aryl groups
R' = R, H, or groups which, when removed, yield glycol ethers with the structure: R-(OCH(2)CH)n-OH. Polymers are excluded from the glycol category.
- {3} Includes mineral fiber emissions from facilities manufacturing or processing glass, rock, or slag fibers (or other mineral derived fibers) of average diameter 1 micrometer or less.
- {4} Includes organic compounds with more than one benzene ring, and which have a boiling point greater than or equal to 100°C.
- {5} A type of atom which spontaneously undergoes radioactive decay.

Sources Deferred From Title V Permitting

(Source: 6 NYCRR 201-6.8)

Sources Regulated by National Emission Standards for Hazardous Air Pollutants:

40 CFR 63.320 Subpart M: Perchloroethylene Dry Cleaning Facilities

40 CFR 63.340 Subpart N: Chromium Electroplating

40 CFR 63.360 Subpart O: Ethylene Oxide Commercial Sterilization

40 CFR 63.460 Subpart T: Halogenated Solvent Metal Cleaning

40 CFR 63.541 Subpart X: Secondary Lead Smelting

Appendix 1-5

Facility Reporting Thresholds

[Deleted March 2006]

(NOTE: 6 NYCRR 202-2.1 was revised.)

Appendix 1-6

Process Emission Limits Sources Exempted from Process Emissions Requirements

(Source: 6 NYCRR 212.7)

- Process emission sources which are exempt under section 201-3 (see Appendices 1-1 and 1-2) of this title
- Kilns and clinker coolers in Portland cement plants subject to Part 220 of this title with respect to emissions that are not given an A rating
- Ferrous jobbing foundry melting furnaces in operation on or prior to 6 February 1968, with respect to particulate emissions only
- Byproduct coke oven batteries subject to Part 214 of this title with respect to emissions which are not given an A rating
- Gasoline, petroleum, and volatile organic liquid storage and transfer facilities subject to Part 229 or Part 230 of this title, with respect to volatile organic compound emissions which are not given an A rating
- Process emission sources other than kilns and clinker coolers in a Portland cement plant with respect to opacity of emissions only
- Process emission sources in a sulfuric or nitric acid plant that are regulated by Part 224 of this title with respect to emissions of NO_x, oxides of sulfur, sulfuric acid mist, and smoke
- Process emission sources in a petroleum refinery subject to Part 223 of this title with respect to sulfur compound emissions and emissions of volatile organic compounds that are not given an A rating
- Process emission sources from which emissions of oxides of sulfur are attributable only to sulfur in fuel with respect to emissions of oxides of sulfur
- Solvent metal cleaning processes subject to Part 226 of this title with respect to emissions of volatile organic compounds which are not given an A rating
- Iron and/or steel processes subject to Part 216 of this title
- Surface coating operations subject to Part 228 of this title or coatings exempt from Part 228 pursuant to section 228.1(h) of this title with respect to emissions of volatile organic compounds that are not given an A rating
- Process emission sources with respect to emissions of CO and volatile organic compounds produced solely by incomplete combustion of any fuel, except where material is heated, burned, combusted or otherwise chemically changed under oxygen-deficient conditions by design
- Perchloroethylene dry cleaning facilities subject to Part 232 of this title
- Pharmaceutical and cosmetic manufacturing processes subject to Part 233 of this title or processes exempt from Part 233 pursuant to section 233.1(g) of this title with respect to emissions of volatile organic compounds which are not given an A rating
- Graphic arts processes subject to Part 234 of this title or inks exempt from Part 234 pursuant to section 234.1(h) of this title with respect to emissions of volatile organic compounds which are not given an A rating
- Primary aluminum reduction plant processes subject to Part 209 of this title with respect to opacity and emissions of total fluorides, and

- Process emission sources with respect to emissions of NO_x produced by catalytic oxidizers used as air pollution control equipment.

Appendix 1-7

Determination of Applicable Emission Standards

(Source: 6 NYCRR 212.5 and 212.9)

- (a) Where air contaminants from two or more devices or contrivances are emitted to the outdoor atmosphere through a single emission point, the permissible emission rate or degree of air cleaning required is determined by using the sum of the process weights or emission rate potentials for all such devices or contrivances.
- (b) Where air contaminants from a single device or contrivance are emitted to the outdoor atmosphere through more than one emission point, the sum of the emissions from all such emission points shall not exceed the quantity that would be permitted if said emissions were through a single emission point.
- (c) Where air contaminants from two or more devices or contrivances are emitted to the outdoor atmosphere through a single emission point and the applicable emission standard for one or more of such devices or contrivances if vented separately to the outdoor atmosphere is a concentration standard (grains per standard cubic foot), the permissible emission rate through such emission point shall not exceed the quantity that would be allowed if said emissions were through separate emission points.
- (d) Where a source owner can demonstrate to the satisfaction of the commissioner that he will apply best available control technology, the commissioner may specify a less restrictive permissible emission rate, emission standard or degree of air cleaning for such source than required under this Part provided that the less restrictive requirement is equivalent to that which can be achieved through the application of best available control technology.
- (e) A process emission source, subject to the Federal new source performance standards in 40 CFR part 60, the national emission standards for hazardous air pollutants in 40 CFR part 61, or to the polychlorinated biphenyl disposal criteria in 40 CFR part 761 satisfies the requirements of this Part for the contaminant regulated by the Federal standard if the source owner can demonstrate that the source is in compliance with the respective Federal regulation.
- (f) Owners and/or operators of facilities which have limited the facility's annual potential to emit nitrogen oxides or volatile organic compounds below applicability levels through federally and state enforceable special conditions in permits to construct and/or certificates to operate under the provisions of section 212.10(d) of this Part must maintain annual actual emissions below these limitations. Nitrogen oxide and volatile organic compound emission points at these facilities are not subject to the control requirements in section 212.9(b) of this Part if the emissions are not given an A rating.

Table 1: Environmental Rating

| Rating | Criteria |
|---------------|--|
| A | An air contaminant whose discharge results or may result in serious adverse effects on receptors or the environment. These effects may be of a health, economic or aesthetic nature or any combination of these. |
| B | An air contaminant whose discharge results or may result in only moderate and essentially localized effects or where the multiplicity of sources of the contaminant in any given area would require an overall reduction of the atmospheric burden of that contaminant. |
| C | An air contaminant whose discharge may result in localized adverse effects of an aesthetic or nuisance nature. |
| D | An air contaminant whose discharge will not result in measurable or observable effects on receptors, nor add to an existing or predictable atmospheric burden of that contaminant which may cause adverse effects, considering properties and concentrations of the emissions, isolated conditions, stack height, and other factors. |

Table 2: Degree of Air Cleaning Required (Excluding Volatile Organic Compound Emissions in the New York City Metropolitan Area)

| Environmental Rating | Emission Rate Potential (lb/h) | | | | | | | | | | |
|----------------------|--------------------------------|--|------------|------------|------------|-------------|--------------|--------------|-----------------------|--------------------|--|
| | Less than 1.0 | 1 to 10 | 10 to 20 | 20 to 100 | 100 to 500 | 500 to 1000 | 1000 to 1500 | 1500 to 4000 | 4000 to 10,000 | 10,000 and Greater | |
| A | * | 99 percent or Greater or Best Available Control Technology | | | | | | | | | |
| B | * | * | 90 percent | 91 percent | 94 percent | 96 percent | 97 percent | 98 percent | 99 percent or Greater | | |
| C | * | * | 70 percent | 75 percent | 85 percent | 90 percent | 93 percent | 95 percent | 98 percent or Greater | | |
| D | No Air Cleaning Required | | | | | | | | | | |

* Degree of air cleaning required is specified by the Commissioner.

Table 3: Degree of Air Cleaning Required in the New York City Metropolitan Area

| Environmental Rating | Emission Rate Potential (lb/h) | | |
|----------------------|--------------------------------|-------------------------------|------------------|
| | Less than 1.0 | 1.0 to 3.5 | Greater than 3.5 |
| A | * | 99 percent or Greater or BACT | |
| B or C | * | * RACT | |
| D | No Air Cleaning Required | No Air Cleaning Required | RACT |

* Degree of air cleaning required will be specified by the Commissioner.

Table 4: Permissible Emission Rate Based on Process Weight For Solid Particulate Emissions (Environmental Rating B or C)

| Process Weight Per Hour | Permissible Emission Rate | |
|-------------------------|---------------------------|--|
| | (lb/h) Existing Source | (lb/h) New Source of Modification |
| 100 | 0.51 | 0.51 |
| 500 | 1.5 | 1.5 |
| 1000 | 2.4 | 2.4 |
| 5000 | 6.8 | 6.8 |
| 10,000 | 11 | 11 |
| 25,000 | 20 | 20 |
| 50,000 | 32 | 32 |
| 75,000 | 42 | 42 |
| 100,000 | 51 | 51 |
| 250,000 | 58 | 0.030 gr/scf of undiluted exhaust gas on a dry basis |
| 500,000 | 64 | |
| 750,000 | 68 | |
| 1,000,000 | 71 | |
| 2,000,000 | 78 | |
| 3,000,000 | 88 | |

Table 5: Processes for which Permissible Emission Rate is Based on Process Weight

Stone dryers (asphalt concrete plants)
Expanded aggregate kilns (lightweight aggregate plants)
Continuous process material dryers emitting solid particulates and water only
Brass and bronze melting furnaces
Ferro alloy production furnaces
Lime kilns
Glass production furnaces
Graphitizing and silicon carbide furnaces
Gypsum dryers
Primary aluminum reduction furnaces

Appendix 1-8

Permissible Emission Rates for Stationary Combustion Installations Burning Solid Fuel

(Source: 6 NYCRR 227-1.2) [Revised January 2000; Revised January 2001]

| Total heat input (MBtu/h) | Permissible emission rate (MBtu/h) | Total heat input (MBtu/h) | Permissible emission rate (MBtu/h) |
|------------------------------|--|------------------------------|--|
| 1 to 10 | 0.60 | 600 | 0.24 |
| 20 | 0.52 | 700 | 0.24 |
| 30 | 0.47 | 800 | 0.23 |
| 40 | 0.44 | 900 | 0.22 |
| 50 | 0.42 | 1,000 | 0.22 |
| 60 | 0.41 | 2,000 | 0.19 |
| 70 | 0.39 | 3,000 | 0.17 |
| 80 | 0.38 | 4,000 | 0.16 |
| 90 | 0.37 | 5,000 | 0.15 |
| 100 | 0.36 | 6,000 | 0.15 |
| 200 | 0.31 | 7,000 | 0.14 |
| 300 | 0.29 | 8,000 | 0.14 |
| 400 | 0.27 | 9,000 | 0.13 |
| 500 | 0.25 | 10,000 | 0.13 |

* Installations having a maximum heat input less than 1 MBtu/h are exempted.

** Maximum heat input capacity between 10 - 10,000 MBtu/h: Use $E = 1.0/p[0.22]$ to determine the permissible emission rate where E = permissible emission rate in lb/MBtu and p = maximum heat input capacity in Mbtu/h.

Appendix 1-9

Control Requirements for Major Sources of NO_x

(Source: 6 NYCRR 227-2.4) [Revised March 2003; Revised March 2003; Revised March 2004]

**Table 1
Very Large Boilers**

(Source: 6 NYCRR 227-2.4(a))

| Presumptive NO_x RACT limits (lb NO_x/MBtu) | | | | |
|--|-----------------------------|-------------|----------------|----------------|
| Primary Fuel Type | Boiler Configuration | | | |
| | Tangential | Wall | Cyclone | Stokers |
| Gas Only | 0.20 | 0.20 | na | na |
| Gas/Oil | 0.25 | 0.25 | 0.43 | na |
| Coal Wet Bottom | 1.00 | 1.00 | 0.60 | na |
| Coal Dry Bottom | 0.42 | 0.45 | na | 0.30* |

*This emission limit is 0.33 lb/MBtu when at least 25 percent other solid fuels (e.g., tire derived fuel, waste wood), on a Btu basis, are utilized.

1. Compliance with this emission limit shall be determined on a 24-h heat input weighted average in accordance with the testing and monitoring provisions of this section (see Appendix 1-10). From October 1st through April 30th, a 30-day rolling heat input weighted average may be used to demonstrate compliance.
2. For very large boilers with configurations other than those listed above, or which are fired primarily with fuels not listed above, the owner/operator must submit, as part of the compliance plan, a proposal for RACT to be implemented that includes:
 - the available NO_x control technologies, the projected effectiveness of the technologies considered, and the costs for installation and operation
 - the technology and the appropriate emission limit selected as RACT considering the costs for installation and operation of the technology.

**Table
2 Large Boilers**

(Source: 6 NYCRR 227-2.4(b))

| Presumptive NO_x RACT limits (lb NO_x/MBtu) | |
|--|-----------------------|
| Fuel Type | Emission Limit |
| Gas Only | 0.20 |
| Gas/Oil | 0.30 |
| Pulverized Coal | 0.50 |
| Coal (Overfeed Stoker) | 0.30* |

*This emission limit is 0.33 lb/MBtu when at least 25 percent other solid fuels (e.g., tire derived fuel, waste wood), on a Btu basis, are utilized.

1. Compliance with this emission limit shall be determined with a 1-h average in accordance with the testing and monitoring provisions of this section (see Appendix 1-10), unless the owner/operator opts to utilize continuous emission monitoring systems (CEMS). If CEMS are utilized, the requirements of section 227-2.6(b) apply, including the use a 24-h averaging period.
2. For large boilers fired primarily with fuels not listed above (e.g., wood), the owner/operator must submit, as part of the compliance plan, a proposal for RACT to be implemented that includes:
 - the available NO_x control technologies, the projected effectiveness of the technologies considered, and the costs for installation and operation
 - the technology selected as RACT considering the costs for installation and operation of the technology.

Table 3
Mid-Size Boilers
 (Source: 6 NYCRR 227-2.4(c))

To comply with NO_x RACT requirements, the owner/operator of a mid-size boiler must comply with one of two sets of requirements: Emission Limits or Control Technology:

A. Emission Limits:

| Presumptive NO_x RACT Limits (lb NO_x/MBtu) | |
|--|-----------------------|
| Fuel Type | Emission Limit |
| Gas Only | 0.10 |
| Distillate Oil | 0.12 |
| Residual Oil | 0.30 |

Compliance with this emission limit shall be determined with a 1-h average in accordance with the testing and monitoring provisions of this section (see Appendix 1-10), unless the owner/operator opts to utilize continuous emission monitoring systems (CEMS). If CEMS are utilized, a 24-h averaging period will be used.

B. Control Technology: By 31 May 1995 owners/operators of mid-size boilers must have in place the following technology:

1. Boilers fired with natural gas, distillate oil or a combination of these fuels must utilize low NO_x burners.
2. Boilers fired primarily with residual oil must utilize low NO_x burners and flue gas recirculation utilizing at least 10 percent recirculation.
3. For boilers fired primarily with fuels not listed above, and for boilers where physical constraints make it impossible or impractical to apply the prescribed control technology, the owner/operator must submit, as part of the compliance plan, a proposal for RACT to be implemented that includes:
 - the available NO_x control technologies, the projected effectiveness of the technologies considered, and the costs for installation and operation
 - the technology and the appropriate emission limit selected as RACT considering the costs for installation and operation of the technology.

Table 4
Small Boilers
 (Source: 6 NYCRR 227-2.4(d))

1. Owners/operators of a small boiler must annually perform a tune-up.
2. Owners/operators must maintain in a permanently bound log book (or other format approved in writing by the Department), the following information:
 - the date of the last tune-up
 - the name, title and affiliation of the person who made the adjustments
 - any other information the Department may require as part of the permit.

Table 5
Combustion Turbines
 (Source: 6 NYCRR Section 227-2.4(e))

Owners/operators of combustion turbines with maximum heat input rates of 10 MBtu/h or greater must comply with the following emission limits:

1. For simple cycle and regenerative combustion turbines: 50 ppm on a dry volume basis (ppmvd), corrected to 15 percent oxygen, for sources designed to burn gas only; and 100 ppmvd corrected to 15 percent oxygen, for sources capable of firing multiple fuels.

2. For combined cycle combustion turbines: 42 ppmvd, corrected to 15 percent oxygen, when firing gas; and 65 ppmvd, corrected to 15 percent oxygen, when firing oil. For sources with a duct burner, compliance will be based on the combination of the turbine and the duct burner when both fire, and the turbine alone when not duct firing.
3. For combustion turbines firing primarily with fuels not listed above the owner/operator submit a proposal for RACT to be implemented that includes:
 - the available NO_x control technologies, the projected effectiveness of the technologies considered, and the costs for installation and operation
 - the technology and the appropriate emission limit selected as RACT considering the costs for installation and operation of the technology.
4. For peaking combustion turbines that operate fewer than 500 h during the period of September 16th to April 30th, the emission limits in paragraphs (1) and (2) above are applicable only during the period May 1st through September 15th.

Compliance with these emission limits shall be determined with a 1 h average in accordance with the testing and monitoring provisions of this section (see Appendix 1-10), unless the owner/operator opts to utilize continuous emission monitoring systems (CEMS). If CEMS are utilized, a 24-h averaging period will be used.

Table 6
Stationary Internal Combustion Engines
 (Source: 6 NYCRR 227-2.4(f))

Owners/operators of a stationary internal combustion engine of 200 hp or larger in the severe ozone nonattainment area, and 400 hp in the rest of the state, which provides primary power or is used for peak shaving generation, must comply with the following emission limits:

1. For rich burn engines, 2.0 g/brake hp-h through March 31, 2005 and 1.5 g/brake hp-h beginning April 1, 2005.
2. For lean burn engines:
 - spark-ignited sources fitting gas
 - 3.0 g/brake hp-h for gas only fired units through March 31, 2005
 - 1.5 g/brake hp-h beginning April 1, 2005
 - compression ignition sources
 - 9.0 g/brake hp-h for units firing other fuels through March 31, 2005
 - 2.3 g/brake hp-h beginning April 1, 2005
 - sources firing landfill gas or digester gas
 - 9.0 g/brake hp-h for units firing other fuels through March 31, 2005
 - 2.0 g/brake hp-h beginning April 1, 2005

Compliance with these emission limits shall be determined with a 1 h average in accordance with the testing and monitoring provisions of this section (see Appendix 1-10), unless the owner/operator opts to utilize continuous emission monitoring systems (CEMS). If CEMS are utilized, a 24-h averaging period will be used.

Any internal combustion engine may utilize an emission limit which reflect a 90 percent of greater NO_x reduction fro the engines' actual 1990 baseline emissions, if such emissions baseline exists.

Emergency power generating stationary internal combustion engines, and engine test cells at engine manufacturing facilities that are utilized for either research and development purposes, reliability testing, or quality assurance performance testing are exempt from the requirements of this subdivision.

Table 7
Other Combustion Sources
(Source: 6 NYCRR 227-2.4(g))

Any owner or operator of a major source of NO_x or a combustion installation which is part of a facility that is a major source of NO_x, but is not addressed by a specific subdivision of this section, or is of a source-type not regulated by 6 NYCRR Parts 212, 214, 216, 219, 220 or 224, must submit, as part of the compliance plan, a proposal for RACT to be implemented by 31 May 1995 that includes:

- the available NO_x control technologies, the projected effectiveness of the technologies considered, and the costs for installation and operation for each of the technologies
- the technology and the appropriate emission limit selected as RACT considering the costs for installation and operation of the technology
- testing, monitoring and reporting procedures.

A RACT analysis is not required for combustion installations with an emission rate potential for NO_x of less than 3.0 lb/h and actual emissions in the absence of control equipment of less than 15.0 lb/day.

Appendix 1-10

Testing, Monitoring, and Reporting Requirements

(Source: 6 NYCRR 227-2.6) [Revised January 2000; Revised March 2005]

(a) 'Applicability.' The owner or operator of each source must verify NO_x emissions by performing the applicable testing procedure detailed below:

- (1) For any very large boiler, NO_x emissions must be measured with a CEMS as described in subdivision (b) of this section or with an equivalent monitoring system approved by the department.
- (2) For any other combustion installation covered by this subdivision, except those covered under paragraph (5) of this subdivision, NO_x emissions may be measured with a CEMS as described in subdivision (b) of this section or with an equivalent monitoring system approved by the department in lieu of the monitoring requirements described below.
- (3) For any large boiler, NO_x emissions must be measured in accordance with emission test requirements described in subdivision (c) of this section.
- (4) For any mid-size boiler complying with the presumptive RACT emission limits in section 227-2.4(c)(2) of this Subpart, NO_x emissions must be measured in accordance with the emission test requirements described in subdivision (c) of this section.
- (5) For any combined cycle combustion turbine having a maximum heat input rate greater than 250 million Btu per hour, NO_x emissions must be measured with a CEMS as described in subdivision (b) of this section.
- (6) For any simple cycle, regenerative combustion turbine and any combined cycle combustion turbine having a maximum heat input rate of 250 million Btu per hour or less, NO_x emissions must be measured in accordance with the emission test requirements as described in subdivision (c) of this section.
- (7) For any stationary internal combustion engine, NO_x emissions must be measured in accordance with the emission test requirements as described in subdivision (c) of this section.
- (8) For any NO_x source subject to subdivision 227-2.4(g) of this Subpart NO_x emissions must be measured pursuant to a testing, monitoring, and reporting protocol that has been proposed by the owner or operator and is consistent with the applicable requirements for sources regulated under this Subpart that have comparable heat input ratings. The proposed protocol is subject to approval by the department and the Administrator.

(b) 'CEMS requirements.'

- (1) The owner or operator of a source subject to paragraph (a)(1), (2) or (5) of this section that is obligated to submit a compliance plan required under section 227-2.3(a) and (b) of this Subpart must submit for department approval:
 - (i) a preliminary CEMS plan as part of the compliance plan if it has a CEMS in place, or are in the process of procuring or installing a CEMS;
 - (ii) a preliminary CEMS plan at least 180 days prior to equipment installation. The Department will notify the owner or operator of the acceptability of the plan, at least 60 days prior to equipment installation if it is not covered under subparagraph (i) of this paragraph; or
 - (iii) a proposed equivalent monitoring plan.
- (2) The owner or operator of a source subject to paragraph (a)(1), (2) or (5) of this section that is obligated to submit a compliance plan required under section 227-2.3(a) and (b) of this Subpart must submit a CEMS certification protocol at least 60 days prior to compliance testing. The location of and specifications for each instrument or device, as well as procedures for calibration, operation, data evaluation and data reporting, must be approved by the department.
- (3) The owner or operator of a source subject to paragraph (a)(1), (2) or (5) of this section must install, calibrate, maintain, and operate a CEMS for measuring NO_x at locations approved in the CEMS certification protocol under paragraph (2) of this subdivision, and must record the output of each such system. The following procedures and test methods must be used for determining compliance with the appropriate NO_x emission limit under section 227-2.4 of this Subpart:
 - (i) The owner or operator of a source subject to paragraphs (a)(1) and (2) of this section must:
 - (a') calculate all 24-hour daily heat input-weighted average NO_x emission rates from block hourly arithmetic emission rate averages calculated by the CEMS and expressed in terms of pounds of NO_x per million Btu;

- (b) demonstrate compliance with the appropriate emission limit under section 227-2.4 by using a CEMS for measuring NO_x and calculating a 24-hour daily heat input-weighted average NO_x emission rate using 40 CFR Part 60, Appendix A, Method 19 for nonturbine sources. A 30-day rolling heat input-weighted average emission rate may be used to demonstrate compliance with the appropriate emission limit under section 227-2.4 of this Subpart from October 1 to April 30 for nonturbine sources; and
 - (c) determine the 24-hour daily heat input-weighted average NO_x emission rate based on the arithmetic average of the block hourly heat input-weighted average emission rates during each 24 hour daily period from 12:00 midnight to 12:00 midnight the following day using CEMS data. The block hourly heat input-weighted average emission rate must be calculated for each one hour period starting with the period 12:00 midnight to 1:00 am and continuing through until the last period 11:00 pm to 12:00 midnight; or, starting with the period 12:00 noon to 1:00 pm and continuing through the last period 11:00 am to 12:00 noon. The 30 day rolling heat input-weighted average must be the average of the 24 hour daily heat input-weighted NO_x emission rate for a 30 day period; and
 - (ii) The owner or operator of a source subject to paragraph (a)(5) of this section must calculate:
 - (a) block hourly arithmetic average emission rates using data points generated by CEMS and expressed in terms of parts per million on a dry volume basis, corrected to 15 percent oxygen; and
 - (b) block hourly arithmetic average emission rates for the periods starting 12:00 midnight to 1:00 a.m., 1:00 a.m. to 2:00 a.m., and so on.
 - (iii) At a minimum, valid CEMS data must be obtained for 90 percent of the operating hours in each calendar quarter that the subject facility is operating.
 - (iv) All valid CEMS data must be used in calculating emission rates even if the minimum data requirements of subparagraph (iii) of this paragraph are not met.
 - (v) The procedures under 40 CFR 60.13, Appendix B, Performance Specification 2; and any additional criteria specified by the Department must be followed for the installation, evaluation, and operation of the CEMS.
 - (vi) Annual recertifications, quarterly accuracy, and daily calibration drift tests must be performed in accordance with 40 CFR Part 60, Appendix F. CEM sources subject to 40 CFR part 75 and/or Part 204 of this Title must follow the procedures in those programs, and any additional data requirements determined appropriate by the department.
 - (vii) When NO_x emission data are not obtained because of CEMS downtime, emission data shall be obtained by using the 90th percentile value of all CEMS NO_x emission data collected over the last 180 days. Alternatively the owner or operator of a facility subject to part 75 and/or Part 204 may utilize 40 CFR part 75 data substitution procedures for periods when no valid CEMS data is available.
- (4) CEMS recordkeeping and reporting requirements.
- (i) The owner or operator of a source subject to paragraphs (a)(1), (2) and (5) of this section who applies for a permit pursuant to section 227-2.3 of this Subpart must notify the department of the planned initial start-up date.
 - (ii) Protocols, reports, summaries, compliance plans and schedules, and any other information required to be submitted to the Department under provisions of this Subpart must be sent as follows:
 - (a) One copy to the Division of Air Resources, New York State Department of Environmental Conservation, 50 625 Broadway, Albany, New York 12233; and
 - (b) One copy to the regional air pollution control engineer at the appropriate regional office of the Department.
 - (iii) Emissions, monitoring, and operating parameter records or measurements required by this Subpart, quarterly and annual summaries, and any additional parameters required by the department must be maintained for at least three years and made available upon department request within ten working days.
 - (iv) Following each calendar quarter, the owner or operator of a source subject to paragraphs (a)(1), (2) and (5) of this section, must tabulate and summarize applicable emission, monitoring, and operating parameter measurements recorded during the preceding three months (including but not limited to type and amount of fuel burned on a daily basis, heat content of the fuel, total heating value of the fuel consumed on a daily basis, the actual NO_x emission rate, the allowable NO_x emission rate and the summation of the sources included in the averaging scheme). These records must be submitted within 30 days following the end of each calendar quarter in a format acceptable to the department, and include:

- (a) the average NO_x emission rates as specified under paragraph (b)(3). (For sources covered under paragraphs (a)(1) and (2) of this section, block hourly average emission rates are to be recorded and tabulated, but do not need to be included in the quarterly summaries);
 - (b) identification of the operating hours when NO_x emissions data are not included in the calculation of the average emission rate and the reasons for not including that data; and
 - (c) the results of accuracy assessments as required by 40 CFR Part 60, Appendix F and any additional data quality information required by the department.
- (v) The owner or operator of a source subject to paragraphs (a)(1), (2) and (5) must submit the initial compliance test data, the performance evaluation of the CEMS found in 40 CFR Part 60, Appendix B, and the maximum heat input capacity.
- (5) CEMS requirements for sources subject to 40 CFR part 75 and/or Part 204 of this Title. The owner or operator of a source (except those subject to the requirements of section 227-2.6(b)(3)(vii) of this Subpart) subject to the Acid Rain Program monitoring (40 CFR part 75) and/or the NO_x Budget Trading Program (Part 204 of this Title) must follow the procedures specified in those programs in order to demonstrate compliance with this Subpart. The owner or operator must, by using the methods described in clause (3)(i)(b) of this subdivision, determine compliance with emission rates that are calculated and reported as 24-hour daily averages.
- (c) 'Emission test requirements.' The owner or operator of a source required to conduct an emission test under subdivision (a) of this section must:
 - (1) Submit a compliance test protocol to the department for approval at least 30 days prior to emission testing. The conditions of the testing and the locations of the sampling devices must be acceptable to the department; and
 - (2) utilize the following procedures set forth in 40 CFR Part 60, Appendix A or any other method acceptable to the department and the Administrator for determining compliance with the appropriate NO_x limit in section 227-2.4 of this Subpart, and must, in addition, follow the procedures set forth in Part 202 of this Title:
 - (i) For large and mid-size boilers, utilize Method 7, 7E, or 19 from 40 CFR Part 60, Appendix A or another reference method approved by the department.
 - (ii) For simple cycle combustion turbines, utilize Method 20 from 40 CFR Part 60, Appendix A or another reference method approved by the department.
 - (iii) For combined cycle combustion turbines, utilize Method 7, 7E, 19 or 20 from 40 CFR Part 60, Appendix A or another reference method approved by the department.
 - (iv) For stationary internal combustion engines, utilize Method 7, 7E, or 19 from 40 CFR Part 60, Appendix A or another reference method approved by the department.
 - (3) submit a compliance test report containing the results of the emission test to the department no later than 60 days after completion of the emission test.

Appendix 1-11

**Particulate Matter Emission Rate for Existing Incinerators, Excluding
New York City, Nassau and Westchester Counties**

(Source: 6 NYCRR 219-5.2)

(NOTE: This appendix is in graphic format. If the incinerator's particulate matter emission limits are not contained in its permit, a copy can be obtained from Carolyn O'Rourke at USACERL, 1-800-872-2375.)

Appendix 1-12

Particulate Matter Emission Rate for Existing Incinerators, New York City, Nassau and Westchester County (Source: 6 NYCRR 219-6.2)

(NOTE: This appendix is in graphic format. If the incinerator's particulate matter emission limits are not contained in its permit, a copy can be obtained from Carolyn O'Rourke at USACERL, 1-800-872-2375.)

Appendix 1-13

Sulfur-in-Fuel Limitations

(Source: 6 NYCRR 225-1.2(d)) [Revised January 1998]

| Area | Oil (maximum percent sulfur by weight) | Solid Fuel (pounds of sulfur per MBtu gross heat content) | |
|---|---|--|--|
| | Residual | | Distillate |
| New York City | 0.30 | 0.20 | 0.2 MAX |
| Nassau, Rockland, and Westchester Counties | 0.37 | 0.37 | 0.2 MAX |
| Suffolk County: Towns of Babylon, Brookhaven, Huntington, Islip, and Smith Town | 1.00 | 1.00 | 0.6 MAX |
| Erie County: City of Lackawanna and South Buffalo* | 1.10 | 1.10 | 1.7 MAX/1.4 AVG** |
| Niagara County and remainder of Erie County | 1.50 | 1.50 | 1.7 MAX/1.4 AVG** |
| Remainder of state | 1.50 | 1.50 | 2.5 MAX/1.9 AVG** 1.7 Annual AVG*** |
| | | | |

* South Buffalo is defined as the area in the City of Buffalo south of a line from the intersection of IR 190 and Route 5 and proceeding along IR 190 to the city line.

** Averages are figured by dividing total sulfur content by total gross heat content of all solid fuel received in a consecutive 3-mo period.

*** Annual averages are figured by dividing total sulfur content by total gross heat content of all solid fuel received during any consecutive 12-mo period.

Appendix 1-14

Ventilation Emission Points for Perchloroethylene Dry Cleaning Facilities

(Source: 6 NYCRR 232.6(b)(3) and (6)) [Added January 1998]

1. Existing stand-alone facilities -- retrofitting of equipment.
 - a. Transfer machines -- no retrofitting is allowed. All transfer machines must be removed from service on the following schedule.
 - i. If the process ventilation emission point is located above the roof and more than 25 ft from all openings in nearby occupancies, and if previously retrofitted to meet the less than 100 ppm per cent vented emission level (see subparagraph (a)(4)(ii) of this section) and is operating in compliance with that emission level, the equipment must be replaced with third or fourth generation equipment by January 1, 2000.
 - ii. If the process ventilation emission point is located below the roof or less than 25 ft from any opening in a nearby occupancy, or if process ventilation emissions do not meet the 100 ppm per cent emission level, the equipment must be replaced with third or fourth generation equipment within six months after the effective date of this Part.
 - iii. Vapor barrier -- not required.
 - iv. General exhaust ventilation system -- Optional.
 - b. Dry-to-dry vented (Second generation)
 - i. Vapor barrier -- Not required.
 - ii. General exhaust ventilation system -- Optional.
 - iii. Process ventilation emission point location:
 - (1) If the process ventilation emission point is above the roof and more than 25 ft from all openings in nearby occupancies, the relocation of the process ventilation emission point is not required.
 - (2) If the process ventilation emission point is below the roof or less than 25 ft from any opening in a nearby occupancy, the process ventilation emission point must be changed to be over the roof and more than 25 ft from all openings in nearby occupancies within six months after the effective date of this Part. Alternatively, the equipment may be replaced with third or fourth generation equipment within the same time limit.
 - iv. Emission controls
 - (1) Controlled
 - (a) If the machine has been controlled with either an azeotropic control device plus small carbon adsorber or converted to a closed-loop third generation machine having an integral or external primary refrigerated condenser (the water cooled condensing system having been eliminated) and has a door fan, meeting the requirements of paragraph (a)(3) of this section, no additional control is required.
 - (b) If the machine is equipped with either a full sized carbon adsorber or a refrigerated condenser with a water cooled condensing system, it must be retrofitted with either an azeotropic control device plus small carbon adsorber (provided EPA publishes a determination that an azeotropic control device is equivalent to a refrigerated condenser), or converted to a closed-loop third generation machine by adding an integral or external primary refrigerated condenser (eliminating the water cooled condensing system) and a door fan with a small carbon adsorber by December 31, 1999. Alternatively, the equipment may be replaced with a third generation machine with a door fan by December 31, 1999, or with a fourth generation by January 1, 2001.
 - (2) Uncontrolled. Equipment must be retrofitted with either an azeotropic control device plus small carbon adsorber (provided EPA publishes a determination that an azeotropic control device is equivalent to a refrigerated condenser), or converted to closed-loop third generation by adding an integral or external primary refrigerated condenser (eliminating the water cooled condensing system) and a door fan with a small carbon adsorber within six months after the effective date of this Part. Alternatively, equipment may be replaced with third or fourth generation equipment within the same time limit.

- v. Fugitive perc emissions from any part of the dry cleaning system, must not exceed 50 ppm at any time.
- c. Dry-to-dry non-vented. Third generation:
 - i. Vapor barrier -- Not Required.
 - ii. General exhaust ventilation system -- Optional.
 - iii. Equipment must be retrofitted with a door fan meeting the requirement of paragraph (a)(3) within four yr after the effective date of this Part; or,
 - iv. An additional option would be to convert this type of equipment to a fourth generation machine that achieves a perc concentration of less than or equal to 300 ppm in the drum within four yr after the effective date of this Part. Under this option a door fan would not be required.
 - v. Fugitive perc emissions from any part of the dry cleaning system must not exceed 50 ppm at any time.
- d. Dry-to-dry non-vented. Fourth generation.
 - i. Vapor barrier -- Not Required.
 - ii. General exhaust ventilation system -- Optional.
 - iii. Primary and secondary control system and drying sensors must meet requirements specified in paragraphs (a)(5) and (6) of this section. However, for non-major facilities that purchased machines prior to the effective date of this Part the following provision applies: If the owner/manager or operator can demonstrate that the machine is operating in the best possible working condition, no action is required if the measured perc concentration in the drum is less than 500 ppm. If the level exceeds 500 ppm, a door fan that meets the requirements of paragraph (a)(3) of this section must be installed by January 1, 2000.
 - iv. Fugitive perc emissions from any part of the dry cleaning system must not exceed 50 ppm at any time
- 2. Existing mixed-use facilities -- retrofitting of equipment.
 - a. Transfer machines. No emission control retrofitting is allowed. All transfer machines must be removed from service on the following schedule.
 - i. If the process ventilation emission point is located above the roof and more than 25 ft from all openings in nearby occupancies, and if the equipment has been previously retrofitted to comply with the less than 100 ppm perc vented emission level (see subparagraph (a)(4)(ii) of this section) and is operating in compliance with that emission level, the equipment must be removed from service by September 22, 1998.
 - ii. If the process ventilation emission point is not above the roof and more than 25 ft from all openings in nearby occupancies, or if the equipment has not previously been retrofitted or is not in compliance with the less than 100 ppm perc emission level (see subparagraph (a)(4)(ii) of this section), the equipment must be removed from service within six months after the effective date of this Part.
 - iii. A vapor barrier and general exhaust ventilation system are required within six months after the effective date of this Part as specified in paragraphs (a)(1) and (2) of this section.
 - b. Dry-to-dry vented. Second generation.
 - i. Vapor barrier and general exhaust ventilation system -- Required within 15 months of the effective date of this Part as specified in paragraphs (a)(1) and (2) of this section.
 - ii. Process vent emission location
 - (1) If the process ventilation emission point is above the roof and more than 25 ft from all openings in nearby occupancies, the relocation of the process ventilation emission point is not required.
 - (2) If the process ventilation emission point is below the roof or less than 25 ft from any opening in a nearby occupancy, change the process ventilation emission point to be over the roof and more than 25 ft from all openings in nearby occupancies within six months after the effective date of this Part. Alternatively, equipment may be replaced with fourth generation equipment within the same time limit.
 - iii. Emission Controls
 - (1) Mixed-use -- commercial -- uncontrolled. Equipment must be retrofitted with either an azeotropic control device plus a small carbon adsorber (provided EPA publishes a determination that an azeotropic control device is equivalent to a refrigerated condenser), or converted to a closed-loop third generation machine by adding an integral or external primary

refrigerated condenser (eliminating the water cooled condensing system) and a door fan as specified in paragraph (a)(3) of this section within six months after the effective date of this Part. Alternatively, equipment may be replaced with fourth generation equipment within the same time limit. The retrofit of this equipment is only an interim measure, and all retrofitted equipment of this type must be removed from service by January 1, 2005.

(2) Mixed-use -- commercial -- controlled.

(a) If the machine has been controlled with either an azeotropic control device plus small carbon adsorber or converted to a third generation machine having an integral or external primary refrigerated condenser (the water cooled condensing system having been eliminated) and has a door fan as specified in paragraph (a)(3) of this section, no interim retrofitting action is required. This equipment must be removed from service and replaced with fourth generation equipment by January 1, 2005.

(b) If the machine is equipped with either a full-sized carbon adsorber or a refrigerated condenser with a water cooled condensing system, it must be retrofitted with either an azeotropic control device plus small carbon adsorber (provided EPA publishes a determination that an azeotropic control device is equivalent to a refrigerated condenser), or converted to a third generation machine by adding an integral or external primary refrigerated condenser (eliminating the water cooled condensing system) and a door fan as specified in paragraph (a)(3) of this section by January 1, 2001. Alternatively, equipment may be replaced with fourth generation equipment by January 1, 2001. The retrofit of this equipment is an interim measure only and all retrofitted equipment must be replaced with fourth generation equipment by January 1, 2005.

(3) Mixed-use -- residential -- uncontrolled. Equipment must be retrofitted with either an azeotropic control device plus small carbon adsorber (provided EPA publishes a determination that an azeotropic control device is equivalent to a refrigerated condenser), or converted to third generation equipment by adding an integral or external primary refrigerated condenser (eliminating the water cooled condensing system) and a door fan as specified in paragraph (b)(3) of this section within six months after the effective date of this Part. Alternatively, the equipment must be replaced with fourth generation equipment within the same time limit. The retrofit of this equipment is only an interim measure and all retrofitted equipment of this type must be removed from service by January 1, 2000.

(4) Mixed-use -- residential -- controlled.

(a) If the machine has been controlled with either an azeotropic control device plus a small carbon adsorber or has been converted to a third generation machine having an integral or external primary refrigerated condenser (the water cooled system having been eliminated) and has a door fan as specified in paragraph 232.6(b)(3) of this section, no additional retrofitting is required. However, all equipment of this type must be replaced with fourth generation equipment by January 1, 2000.

(b) If the machine is equipped with a full-sized carbon adsorber with a water cooled condensing system, it must be operated in compliance with the 100 ppm standards of the previous regulations and must be replaced with fourth generation equipment by January 1, 2000.

iv. Fugitive perc emissions from any part of the dry cleaning system must not exceed 50 ppm at any time.

c. Dry-to-dry non-vented. Third generation

i. Vapor barrier and general exhaust ventilation system -- Required within 18 months of the effective date of this Part as specified in paragraphs 232.6(a)(1) and (2) of this section.

ii. Equipment must be retrofitted with a door fan meeting the requirements of paragraph 232.6(a)(3) of this section within four yr after the effective date of this Part; or, ([c]) An additional option is to convert this piece of equipment to a fourth generation machine that achieves a perc concentration of less than or equal to 300 ppm in the machine drum within four yr after the effective date of this Part. Under this option a door fan would not be required.

iii. Fugitive perc emissions from any part of the dry cleaning system must not exceed 50 ppm at any time.

d. Dry-to-dry non-vented. Fourth generation.

- i. Vapor barrier and general exhaust ventilation system -- Required within two yr of the effective date of this Part as specified in paragraphs 232.6(a)(1) and (2) of this section.
- ii. Primary and secondary controls and drying sensor -- Required as specified in paragraphs 232.6(a)(5) and (6) of this section. However, for non-major facilities that purchased machines prior to the effective date of this Part the following provision applies: If the owner/manager or operator can demonstrate that the machine is operating in the best possible working condition, no action is required if the measured perc concentration in the drum is less than 500 ppm. If the level exceeds 500 ppm, a door fan as specified in paragraph 232.6(a)(3) of this section is required.
- iii. Fugitive perc emissions from any part of the dry cleaning system must not exceed 50 ppm at any time.

Appendix 1-15

Public Notice for Perchloroethylene Dry Cleaning Facilities
(Source: 6 NYCRR 232.18) [Added January 1998; Citation Revised March 2008]

New York State Department of Environmental Conservation

NOTICE

This dry cleaning facility uses the chemical commonly called perc (it's also called tetrachloroethene, tetrachloroethylene or perchloroethylene).

You may request information from this dry cleaner about inspections that may have been conducted at this facility, including indoor air testing.

You may contact the New York State Department of Environmental Conservation if you smell chemical odors or see liquid leaking from the dry cleaning operations at (include phone number).

If you want more information about indoor air testing or health effects of exposure to perc, call your local health department at (include phone number) or the New York State Department of Health toll free at (include phone number).

Name of dry cleaning facility:

NYSDEC or NYCDEP permit or registration number:

Address of facility:

Owner of facility:

If Emergency, contact:

Appendix 1-16

Regulated Coating Lines and Volatile Organic Compound (VOC) Content Limits

(Source: 6 NYCRR 228.1 (e), 228.7, 228.8, and 228.9) [Revised March 2004]

This Appendix consists of 2 tables and a list of exempted coating lines. For any "Process" and "Description of Products" not specifically listed, the Department will determine, based on inspections of the process, emission source, and product to be coated, the maximum permitted pounds of VOC per gallon, minus water and excluded VOC, of coating at application.

Table 1 (Source: 6 NYCRR 228.7)

| Process/Emission Source | Description of Products | Maximum permitted pounds of VOC per gal of coating at application (minus water and excluded VOC) |
|--|--|--|
| Large Appliance Coating Lines | Residential and commercial washers, refrigerators, freezers, water heaters, dishwashers, trash compactors, air conditioners. | 2.8 |
| Magnetic Wire Insulation Coating Lines | Enameling or varnish of aluminum or copper wire for use in electrical machinery to create an electromagnetic field. | 1.7 |
| Metal Furniture Coating Lines | Metal parts used in household, business and institutional furniture such as but not limited to tables, chairs, wastebaskets, beds, lighting fixtures, shelves, room dividers, bathroom dividers. | 3.0 |
| Metal Can Coating Lines | Sheet basecoat -- exterior and interior over-varnish | 2.8 |
| | Two-piece can exterior (basecoat and over-varnish) | 2.8 |
| | Two- and three-piece can interior body spray | 4.2 |
| | Two-piece can exterior end (spray or roll coat) | 4.2 |
| | Three-piece can side-seam spray | 5.5 |
| | End sealing compound | 3.7 |
| Fabric Coating Lines | Fabric coatings, such as but not limited to: rubber, used for rainwear, tents, industrial gaskets. | 2.9 |
| Vinyl Coating | Printing, decorations or protecting coats over vinyl-coated lines fabric or vinyl sheets. | 3.8 |
| Paper Coating Lines | Paper, pressure-sensitive tape regardless of substance (including paper, fabric or plastic film) and related web coating processes on plastic film such as but not limited to: typewriter ribbons, photographic film and magnetic tape. Also metal foil gift wrap and packaging. | 2.9 |
| Process/Emission Source | Description of Products | Maximum permitted pounds of VOC per gal of coating at application (minus water and excluded VOC) |
| Automobile Assembly Coating Lines | Automobiles and light-duty trucks, exterior and main body sheet metal parts excluding nonmetallic parts. | |
| | Prime coat | |

| Process/Emission Source | Description of Products | Maximum permitted pounds of VOC per gal of coating at application (minus water and excluded VOC) |
|--|--|---|
| | Primer-Surfacer Top coats Repair coat | 1.9 2.8 2.8 4.8 |
| Coil Coating Lines | Flat metal sheet from a coil or roll which is coated and later used for items such as but not limited to: cans, appliances, roof decks, siding, cars, gutters. | 2.6 |
| Coating Lines for Miscellaneous Metal Parts and Produces | Large farm machinery, small farm and garden machinery, small appliances, commercial and office machinery, computer equipment, industrial machinery, fabricated metal products and any other industrial category which coats miscellaneous metal machinery, instruments or equipment, excluding all nonmetallic parts. Clear coatings Coating application system is air dried or forced warm air dried at temperature up to 90 °C Extreme performance coatings designed for harsh exposure or extreme environmental conditions. All other misc. metal parts and products coatings | 4.3 3.5 3.5 3.0 |
| Coating Lines for Flat Wood Surface Finishing | Printed interior panels made of hardwood, plywood, and thin particle board Natural finish hardwood plywood panels Hardboard paneling | 2.5 3.3 3.6 |

Table 2 (Source: 6 NYCRR 228.8)

| Process/Emission Source | Description of Products | Maximum permitted pounds of VOC per gal of coating at application (minus water and excluding VOC) |
|--------------------------------|---|--|
| Wood Coating Lines | Coated room furnishings, such as but not limited to cabinets (kitchen, bath and vanity), tables, chairs, beds, sofas, shutters, art objects and any other coated product made of solid wood composition or wood material. Semi transparent stain Wash coat Opaque stain Sealer Pigmented coat Clear topcoat | 6.8 6.1 4.7 5.6 5.0 5.6 |
| Tablet Coating Lines | Formed pharmaceutical products, such as but not | 5.5 |

| Process/Emission Source | Description of Products | Maximum permitted pounds of VOC per gal of coating at application (minus water and excluding VOC) |
|---|--|---|
| | limited to pills, capsules. | |
| Glass Coating Lines | Lamps, incandescent light bulbs and miscellaneous glass products. | 3.0 |
| | Fluorescent bulbs | 4.1 |
| Leather Coating Lines | Leather substrates, such as but not limited to clothing, furniture, automobile components. | 5.8 |
| Miscellaneous Plastic Parts Coating Lines | Plastic parts and products such as but not limited to business and office machine parts, toys, sporting goods, architectural structures such as doors and window frames, automotive interior parts; automotive exterior parts, both flexible and rigid; musical equipment housings; and other miscellaneous plastic parts. | |
| | Color topcoat | 3.8 |
| | Clear coat | 4.8 |
| Aerospace Coating Lines | Aerospace components, including but not limited to assembly of parts or completed unit of any aircraft, helicopter, or missile. | |
| | Primer | 2.9 |
| | Topcoat | 5.1 |
| Motor Vehicle Refinishing (Effective until Jan 1, 2005) | Maskant for chemical processing | 5.1 |
| | Automobile, truck or bus coating, including but not limited to repair coats, repainting and touch-ups, except at automobile assembly plants. | |
| | Repair/touchups | 6.2 |
| Mobile Equipment Repair and Refinishing or Color-Matched Coating Line (Effective Jan 1, 2005) | Overall (coating entire vehicle) | 5.0 |
| | Including repainting and repair coats, excluding automotive touch-up repair: | |
| | Automotive pretreatment | 6.5 |
| | Automotive primer-surfacer | 4.8 |
| | Automotive primer-sealer | 4.6 |
| | Automotive topcoat: | |
| | Single stage-topcoat | 5.0 |
| | 2 stage basecoat/clearcoat | 5.0 |
| | 3 or 4-stage basecoat/clearcoat | 5.2 |
| Multi-colored Automotive | 5.7 | |
| | Automotive Specialty | 7.0 |
| Urethane Coating Lines | Urethane substrates that are more than 50 micrometers (0.002 in.) thick, except for resilient floor covering and flexible packaging. | 3.8 |

Exceptions:

1. research and development processes involving surface coating which produce a product for study rather than eventual sale

2. adhesives and materials used to prepare a surface for adhesion where the coating is manually applied without the use of mechanical means
3. sealant or filler used to seal or fill seams, joints, holes and minor imperfections of the surface where the coating is manually applied without the use of mechanical means
4. anticorrosive wax and heat resistant anticorrosive coatings uses in the automobile manufacturing industry to protect door opening seam areas and floor pan areas respectively
5. clear or translucent coatings, applied to clear or translucent plastic substrates which are utilized in the manufacture of backlighted outdoor signs
6. coatings which are applied manually with a brush, roller, or an aerosol spray can
7. aerospace coatings which are utilized for pretreatment, adhesive bonding primers, flight testing, fuel tanks, electric/radiation effects, space vehicles, and temporary mechanical maskant/high temperature heat treatment
8. clear and pearlescent coatings applied to plastic fashion items such as beads, buttons, buckles, or other plastic accessories used in the fashion industry;
9. coatings which are applied to optical lens at facilities whose annual potential to emit volatile organic compounds are less than 10 tons
10. reflective coatings applied to highway cones
11. electromagnetic interference/radio frequency interference (EMI/RFI) coatings applied on plastic electronic equipment to provide shielding against electromagnetic interference, radio frequency interference, or static charge
12. electric dissipating coatings that rapidly dissipate a high-voltage electric charge applied on plastic parts
13. low-use specialty coatings where the plantwide total annual usage is equal to or less than 55 gal provided that
 - records must be maintained on an as used basis in a format acceptable to the Commissioner that document the annual usage
 - motor vehicle refinishing coating lines may qualify for this exemption prior to January 1, 2005
 - beginning January 1, 2005, mobile equipment repair and refinishing or color matched coating lines will not qualify for this exemption;
14. mobile equipment repair and refinishing or color-matched coatings applied to mobile equipment or mobile equipment components if the person applying the coatings does not receive compensation
15. powder coatings
16. prior to January 1, 2005, mobile vehicle refinishing where the facility
 - applies coatings using high volume low pressure spraying with a maximum cap pressure of 10.0 psig
 - cleans spray guns using techniques that minimize VOC emissions
 - uses coatings that do not exceed the appropriate VOC content limits
 - exhausts emissions into appropriate emission control equipment
 - applies coatings to work areas that do not exceed 9.0 square feet
 - uses a quantity of coatings and cleaning solvents on an annual basis that does not exceed 55 gallons.
 (NOTE: The owner or operator of the facility must retain for five years records of the quantity of coatings and cleaning solvents used on an annual basis)
17. beginning January 1, 2005, mobile equipment repair and refinishing or color-matched coatings where the facility:
 - applies coatings using high volume low pressure spraying with a maximum cap pressure of 10.0 psig
 - cleans spray guns using techniques that minimize VOC emissions
 - uses coatings that do not exceed the appropriate VOC content limits
 - exhausts emissions into appropriate emission control equipment
 - applies coatings to work areas that do not exceed 9.0 square feet
 - uses a quantity of coatings and cleaning solvents on an annual basis that does not exceed 55 gallons.
 (NOTE: The owner or operator of the facility must retain for five years records of the quantity of coatings and cleaning solvents used on an annual basis.).

Motor Vehicle Emissions Standards

(Source: 6 NYCRR 217-1.3(d) and (e)) [Revised January 1998]

***Start-up Standards**

Light Duty Vehicles

| Model Year | Hydrocarbon (gr/mi) | | CO (gr/mi) | | NO _x (gr/mi) |
|--------------|---------------------|-------------|--------------|--------------|-------------------------|
| | Composite | Phase 2 | Composite | Phase 2 | Composite |
| 1994+ Tier 1 | 0.80 - 10.00 | 0.50 - 6.00 | 15.0 - 150.0 | 12.0 - 120.0 | 2.0 - 10.0 |
| 1995 | 1.20 - 10.00 | 0.75 - 6.00 | 20.0 - 150.0 | 16.0 - 120.0 | 2.5 - 10.0 |
| 1994 | 1.20 - 10.00 | 0.75 - 6.00 | 20.0 - 150.0 | 16.0 - 120.0 | 2.5 - 10.0 |
| 1993 | 1.20 - 10.00 | 0.75 - 6.00 | 20.0 - 150.0 | 16.0 - 120.0 | 2.5 - 10.0 |
| 1992 | 1.20 - 10.00 | 0.75 - 6.00 | 20.0 - 150.0 | 16.0 - 120.0 | 2.5 - 10.0 |
| 1991 | 1.20 - 10.00 | 0.75 - 6.00 | 20.0 - 150.0 | 16.0 - 120.0 | 2.5 - 10.0 |
| 1990 | 2.00 - 10.00 | 1.25 - 6.00 | 30.0 - 150.0 | 24.0 - 120.0 | 3.0 - 10.0 |
| 1989 | 2.00 - 10.00 | 1.25 - 6.00 | 30.0 - 150.0 | 24.0 - 120.0 | 3.0 - 10.0 |
| 1988 | 2.00 - 10.00 | 1.25 - 6.00 | 30.0 - 150.0 | 24.0 - 120.0 | 3.0 - 10.0 |
| 1987 | 2.00 - 10.00 | 1.25 - 6.00 | 30.0 - 150.0 | 24.0 - 120.0 | 3.0 - 10.0 |
| 1986 | 2.00 - 10.00 | 1.25 - 6.00 | 30.0 - 150.0 | 24.0 - 120.0 | 3.0 - 10.0 |
| 1985 | 2.00 - 10.00 | 1.25 - 6.00 | 30.0 - 150.0 | 24.0 - 120.0 | 3.0 - 10.0 |
| 1984 | 2.00 - 10.00 | 1.25 - 6.00 | 30.0 - 150.0 | 24.0 - 120.0 | 3.0 - 10.0 |
| 1983 | 2.00 - 10.00 | 1.25 - 6.00 | 30.0 - 150.0 | 24.0 - 120.0 | 3.0 - 10.0 |
| 1982 | 2.00 - 10.00 | 1.25 - 6.00 | 60.0 - 150.0 | 48.0 - 120.0 | 3.0 - 10.0 |
| 1981 | 2.00 - 10.00 | 1.25 - 6.00 | 60.0 - 150.0 | 48.0 - 120.0 | 3.0 - 10.0 |

| Model Year | Hydrocarbon (ppm at idle) | CO (percent at idle) |
|----------------|------------------------------|-------------------------|
| 1981 and later | 220 | 1.2 |
| 1979 - 1980 | 300 | 2.5 |
| 1975 - 1978 | 300 | 3.0 |
| 19680 - 1974 | 700 | 6.0 |

* Actual exhaust emission standards shall be set by the department during the start-up phase (a period of up to two years) from the range presented. Initially, these standards will be those recommended by the USEPA as contained in Table 1a in bold print (most stringent). Standards listed are based upon the IM240 test. Other test methods may be used but cutpoints used for other tests will be set to yield the same failures as would be realized using the IM240 test. Standards may be changed within the range for each model yr if repair facilities experience significant problems in repairing failed vehicles to meet standards or if actual failure rates vary substantially from those predicted. The department reserves the right to set adjustment factors for non-gasoline or non-diesel fueled vehicles. The department shall publish notice of any changes to the standards in the Environmental Notice Bulletin.

Light Duty Trucks (6,000 lbs. GVWR or less)

| Model Year | Hydrocarbon (gr/mi) | | CO (gr/mi) | | NO _x (gr/mi) |

(NOTE: 6 NYCRR 210-4 repealed.)

Appendix 1-19

VOC Content Limits for Architectural Coatings

(Source: 6 NYCRR 205.3) [Citation Revised January 1998; Citation Revised March 2006]

| Coating Category | VOC content limit (grams per liter)' |
|--|---|
| Flat coatings | 100 |
| Nonflat coatings | 150 |
| Nonflat - high gloss coatings | 250 |
| Antenna coatings | 530 |
| Antifouling coatings | 400 |
| Bituminous roof coatings | 300 |
| Bituminous roof primers | 350 |
| Bond breakers | 350 |
| Calcimine recoaters | 475 |
| Clear wood coatings | |
| * Clear brushing lacquers | 680 |
| * Lacquers (including lacquer sanding sealers) | 550 |
| * Sanding sealers (other than lacquer sanding sealers) | 350 |
| * Varnishes | 350 |
| * Conversion varnishes | 725 |
| Concrete curing compounds | 350 |
| Concrete surface retarders | 780 |
| Dry fog coatings | 400 |
| Faux finishing coatings | 350 |
| Fire resistive coatings | 350 |
| Fire-retardant coatings | |
| * Clear | 650 |
| * Opaque | 350 |
| Floor coatings | 250 |
| Flow coatings | 420 |
| Form-release compounds | 250 |
| Graphic arts coatings (sign paints) | 500 |
| High temperature coatings | 420 |
| Impacted immersion coatings | 780 |
| Industrial maintenance coatings | 340 |
| Low solids coatings | 120 |
| Magnesite cement coatings | 450 |
| Mastic texture coatings | 300 |
| Metallic pigmented coatings | 500 |
| Multi-color coatings | 250 |
| Nuclear coatings | 450 |
| Pre-treatment wash primers | 420 |
| Primers, sealers, and undercoaters | 200 |
| Quick-dry enamels | 250 |
| Quick-dry primers, sealers and undercoaters | 200 |
| Recycled coatings | 250 |
| Roof coatings | 250 |

| Coating Category | VOC content limit (grams per liter)' |
|--|---|
| Rust preventive coatings | 400 |
| Shellacs: | |
| * Clear | 730 |
| * Opaque | 550 |
| Specialty primers, sealers, and undercoaters | 350 |
| Stains | 250 |
| Swimming pool coatings and swimming pool repair and maintenance coatings | 340 |
| Temperature-indicator safety coatings | 550 |
| Thermoplastic rubber coatings and mastics | 550 |
| Traffic marking coatings | 150 |
| Waterproofing sealers | 250 |
| Waterproofing concrete/masonry sealers | 400 |
| Wood preservatives | 350 |

Limits are expressed in grams of VOC per liter of coating thinned to the manufacturer's maximum recommendation, excluding the volume of any water, exempt compounds, or colorant added to tint basis. Manufacturer's maximum recommendation means the maximum recommendation for thinning that is indicated on the label or lid of the coating container.

If anywhere on the container of any architectural coating, or any label sticker affixed to the container, or in any sales, advertising, or technical literature supplied by a manufacturer or anyone acting on the manufacturer's behalf, including retailers who sell under a private label, representation is made that the coating meets the definition of or is recommended for use or may be used for more than one of the coating categories listed in subdivision (a) of this section, then the most restrictive VOC content limit shall apply. This provision does not apply to the coating categories listed below in paragraphs (1)-(19) of this subdivision:

- (1) lacquer coatings (including lacquer sanding sealers)
- (2) metallic pigmented coatings
- (3) shellacs
- (4) fire-retardant coatings
- (5) pretreatment wash primers
- (6) industrial maintenance coatings
- (7) low-solids coatings
- (8) wood preservatives
- (9) high temperature coatings
- (10) temperature-indicator safety coatings
- (11) antenna coatings
- (12) antifouling coatings
- (13) flow coatings
- (14) bituminous roof primers
- (15) thermoplastic rubber coatings and mastics
- (16) specialty primers, sealers, and undercoaters
- (17) calcimine recoaters
- (18) impacted immersion coatings
- (19) nuclear coatings.

For any coating that does not meet any of the definitions for the specialty coatings categories listed in subdivision (a) of this section, the VOC content limit shall be determined by classifying the coating as a flat coating, nonflat coating, or nonflat-high gloss coating as those terms are defined in sections 205.2(x), (am) and (an) of this Part and the corresponding flat or nonflat coating limit shall apply.

Appendix 1-20

Gas Cap Integrity Test

(Source: 6 NYCRR 217-1.3, Table 2.) [Added March 2003]

| <u>Model Year</u> | <u>Initial System Pressure</u> | <u>Standard</u> |
|-------------------|--------------------------------|--|
| 1968 and later | 30 ±1 inches of water | Leak rate of less than or equal to 60 cc/min |

Appendix 1-21

Pollutants Regulation Under Section 112(r) of the Act (6 NYCRR 200.1(bk)) [Added January 2002; Citation Revised March 2006]

The list of pollutants regulated under section 112(r) of the Act as of the effective date of this part:

| CAS Number | Chemical Name |
|-------------|---|
| 000075-07-0 | Acetaldehyde |
| 000074-86-2 | Acetylene [Ethyne] |
| 000107-02-8 | Arolein [2-Propenal] |
| 000107-13-1 | Acrylonitrile [2-Propenenitrile] |
| 000814-68-6 | Acrylyl chloride [2-Propenoyl chloride] |
| 000107-18-6 | Allyl alcohol [2-Propen-1-ol] |
| 000107-11-9 | Allylamine [2-Propen-1-amine] |
| 007664-41-7 | Ammonia (anhydrous) |
| 007664-41-7 | Ammonia (conc 20 percent or greater) |
| 007784-34-1 | Arsenous trichloride |
| 007784-42-1 | Arsine |
| 010294-34-5 | Boron trichloride [Borane, trichloro-] |
| 007637-07-2 | Boron trifluoride [Borane, trifluoro-] |
| 000353-42-4 | Boron trifluoride compound with methyl ether (1:1) |
| 007726-95-6 | Bromine |
| 000598-73-2 | Bromotrifluorethylene [Ethene, bromotrifluoro-] |
| 000106-99-0 | 1,3-Butadiene |
| 000106-97-8 | Butane |
| 025167-67-3 | Butene |
| 000106-98-9 | 1-Butene |
| 000107-01-7 | 2-Butene |
| 000590-18-1 | 2-Butene-cis |
| 000624-64-6 | 2-Butene-trans [2-Butene, (E)] |
| 000075-15-0 | Carbon disulfide |
| 000463-58-1 | Carbon oxysulfide [Carbon oxide sulfide (COS)] |
| 007782-50-5 | Chlorine |
| 010049-04-4 | Chlorine dioxide [Chlorine oxide (ClO ₂)] |
| 007791-21-1 | Chlorine monoxide [Chlorine oxide] |
| 000067-66-3 | Chloroform [Methane, trichloro-] |
| 000542-88-1 | Chloromethyl ether [Methane, oxybis chloro-] |
| 000107-30-2 | Chloromethyl methyl ether [Methane, chloromethoxy-] |
| 000590-21-6 | 1-Chloropropylene [1-Propene, 1-chloro-] |
| 000557-98-2 | 2-Chloropropylene [1-Propene, 2-chloro-] |
| 004170-30-3 | Crotonaldehyde [2-Butenal] |
| 000123-73-9 | Crotonaldehyde, (E)- [2-Butenal, (E)-] |
| 000460-19-5 | Cyanogen [Ethanedinitrile] |
| 000506-77-4 | Cyanogen chloride |
| 000108-91-8 | Cyclohexylamine [Cyclohexanamine] |
| 000075-19-4 | Cyclopropane |
| 019287-45-7 | Diborane |
| 004109-96-0 | Dichlorosilane [Silane, dichloro-] |
| 000075-37-6 | Difluoroethane [Ethane, 1,1-difluoro-] |
| 000124-40-3 | Dimethylamine [Methanamine, N-methyl-] |
| 000075-78-5 | Dimethyldichlorosilane [Silane, dichlorodimethyl-] |
| 000057-14-7 | 1,1-Dimethylhydrazine [Hydrazine, 1,1-dimethyl-] |

| CAS Number | Chemical Name |
|-------------|--|
| 000463-82-1 | 2,2-Dimethylpropane [Propane, 2,2-dimethyl] |
| 000106-89-8 | Epichlorohydrin [Oxirane, (chloromethyl)-] |
| 000074-84-0 | Ethane |
| 000107-00-6 | Ethyl acetylene [1-Butyne] |
| 000075-04-7 | Ethylamine [Ethanamine] |
| 000075-00-3 | Ethyl chloride [Ethane, chloro-] |
| 000074-85-1 | Ethylene [Ethene] |
| 000107-15-3 | Ethylenediamine [1,2-Ethanediamine] |
| 000151-56-4 | Ethyleneimine [Aziridine] |
| 000075-21-8 | Ethylene oxide [Oxirane] |
| 000060-29-7 | Ethyl ether [Ethane, 1,1 -oxybis-] |
| 000075-08-1 | Ethyl mercaptan [Ethanethiol] |
| 000109-95-5 | Ethyl nitrite [Nitrous acid, ethyl ester] |
| 007782-41-4 | Fluorine |
| 000050-00-0 | Formaldehyde (solution) |
| 000110-00-9 | Furan |
| 000302-01-2 | Hydrazine |
| 007647-01-0 | Hydrochloric acid (conc 37 percent or greater) |
| 000074-90-8 | Hydrocyanic acid |
| 001333-74-0 | Hydrogen |
| 007647-01-0 | Hydrogen chloride (anhydrous) [Hydrochloric acid] |
| 007664-39-3 | Hydrogen fluoride/Hydrofluoric acid (conc 50 percent or greater) [Hydrofluoric acid] |
| 007783-07-5 | Hydrogen selenide |
| 007783-06-4 | Hydrogen sulfide |
| 013463-40-6 | Iron, pentacarbonyl- [Iron carbonyl (Fe(CO) ₅), (TB-5-1 1)-] |
| 000075-28-5 | Isobutane [Propane, 2-methyl] |
| 000078-82-0 | Isobutyronitrile [Propanenitrile, 2-methyl-] |
| 000078-78-4 | Isopentane [Butane, 2-methyl-] |
| 000078-79-5 | Isoprene [1,3 -Butadiene, 2-methyl-] |
| 000075-31-0 | Isopropylamine [2-Propanamine] |
| 000108-23-6 | Isopropyl chloroformate [Carbonochloridic acid, 1-methylethyl ester] |
| 000075-29-6 | Isopropyl chloride [Propane, 2-chloro-] |
| 000126-98-7 | Methacrylonitrile [2-Propenenitrile, 2-methyl-] |
| 000074-82-8 | Methane |
| 000074-89-5 | Methylamine [Methanamine] |
| 000563-46-2 | 2-Methyl-1-butene |
| 000563-45-1 | 3-Methyl-1-butene |
| 000074-87-3 | Methyl chloride [Methane, chloro-] |
| 000079-22-1 | Methyl chloroformate [Carbonochloridic acid, methyl ester] |
| 000115-10-6 | Methyl ether [Methane, oxybis-] |
| 000107-31-3 | Methyl formate [Formic acid, methyl ester] |
| 000060-34-4 | Methyl hydrazine [Hydrazine, methyl-] |
| 000624-83-9 | Methyl isocyanate [Methane, isocyanato-] |
| 000115-11-7 | 2-Methylpropene [1-Propene, 2-methyl-] |
| 000556-64-9 | Methyl thiocyanate [Thiocyanic acid, methyl ester] |
| 000075-79-6 | Methyltrichlorosilane [Silane, trichloromethyl-] |
| 013463-39-3 | Nickel carbonyl |
| 007697-37-2 | Nitric acid (conc 80 percent or greater) |
| 010102-43-9 | Nitric oxide [Nitrogen oxide (NO)] |
| 008014-95-7 | Oleum (Fuming Sulfuric acid) [Sulfuric acid mixture with sulfur trioxide] |

| CAS Number | Chemical Name |
|-------------|--|
| 000504-60-9 | 1,3-Pentadinene |
| 000109-66-0 | Pentane |
| 000109-67-1 | 1-Pentene |
| 000646-04-8 | 2-Pentene, (E)- |
| 000627-20-3 | 2-Pentene, (Z)- |
| 000079-21-0 | Peracetic acid [Ethaneperoxoic acid] |
| 000594-42-3 | Perchloromethylmercaptan [Methanesulphenyl chloride, trichloro-] |
| 000075-44-5 | Phosgene [Carbonic dichloride] |
| 007803-51-2 | Phosphine |
| 010025-87-3 | Phosphorus oxychloride [Phosphoryl chloride] |
| 007719-12-2 | Phosphorus trichloride [Phosphorous trichloride] |
| 000110-89-4 | Piperidine |
| 000463-49-0 | Propadiene [1,2-Propadiene] |
| 000074-98-6 | Propane |
| 000107-12-0 | Propionitrile [Propanenitrile] |
| 000109-61-5 | Propyl chloroformate [Carbonochloridic acid, propylester] |
| 000115-07-1 | Propylene [1-Propene] |
| 000075-55-8 | Propyleneimine [Aziridine, 2-methyl-] |
| 000075-56-9 | Propylene oxide [Oxirane, methyl-] |
| 000074-99-7 | Propyne [1-Propyne] |
| 007803-62-5 | Silane |
| 007446-09-5 | Sulfur dioxide (anhydrous) |
| 007783-60-0 | Sulfur tetrafluoride [Sulfur fluoride (SF4), (T-4)-] |
| 007446-11-9 | Sulfur trioxide |
| 000116-14-3 | Tetrafluoroethylene [Ethene, tetrafluoro-] |
| 000075-74-1 | Tetramethyllead [Plumbane, tetramethyl-] |
| 000075-76-3 | Tetramethylsilane [Silane, tetramethyl-] |
| 000509-14-8 | Tetranitromethane [Methane, tetranitro-] |
| 007550-45-0 | Titanium tetrachloride [Titanium chloride (TiCl4) (T-4)-] |
| 000584-84-9 | Toluene 2,4-diisocyanate [Benzene, 2,4-diisocyanato-1-methyl-] |
| 000091-08-7 | Toluene 2,6-diisocyanate [Benzene, 1,3-diisocyanato-2-methyl-] |
| 026471-62-5 | Toluene diisocyanate (unspecified isomer) [Benzene, 1,3-diisocyanatomethyl-] |
| 010025-78-2 | Trichlorosilane [Silane, trichloro-] |
| 000079-38-9 | Trifluorochloroethylene [Ethene, chlorotrofluoro-] |
| 000075-50-3 | Trimethylamine [Methanamine, N,N-dimethyl-] |
| 000075-77-4 | Trimethylchlorosilane [Silane, chlorotrimethyl-] |
| 000108-05-4 | Vinyl acetate monomer [Acetic acid ethenyl ester] |
| 000689-97-4 | Vinyl acetylene [1-Buten-3-yne] |
| 000075-01-4 | Vinyl chloride [Ethene, chloro-] |
| 000109-92-2 | Vinyl ethyl ether [Ethene, ethoxy-] |
| 000075-02-5 | Vinyl fluoride [Ethene, fluoro-] |
| 000075-35-4 | Vinylidene chloride [Ethene, 1, 1-dichloro-] |
| 000075-38-7 | Vinylidene fluoride [Ethene, 1, 1-difluoro-] |
| 000107-25-5 | Vinyl methyl ether [Ethene, methoxy-] |

SECTION 2

CULTURAL RESOURCES MANAGEMENT

New York Supplement, March 2010

This section covers state requirements for the management of cultural and historic resources and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

New York has no separate, relevant requirements regarding cultural and historic resources management.

SECTION 3

HAZARDOUS MATERIALS MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Hazardous Materials Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Aboveground Storage Tank* - any stationary tank with a capacity of 185 gal or more which is not entirely covered with earth or other backfill material, or any stationary tank with a capacity of 180 gal or more which can be inspected in a subterranean vault (Codes, Rules, and Regulations of the State of New York, Title 6, Chapter V, Subchapter D, Part 596, Section 596.1 (6 NYCRR 596.1)).
- *Ancillary Equipment* - any device including, but not limited to, piping, fittings, fixtures, gauges, alarms, rupture disks, pressure release valves, flanges, valves, and pumps that are used to distribute, meter, or control the flow of hazardous substances to or from a storage tank (6 NYCRR 595.1).
- *Capacity* - the total volume of the tank measured in U.S. gallons, unless otherwise specified (6 NYCRR 596.1).
- *Continuous* - when referring to a release, a release which occurs without interruption or abatement or that is routine, anticipated, and intermittent and incidental to normal operations (6 NYCRR 595.1).
- *Department* - the New York State Department of Environmental Conservation (6 NYCRR 595.1).
- *Environment* - any water, water vapor, land including land surface or subsurface, air, fish, wildlife, biota, and all other natural resources (6 NYCRR 596.1).
- *Hazardous Substance* - any substance listed as a hazardous substance in Part 597 (see Appendix 3-1) or a mixture thereof. Petroleum (see definition) and hazardous wastes as identified or listed in Part 371 of this Title are not hazardous substances for the purposes of this Part (6 NYCRR 595.1 and 596.1) [Revised March 2010].
- *Mixture* - a heterogeneous association of substances where the various individual substances retain their essential original properties. The term "mixture" includes solutions (but does not include alloys or amalgams) where one or more active ingredients are hazardous substances. Mixtures regulated under 6 NYCRR 595 are mixtures which contain a hazardous substance, or combination thereof, in quantities of 1 percent or more by volume or weight (6 NYCRR 595.1).
- *Nonstationary Tank* - any tank, barrel, drum, or other holding vessel which is mobile in design or practice and which is used to store 1000 kg (2200 lb) or more of a hazardous substance, or mixture thereof, for a period of 90 consecutive days or more. This includes tanks on wheels, trolleys, skids, pallets, and rollers (6 NYCRR 596.1).
- *Overfill* - a release or spill that occurs when a storage tank is filled beyond its capacity (6 NYCRR 595.1).
- *Permanently Closed* - an out-of-service storage tank which has been emptied of all product and residual materials, cleaned, rendered free of any hazardous or flammable vapors, disconnected from any process or dispensing units and closed or converted to another purpose consistent with Department standards for closure (6 NYCRR 596.1) [Citation Revised March 2010].

- *Petroleum* - oil or petroleum of any kind and in any form including, but not limited to, oil, petroleum fuel oil, oil sludge, oil refuse, oil mixed with other waste, crude oil, gasoline and kerosene (6 NYCRR 597.1).
- *Piping or Piping System* - a fixed or permanent pipe including attached equipment and components used to convey, distribute, mix, separate, discharge, meter, control, or stop the flow of a hazardous substance to or from a storage tank (6 NYCRR 596.1).
- *Release* - any unauthorized pumping, pouring, emitting, emptying, overfilling, spilling, leaking, leaching, or disposing, directly or indirectly, of a hazardous substance or any other substance which results in the formation of a hazardous substance upon release so that the substance, or any related constituent thereof, or any degradation product of such a substance or of a related constituent thereof, may enter the environment (6 NYCRR 595.1).
- *Repair* - the work necessary to restore a storage tank or component to a safe and satisfactory operating condition provided that in all cases the storage tank or component design must continue to comply with the requirements herein, that special service requirements do not restrict such work, and the basic design concept is not altered (6 NYCRR 596.1).
- *Reportable Quantity* - the amount of a hazardous substance that must be reported to the Department in the event of a release, spill, or overflow. The reportable quantity for mixtures is the amount of the hazardous substance components of a mixture. Reportable quantities are listed in 6 NYCRR 597.2 or 40 CFR 302 (see Appendix 3-1 of this manual, and Appendix 3-1 of the TEAM Guide) (6 NYCRR 595.1).
- *Secondary Containment* -
 1. containment which prevents any material released from reaching the land or water outside the containment area before clean-up occurs (6 NYCRR 595.1)
 2. a dike, remote impoundment, or any other containment area which protects a tank, pipe, or transfer station from damage due to vehicle traffic, fire exposure, spills from nearby tanks and which prevents any material spilled or released from reaching the land or water outside the containment area before clean-up occurs (6 NYCRR 596.1).
- *Spill or Spillage* - any escape of a substance from the containers employed in the normal course of storage, transfer, processing, or use (6 NYCRR 595.1).
- *Stable in Quantity and Rate* - a release which is predictable and regular in the amount and rate of emission (6 NYCRR 595.1).
- *Stationary Tank* - any underground tank or any aboveground tank which is stationary in either practice or design. Examples of stationary aboveground tanks include tanks which may rest on the ground or may be in permanent operation or fixed permanently in place on foundations, racks, cradles, or stilts. A stationary tank includes any aboveground container, barrel tank car, drum, or other holding vessel with a capacity of 185 gal or more that is connected to piping for a period of 90 days or more (6 NYCRR 596.1).
- *Storage Tank System or Storage Tank* - an aboveground tank, an underground tank, or a nonstationary tank, and any associated piping, lines, dikes, curbs, transfer stations, and ancillary equipment (6 NYCRR 595.1).
- *Substantially Modified* - an existing storage facility that has been modified in one or more of the following ways:
 1. a new stationary tank added to the site
 2. an existing stationary tank is replaced, reconditioned or permanently closed
 3. a leaking tank is replaced, repaired or permanently closed (6 NYCRR 595.1).
 (NOTE: The repair, replacement, or installation of the piping system or ancillary equipment is not considered a substantial modification unless due to a reportable release.)

- *Tank* - a container or other holding vessel designed to store a hazardous substance which is constructed of nonearthen materials (e.g., concrete, steel, plastic) which provide structural support (6 NYCRR 595.1).
- *Underground Tank* - any tank completely covered with earth or other material. Tanks in subterranean vaults accessible for visual inspection are considered aboveground tanks (6 NYCRR 595.1).
- *Waters or Waters of the State* - include lakes, bays, sounds, ponds, impounding reservoirs, springs, wells, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic Ocean within the territorial limits of the State of New York, and all other bodies of surface or underground waters, natural or artificial inland or coastal, fresh or salt, public or private (except those private waters which do not combine or effect a junction with natural surface or underground waters), which are wholly or partially within or bordering the state or within its jurisdiction (6 NYCRR 596.1).

Hazardous Substance List

(Source: 6 NYCRR 597.2)

[Revised March 2007]

6 NYCRR 371 for the identification and listing of hazardous wastes included in the definition of hazardous substances.

Except for petroleum, this table is a list of all other hazardous substances in alphabetical order. Substances noted with an “A” are acutely hazardous substances.

Notification of the release of an RQ (Reportable Quantity) of solid particles of antimony, arsenic, beryllium, cadmium, chromium, copper, lead, nickel selenium, silver, thallium, or zinc is not required if the mean diameter of the particles released is larger than 100 micrometers (0.004 in.).

| CAS # | Substance | Reportable Quantity | | |
|-----------|--|---------------------|-------|---|
| | | Air | Water | |
| 83-32-9 | Acenaphthene | 1 | 1 | |
| 208-96-8 | Acenaphthylene | 1 | 1 | |
| 75-07-0 | Acetaldehyde | 1000 | 1 | |
| 75-87-6 | Acetaldehyde, trichloro- | 5000 | 1 | |
| 60-35-5 | Acetamide | 1 | 1 | |
| 93-71-0 | Acetamide, 2-chloro-n,n-diallyl- | 1 | 1 | |
| 640-19-7 | Acetamide, 2-fluoro- | 100 | 1 | A |
| 591-08-2 | Acetamide, n-(aminothioxomethyl) | 1000 | 1 | |
| 62-44-2 | Acetamide, n-(4-ethoxyphenyl) | 100 | 1 | |
| 53-96-3 | Acetamide, n-9h-fluoren-2-yl- | 1 | 1 | |
| 62-55-5 | Acetamide, thio- | 10 | 1 | |
| 64-19-7 | Acetic acid | 5000 | 100 | |
| 93-79-8 | Acetic acid, (2,4,5-trichlorophenoxy)-, butyl ester | 1000 | 100 | |

Footnotes

[TFN1] Notification of the release of an RQ (Reportable Quantity) of solid particles of antimony, arsenic, beryllium, cadmium, chromium, copper, lead, nickel, selenium, silver, thallium or zinc is not required if the mean diameter of the particles released is larger than 100 micrometers (0.004 inches).

[TFN2] Substances noted "A" are acutely hazardous substances.

SECTION 4

HAZARDOUS WASTE MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Hazardous Waste Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Approved Program or Approved State* - a state which has been approved or authorized by the U.S. Environmental Protection Agency (USEPA) under 40 CFR part 271 (see section 370.1(e) of this part) (6 New York Codes of Rules and Regulations (6 NYCRR) 370.2).
- *Aquifer* - a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of groundwater to wells or springs (6 NYCRR 370.2).
- *Authorized Representative* - the person responsible for the overall operation of a facility or an operational unit (i.e., part of a facility), such as the plant manager, superintendent or person of equivalent responsibility (6 NYCRR 370.2).
- *Authorized Treatment, Storage, or Disposal Facility or Authorized Facility* - with respect to a particular hazardous waste means a treatment, storage or disposal facility which is authorized, under the laws and regulations of both the Federal Government and the state in which it is located, to accept the hazardous waste for treatment, storage or disposal (6 NYCRR 370.2).
- *Commissioner* - the Commissioner of the New York State Department of Environmental Conservation or the Commissioner's designee (6 NYCRR 370.2).
- *Designated Treatment, Storage, or Disposal Facility or Designated Facility* - a hazardous waste treatment, storage or disposal facility which:
 1. has received an USEPA or Part 373 permit (or interim status) from an approved state
 2. is a facility which beneficially uses or reuses, or legitimately recycles or reclaims hazardous waste, or treats hazardous waste prior to beneficial use or reuse, or legitimate recycling or reclamation
 3. has been designated on the manifest by the generator pursuant to section 372.2(b) of this title. If a waste is destined to a facility in an authorized state which has not yet obtained authorization to regulate that particular waste as hazardous, then the designated facility must be a facility allowed by the receiving state to accept such waste (6 NYCRR 370.2).
- *Director* - the Director of the Division of Hazardous Substances Regulation of the New York State Department of Environmental Conservation or the Director's designee (6 NYCRR 370.2).
- *Disposal* - the abandonment, discharge, deposit, injection, dumping, spilling, leaking or placing of any solid waste, including hazardous waste, into or onto any lands or waters, of the state, so that such waste or hazardous waste or any related constituent thereof may enter the environment, or be emitted to the air, or discharged to any waters, including groundwaters thereof. Disposal also means the thermal destruction of wastes or hazardous waste and the burning of such wastes as fuel for the purpose of recovering usable energy (6 NYCRR 370.2).
- *Disposal Facility* - a facility or part of the facility at which solid waste, including hazardous waste, is intentionally placed into or on any air, land or water, and at which waste will remain after closure. The term

disposal facility does not include a correction action management unit into which remediation wastes are placed (6 NYCRR 370.2).

- *Disposer State* - the state in which the designed treatment, storage, or disposal facility is located (6 NYCRR 370.2).
- *Division* - the Division of Solid and Hazardous Waste of the New York State Department of Environmental Conservation (6 NYCRR 370.2).
- *Environmental Media* - naturally occurring, nonliving substances, including soil, sediment, rock, groundwater, surface water, surface runoff, air, and only such animal and vegetable matters as may be incidentally contained therein (e.g., soil and water bacteria, underground roots, skeletal remains, etc.) (6 NYCRR 371.4(e)).
- *Facility* -
 1. All contiguous land, and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage or disposal operational units (e.g., one or more landfills, surface impoundments, or combinations of them).
 2. For the purpose of implementing corrective action under section 373-2.6(l) of this title, all contiguous property under the control of the owner or operator seeking a permit under subtitle C of RCRA or article 27, Title 9 of the ECL. This definition also applies to facilities implementing corrective action under Subpart 373-2 of this title or RCRA section 3008(h)
 3. Notwithstanding subparagraph (2) of this definition, a remediation waste management site is not a facility that is subject to subdivision 373-2.6(l), Corrective Action for Solid Waste Management Units, of this Title, but is subject to corrective action requirements if the site is located within such a facility. (6 NYCRR 370.2) [Revised March 2003].
- *Federal Agency* - any department, agency, or other instrumentality of the Federal government, and any government corporation and the Government Printing Office (6 NYCRR 370.2) [Revised March 2003].
- *Federal, State, and Local Approvals or Permits Necessary to Begin Physical Construction* - permits and approvals required under Federal, state or local hazardous waste control statutes, regulations or ordinances (6 NYCRR 370.2).
- *Hazardous Waste Management* - the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste (6 NYCRR 370.2).
- *Hazardous Waste Management Facility (HWM Facility)* - all contiguous land, and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (6 NYCRR 370.2).
- *Hazardous Waste Management Unit* - a contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area. Examples of hazardous waste management units include a surface impoundment, a waste pile, a land treatment area, a landfill cell, an incinerator, a tank and its associated piping and underlying containment system, and a container storage area. A container alone does not constitute a unit; the unit includes containers and the land or pad upon which they are placed (6 NYCRR 370.2).
- *Households* - include, but are not limited to, single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, camp grounds, picnic grounds, and day use recreation areas (see Household hazardous waste) (6 NYCRR 370.2)
- *Household Hazardous Waste* - household waste that, but for its point of origin, would be a hazardous waste under Part 371 of this title and includes all pesticides as defined in ECL article 33, that originate from a household (6 NYCRR 370.2).

- *Household Hazardous Waste Collection Facility* - any facility or site authorized, under Subpart 373-4 of this title, to accept household hazardous waste, or waste from conditionally exempt small quantity generators or eligible farmers on a temporary, periodic, or permanent basis (6 NYCRR 370.2).
- *Manifest* - a Uniform Hazardous Waste Manifest and Instructions as found in Appendix 30, infra, a shipping document USEPA form 8700-22, or any other shipping document having been approved by the commissioner and administrator (6 NYCRR 370.2).
- *Operator* - the person who is responsible for the overall operation of a hazardous waste management facility (6 NYCRR 370.2).
- *Owner* - the person who owns any facility or part of a facility subject to regulation under Parts 370 through 374, and 376 of this title (6 NYCRR 370.2).
- *Owner or Operator* - the owner or operator of any facility or activity subject to regulation under Parts 370 through 374, and 376 of this title (6 NYCRR 370.2).
- *PCB Article* - any manufactured article, other than a PCB container, that contains PCBs and whose surface(s) has been in direct contact with PCBs. PCB article includes capacitors, transformers, electric motors, circuit breakers, reclosers, voltage regulators, switches (including sectionalizers and motor starters), electromagnets, cable, hydraulic machines, pumps, pipes, and any other manufactured item which is formed to a specific shape or design during manufacture, has end use function(s) dependent in whole or in part upon its shape or design during end use, and has either no change of chemical composition during its end use or only those changes of composition which have no commercial purpose separate from that of the PCB Article (6 NYCRR 371.4(e)).
- *Permit* - an authorization, license, or equivalent control document issued by New York State Department of Environmental Conservation to implement the requirements of Part 373 of this title. Permit does not include interim status (section 373-1.3), or any permit which has not yet been the subject of final agency action, such as a draft permit or a proposed permit (6 NYCRR 370.2).
- *Person* - an individual, trust, firm, joint- stock company, corporation (including a government corporation), partnership, association, state, Federal government and any agency thereof, municipality, commission, political subdivision of a state, or any interstate body (6 NYCRR 370.2).
- *Personnel or Facility Personnel* - all persons who work at or oversee the operations of a hazardous waste facility, and whose actions or failure to act may result in noncompliance with the requirements of Part 373 of this title (6 NYCRR 370.2).
- *Regional Administrator* - the regional administrator of the appropriate regional office of the Environmental Protection Agency or the Regional Administrator's designee (6 NYCRR 370.2).
- *Regional Permit Administrator* - an employee of the department located in each of the nine regional offices of the department and designated by the commissioner to act on the commissioner's behalf in carrying out Part 621 of this title. Regional permit administrators' addresses and the counties under their jurisdiction can be found in Appendix 1 of this title (6 NYCRR 370.2).
- *Remediation Waste* - all solid and hazardous waste, and all media (including groundwater, surface water, soils, and sediments) and debris, which contain listed hazardous wastes or which themselves exhibit a hazardous waste characteristic, that are managed for the purpose of implementing corrective action under section 373-2.6(l) of this title and RCRA section 3008(h) and ECL 71-2727(3). For a given facility, remediation wastes may originate only from within the facility boundary, but may include waste managed in implementing section 373-2.6 of this title or ECL 27-0911, 71-2727(3) or RCRA section 3008(h) for releases beyond the facility boundary (6 NYCRR 370.2).

- *Small Capacitor* - a capacitor which contains less than 1.36 kg (3 lb) of dielectric fluid. The following assumptions may be used if the actual weight of the dielectric fluid is unknown. A capacitor whose total volume is less than 1639 m³ (100 in.³) may be considered to contain less than 1.36 kg (3 lb) of dielectric fluid and a capacitor whose total volume is more than 3278 m³ (200 in.³) must be considered to contain more than 1.36 kg (3 lb) of dielectric fluid. A capacitor whose volume is between 1639 and 3278 m³ may be considered to contain less than 1.36 kg (3 lb) of dielectric fluid if the total weight of the capacitor is less than 4.08 kg (9 lb) (6 NYCRR 371.4(e)).

- *Sole Source Aquifer* - an aquifer system that the USEPA, pursuant to the Safe Drinking Water Act, 42 USC 300h-3(e), (see section 370.1(e) of this part), has determined to be the sole or principal drinking water source for an area and which, if contaminated, would create a significant hazard to public health. The following have been designated sole source aquifers:
 1. The Clinton Street-Ballpark Valley Aquifer System includes the entire municipalities of Vestal, Johnson City, Endicott, Nichols, Waverly, and Owego, New York. Its recharge zone is considered to be one and the same with this area. The streamflow source zone is that portion of the Susquehanna River drainage basin composing the upstream headwaters area for the Broome and Tioga County area.
 2. The Long Island Aquifer System includes the entire counties of Kings, Queens, Nassau, and Suffolk, New York.
 3. The Schenectady/Niskayuna Aquifer System includes the entire municipalities of Ballston, Burnt Hills, Charlton, Glenville, Niskayuna, Rexford, Rotterdam, Schenectady, and Scotia, New York (6 NYCRR 370.2).

- *Vehicle* - any device or contrivance which is required by law to be registered with a state, province or the Federal government for conveyance over public roads and which actually contains or carries a regulated waste, for example, in the case of a tractor-trailer combination, the roll-off container or other removable containment device, it is the mobile flatbed or the undercarriage that is considered to be the vehicle (6 NYCRR 364.1).

**HAZARDOUS WASTE MANAGEMENT
GUIDANCE FOR NEW YORK CHECKLIST USERS**

REFER TO CHECKLIST ITEMS:

This list of checklist items represents the requirements for hazardous waste management in New York that are substantially different than the hazardous waste requirements in the U. S. TEAM Guide.

| | |
|---|-----------------------------------|
| Missing Checklist Items | HW.2.1.NY. |
| State-Specific Hazardous Waste Requirements | |
| General | [Moved] |
| Hazardous Waste Turn-in/Collection Point | HW.7.1.NY. through HW.7.17.NY. |
| All Sizes of Generators | HW.10.1.NY. |
| Small Quantity Generators (SQG) | HW.40.1.NY. |
| Generators | HW.55.1.NY. through HW.55.5.NY. |
| Transportation of Hazardous Waste | HW.100.1.NY. through HW.100.4.NY. |
| All TSDFs | |
| General | HW.105.1.NY. |
| Documentation Requirements | HW.145.1.NY. through HW.145.5.NY. |
| Universal Waste | |

New York includes batteries, pesticides, thermostats, and lamps under Universal Waste regulations. See HW.7.3.NY. for state requirements covering fluorescent lighting lamps.

Appendix 4-1

PCB Hazardous Waste Numbers

(Source: 6 NYCRR 371.4(e))

Wastes containing polychlorinated biphenyls (PCBs):

1. All solid wastes containing 50 ppm by weight (on a dry weight basis for other than liquid wastes) or greater of polychlorinated biphenyls (PCBs) are listed hazardous wastes, excluding small capacitors as defined in paragraph (3) of this subdivision and PCB Articles drained in accordance with subparagraphs (2)(ii) and (iii) of this subdivision. PCB Articles that contain less than 50 ppm PCBs are not regulated as hazardous waste. Oils in or from electrical equipment whose PCB concentration is unknown, except circuit breakers, reclosers, and cable, must be assumed to contain between 50 and 500 ppm PCB and are listed hazardous waste. "PCB" and "PCBs" mean any chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees. Any chemical waste, combination of waste, or environmental media that contains less than 50 ppm PCBs are listed hazardous waste only as specifically provided in paragraph (2) of this subdivision. Wastes that may contain PCBs include dielectric fluids, contaminated solvents, waste oil, heat transfer fluids, hydraulic fluids, dredge spoils, and material contaminated as a result of spills. The hazardous code for these PCB wastes shall be Toxic Waste (T). These wastes shall have Hazardous Waste Numbers assigned as follows:

- B001 PCB Oil (concentrated) from transformers, capacitors, etc.
- B002 Petroleum oil or other liquid containing 50ppm or greater of PCBs, but less than 500 ppm PCBs. This includes oil from electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers and cable.
- B003 Petroleum oil or other liquid containing 500 ppm or greater of PCBs.
- B004 PCB Articles containing 50 ppm or greater of PCBs, but less than 500 ppm PCBs, excluding small capacitors. This includes oil-filled electrical equipment whose PCB concentration is unknown, except for circuit breakers, reclosers, and cable.
- B005 PCB articles, other than transformers, that contain 500 ppm or greater of PCBs, excluding small capacitors.
- B006 PCB transformers. "PCB Transformers" means any transformer that contains 500 ppm PCB or greater.
- B007 Other PCB Wastes including contaminated soil, solids, sludges, clothing, rags, and dredge material.

(NOTE: PCBs are also regulated by 40 CFR Part 761. A person must comply with both this part and 40 CFR Part 761 (see section 370.1(e) of this title).

2. Drained PCB articles.

a. Except as provided in subparagraphs (ii) and (iii) of this paragraph, drained PCB Articles containing at least 50 ppm PCBs are regulated as hazardous waste. (ii) PCB articles, except capacitors, that contain between 50 and 500 ppm PCB, are no longer regulated as PCB listed hazardous waste provided that all free-flowing liquid has been drained from the article. The drained liquid is a listed hazardous waste, as is any solvent used for flushing (iii)([a]). Hydraulic machines containing less than 1,000 ppm PCB are no longer regulated as PCB listed hazardous waste, provided that all free-flowing liquid has been drained from the hydraulic machine. The drained liquid is a listed hazardous waste, as is any solvent used for flushing.

b. Hydraulic machines containing 1,000 ppm PCB or greater are no longer regulated as PCB listed hazardous waste, provided that all free-flowing liquid has been drained from the hydraulic machine, and the drained hydraulic machine is flushed with a solvent in which PCBs are readily soluble. The solvent to be used for flushing must contain less than 50 ppm PCB. The drained liquid and the solvent used for flushing are listed hazardous wastes.

SECTION 5

NATURAL RESOURCES MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Natural Resources Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Adjacent Area* - (6 NYCRR 661.4):
 1. any land immediately adjacent to a tidal wetland within whichever of the following limits is closest to the most landward tidal wetland boundary, as such most landward tidal wetlands boundary is shown on an inventory map:
 - a. 300 ft landward of said most landward boundary of a tidal wetland, provided, however, that within the boundaries of the City of New York this distance shall be 150 ft
 - b. to the seaward edge of the closest lawfully and presently existing (i.e., as of 20 August 1977), functional and substantial fabricated (including, but not limited to, paved streets and highways, railroads, bulkheads and sea walls, and rip-rap walls) which lies generally parallel to said most tidal wetland landward boundary and which is a minimum of 100 ft in length as measured generally parallel to such most landward boundary, but not including individual buildings
 - c. in the elevation contour of 10 ft above mean sea level, except when such contour crosses the seaward face of a bluff or cliff, or crosses a hill on which the slope equals or exceeds the natural angle of repose of the soil, then to the topographic crest of such bluff, cliff, or hill. Pending the determination by the Commissioner in a particular case, the most recent, as of 21 July 1992, topographical maps published by the United States Geological Survey, Department of the Interior, having a scale of 1:24,000 shall be rebuttable presumptive evidence of such 10 ft elevation.
 2. Adjacent area shall not include any area laying landward of an imaginary line drawn between the seaward edges of two existing (i.e., as of 20 August 1977) substantial fabricated structures which constitute the landward limit of an adjacent area where the area landward of such imaginary line does not have located thereon any such fabricated structures and where such imaginary line is less than 100 ft in length, as measured generally parallel to the most landward limit of the tidal wetland involved.
 3. Where land lies within the boundaries of an adjacent area but appears to be excluded from an adjacent area, such land shall be deemed to be part of an adjacent area. Provided, however, that in such instances of overlap between the various provisions the regional permit administrator may in his discretion determine that said land is not an adjacent area if factors are present which in his opinion justify treating such land as nonadjacent area.
- *Aquaculture* - the cultivation and harvesting of products that naturally are produced in the marine environment, including fish, shellfish, crustaceans, and seaweed, and the installation of cribs, racks, and in-water structures for cultivating such products, but shall not mean the construction of any building, any filling or dredging, or the construction of any water-regulating structures (6 NYCRR 661.4).
- *Banks* - that land area immediately adjacent to, and which slopes toward, the bed of a watercourse, and which is necessary to maintain the integrity of a watercourse. For purposes of this section, a bank will not be considered to extend more than 50 ft horizontally from the mean high water line; with the following exception: where a generally uniform slope of 45 degrees (100 percent) or greater adjoins the bed of the watercourse, the bank is extended to the crest of the slope or the first definable break in slope, either a natural or constructed (i.e., road or railroad grade) feature, lying generally parallel to the watercourse (6 NYCRR 608.1).
- *Bed* - the land area of a watercourse covered by water at mean high water (6 NYCRR 608.1).

- *Commissioner* - the Commissioner of Environmental Conservation or a duly authorized representative (6 NYCRR 364.1(c)).
- *Department* - the New York State Department of Environmental Conservation (6 NYCRR 364.1(c)).
- *Dredging* - the excavation or removal of sediment, soil, mud, sand, shells, gravel, or other aggregate from any tidal wetland or adjacent area for the direct or indirect purpose of establishing or increasing water depth, increasing the surface or cross-sectional area of a waterway, or obtaining such sediment, soil, mud, sand, gravel, shells, or other aggregate. Provided however, such term shall not include acquiring samples of sediment, soil, mud, sand, shells, gravel, or other aggregate; acquiring the natural products of tidal wetlands by recreational or commercial fishing, shellfishing, aquaculture, hunting, or trapping where otherwise legally permitted; or maintenance dredging (6 NYCRR 661.4).
- *Endangered Species* - those species of fish, shellfish, crustacea, and wildlife designated by the Department as seriously threatened with extinction (Consolidated Laws of New York, Annotated, Article 11, Title 5, Section 11-0535 (CLNYA 11-0535)). Those species of plants in danger of extinction throughout all or a significant portion of their ranges within the state and requiring remedial action to prevent such extinction (CLNYA 9-1503).
- *Exploitably Vulnerable Species* - those species of plant that are likely to become threatened in the near future throughout all or a significant portion of their ranges within the state if causal factors continue unchecked (CLNYA 9-1503).
- *Fill* - any solid or semisolid, organic or inorganic material including, but not limited to, earth, clay, silt, sand, gravel, stone, rock, shale, concrete, ashes, cinder, slag, metal, stumps, solid waste as defined in SOLID WASTE MANAGEMENT, or any other similar material, whether or not enclosed or contained by a structure (6 NYCRR 608.1).
- *Freshwater Wetlands* - lands and waters of the State which meet the definition provided in section 24-0107(1) of the *Freshwater Wetlands Act* (article 24 and title 23 of article 71 of the Environmental Conservation Law) and have an area of at least 12.4 acres (approximately 5 hectares) or, if smaller, have unusual local importance as determined by the Commissioner (6 NYCRR 663.2)
- *Indirect Placement of Fill* - positioning material landward and in close proximity to the mean high water elevation of a waterbody such that the material is introduced into the waterbody by natural erosive forces thereby creating a fill below the mean high water elevation (6 NYCRR 608.1).
- *Industrial Use* - any manufacturing, production, or assembly of goods or materials and any mineral extraction operation (6 NYCRR 661.4).
- *Inventory Map* - a final tidal wetlands boundary map established by the Commissioner depicting the boundary lines of tidal wetlands and filed in the office of the county clerk in the county in which such wetlands are located (6 NYCRR 661.4).
- *Maintenance Dredging* - excavation to restore the depth of underwater lands to elevations which are demonstrated to the reasonable satisfaction of the Department to have been lawfully in existence within 20 yr preceding the date of the application (6 NYCRR 661.4).
- *Mean Low Water* or *Mean High Water* - respectively, the approximate average low water level or high water level for a given body of water at a given location, that distinguishes between predominantly aquatic and predominantly terrestrial habitat as determined, in order of use, by the following (6 NYCRR 608.1):
 1. available hydrologic data, calculations, and other relevant information concerning water levels (e.g., discharge, storage, tidal, and other recurrent water elevation data); (mean high water elevations are established, using this method, for certain waterbodies as presented in 6 NYCRR 608.11)

2. vegetative characteristics (e.g., location, presence, absence, or destruction of terrestrial or aquatic vegetation)
 3. physical characteristics (e.g., clear natural line impressed on a bank, scouring, shelving, or the presence of sediments, litter, or debris)
 4. other appropriate means that consider the characteristics of the surrounding area.
- *Navigable Waters of the State* - all lakes, rivers, streams, and other bodies of water in the state that are navigable in fact or upon which vessels with a capacity of one or more persons can be operated notwithstanding interruptions to navigation by artificial structures, shallows, rapids, or other obstructions, or by seasonal variations in capacity to support navigation. It does not include waters that are surrounded by land held in single private ownership at every point in their total area (6 NYCRR 608.1).
 - *Permit* - that form of Departmental approval required for the carrying on of a regulated activity (6 NYCRR 661.4).
 - *Plants* - species of native shrubs, trees, herbs, ferns, fern-allies, and wild flowers (CLNYA 9-1503).
 - *Pollution* - the presence in the environment of conditions or contaminant in quantities or characteristics which are or may be injurious to human, plant, or marine life, wildlife, or other animal life, or to property, or which unreasonably interfere with the comfortable enjoyment of life and property throughout such tidal wetlands as may be affected thereby (6 NYCRR 661.4).
 - *Principal Building* - any one of the following: single-family dwelling; each two units of a multiple-family dwelling; any other type of building, including, but not limited to, any commercial or industrial use building or public or semipublic building, that exceeds 1000 ft² in area and each additional 1000 ft² of floor space of such a building in excess of 3000 ft². In addition, each commercial or industrial use building or public or semipublic building less than 1000 ft² in area shall count as 1/4 of a principal building (6 NYCRR 661.4).
 - *Project* - any action which may result in direct or indirect physical impact on a tidal wetland, including, but not limited to, any regulated activity (6 NYCRR 661.4).
 - *Protected Stream* - any stream or particular portion of a stream for which there has been adopted by the Department or any of its predecessors any of the following classifications or standards: AA, AA(t), A, A(t), B, B(t), or C(t). Streams designated (t)(trout) also include those more specifically designated (ts)(trout spawning) (6 NYCRR 608.1).
 - *Public or Semipublic Building* - any municipal building, library building, school or college building, hospital building, building used as a place of worship, museum building, research center building, rehabilitation center building, or any similar building (6 NYCRR 661.4).
 - *Rare Species* - those species of plants that have small populations within their ranges in the state (CLNYA 9-1503).
 - *Regulated Activity* - means (6 NYCRR 661.4):
 1. any form of draining, dredging, excavation, or removal, either directly or indirectly, of soil, mud, sand, shells, gravel, or other aggregate
 2. any form of dumping, filling, or depositing, either directly or indirectly, of any soil, stones, sand, gravel, mud, rubbish, or fill of any kind
 3. the erection of any structures or construction of any facilities or roads, the driving of any pilings or placing of any other obstructions, whether or not changing the ebb and flow of the tide
 4. any form of pollution
 5. any portion of a subdivision of land located in any tidal wetland or adjacent area
 6. any other new activity within a tidal wetland or on an adjacent area which directly or indirectly may substantially alter or impair the natural condition or function of any tidal wetland.

- *Single-Family Dwelling* - any detached building containing one dwelling unit, including any mobile home (6 NYCRR 661.4).
- *Single Private Ownership* - the ownership by a person, joint ownership by more than one person or a single nongovernmental entity such as an association, corporation, trust, or estate. It does not include ownership by any unit of government, including a village, town, county, city, or the state or the United States or any subdivision, department, agency, or authority thereof (6 NYCRR 608.1).
- *Stream* - a watercourse or portion thereof, including the bed and banks thereof. Small ponds or lakes with a surface area at mean low water level of 10 acres or less and located in the course of a stream shall be considered part of a stream. A stream does not include a pond or lake having a surface area of greater than 10 acres at mean low water level (6 NYCRR 608.1).
- *Threatened Species* - those species of fish and wildlife designated by the Department which are likely to become endangered species within the foreseeable future throughout all or a significant portion of their range (CLNYA 11-0535). Those species of plants likely to become endangered within the foreseeable future throughout all or a significant portion of their ranges within the state (CLNYA 9-1503).
- *Tidal Wetlands* - any lands delineated as tidal wetlands on an inventory map and shall comprise the following classifications as delineated on such map (6 NYCRR 661.4):
 1. coastal fresh marsh - the tidal wetland zone, designated FM on an inventory map, found primarily in the upper tidal limits of riverine systems where significant fresh water inflow dominates the tidal zone. Species normally associated with this zone include narrow leaved cattail, *Typha angustifolia*; the tall brackish water cordgrasses, *Spartina pectinate* and/or *S. cynosuroides*; and the more typically emergent fresh water species such as arrow arum, *Peltandra*; pickerel weed, *Pondederia*; and cutgrass, *Leersia*
 2. intertidal marsh - the vegetated tidal wetland zone, designated IM on an inventory map, lying generally between average high and low tidal elevation. The predominant vegetation in this zone is low marsh cordgrass, *Spartina alterniflora*
 3. coastal shoals, bars, and flats - the tidal wetland zone, designated SM on an inventory map, that meets all of the following conditions:
 - a. at high tide is covered by water
 - b. at low tide is exposed or is covered by water to a maximum depth of approximately 1 ft
 - c. is not vegetated by low marsh cordgrass, *Spartina alterniflora*, except as otherwise determined in a specific case
 4. littoral zone - the tidal wetlands zone, designated LZ on an inventory map, that includes all lands under tidal waters which are not included in any other category, except as otherwise determined in a specific case. Provided, there shall be no littoral zone under waters deeper than 6 ft at mean low water. Pending determination by the Commissioner in a particular case, the most recent, as of 21 July 1992, national ocean survey maps published by the National Ocean Survey, National Oceanic and Atmospheric Administration shall be rebuttable presumptive evidence of such 6 ft depth.
 5. high marsh or salt meadow - the normal uppermost tidal wetland zone, designated HM on an inventory map, usually dominated by salt meadow grass, *Spartina patens*; and spike grass, *Distichlis spicata*. This zone is periodically flooded by spring and storm tides and is often vegetated by low vigor, *Spartina alterniflora* and Seaside lavender, *Limonium carolinianum*. Upper limits of this zone often include black grass, *Juncus Gerardi*; chairmaker's rush, *Scirpus sp*; marsh elder, *Iva frutescens*; and groundsel bush, *Baccharis halimifolia*.
 6. formerly connected tidal wetlands - the tidal wetlands zone, designated FC on an inventory map, in which normal tidal flow is restricted by manmade causes. Typical tidal wetland plant species may exist in such areas although they may be infiltrated with common reed, *Phragmites sp*.
- *Watercourse* - that area of land within which or upon which the flow of water is ordinarily confined due to existing topography (6 NYCRR 608.2).

Appendix 5-1

Activities on Tidal Wetlands Not Requiring a Permit (Source: 6 NYCRR 661.5) [Citation Revised March 2008]

| Uses | Area Category* |
|--|------------------------|
| Continuance of lawfully existing uses (including, but not limited to residential, commercial, industrial, agricultural, recreational, and public uses) and the continuance of all activities normally and directly associated with any such use, where such continuance does not involve expansion or significant alteration of the existing used | FM, IM, HM, SM, LZ, AA |
| Boating, hiking, swimming, camping, picnicking, and other similar nonmotorized forms of outdoor activities | FM, IM, HM, SM, LZ, AA |
| Depositing or removing the natural products of a tidal wetland (or adjacent area) in the process of recreational or commercial fishing, shell-fishing, aquaculture, hunting or trapping, including the erection and maintenance of temporary hides or blinds | FM, IM, HM, SM, LZ, AA |
| Establish plantings | AA |
| Operation of motor vehicles, including, but no limited to, air boats and other all terrain vehicles, for other than educational or scientific purposes (provided this item does not include operation of aircraft or mechanically propelled vessel other than air boats | AA |
| Operation of aircraft or mechanical propelled vessels other than air boats | FM, IM, HM, SM, LZ, AA |
| Installing a floating dock(s) totaling less than 200 ft ² in area | SM, LZ, AA |
| Relocation and/or rearrangement of floating docks, open pile docks, and similar structures | SM, LZ, AA |
| Ordinary maintenance and repair (not involving expansion or substantial restoration, reconstruction, or modification) of existing functional structures, facilities, or improved areas, including, but not limited to, bridges, roads, highways, railroad beds, bulkheads, docks, beaches, piers, wharves, pilings, dolphins, buildings, landscaped or paved areas, lawns, and agricultural and mosquito control ditches | FM, IM, HM, SM, LZ, AA |
| Routine beach regrading and cleaning, both above and below mean high water mark | SM, LZ, AA |
| Substantial restoration, reconstruction, modification, or expansion of existing functional residential structures which are and will continue to be located 75 ft or more (or 30 ft or more in New York City) from the most landward edge of any tidal wetland | AA |
| Construction of accessory structures or facilities for existing residential structures where such accessory structures or facilities are and will continue to be in full compliance with the development restrictions of this part | AA |
| The use or application of any chemical, petrochemical, or other toxic material, including any pesticide, where otherwise authorized by law, or the storage of any such material for purposes other than wholesaling or distribution to persons other than the ultimate users of such materials | FM, IM, HM, SM, LZ, AA |

* FM = Coastal Fresh Marsh
 IM = Intertidal Marsh
 SM = Coastal Shoals, Bars, and Flats
 LZ = Littoral Zone
 HM = High Marsh or Salt Meadow
 AA = Adjacent Area

Appendix 5-3

Endangered, Threatened, Exploitable Vulnerable, and Rare Native Plants

(Source: 6 NYCRR 193.3 (b) through(e)) [Revised March 2008]

(b) The following are endangered native plants in danger of extirpation throughout all or a significant portion of their ranges within the State and requiring remedial action to prevent such extinction.

| Species | Common Name |
|---|-------------------------------|
| <i>Acalypha virginica</i> var. <i>virginica</i> | Virginia Three-seeded Mercury |
| <i>Adoxa moschatellina</i> | Moschatel |
| <i>Agalinis acuta</i> | Sandplain Gerardia |
| <i>Allium burdickii</i> | Wild Leek |
| <i>Amaranthus pumilus</i> | Seabeach Amaranth |
| <i>Amelanchier nantucketensis</i> | Nantucket Juneberry |
| <i>Ammophila champlainensis</i> | Champlain Beachgrass |
| <i>Amphicarpum purshii</i> | Peanut Grass |
| <i>Angelica lucida</i> | Angelica |
| <i>Anthoxanthum monticulum</i> ssp. <i>orthanthum</i> | Alpine Sweetgrass |
| <i>Aplectrum hyemale</i> | Puttyroot |
| <i>Arabis drummondii</i> | Drummond's Rock Cress |
| <i>Arabis shortii</i> | Toothed Rock-cress |
| <i>Aristolochia serpentaria</i> | Virginia Snakeroot |
| <i>Arnica lanceolata</i> | Arnica |
| <i>Artemisia campestris</i> var. <i>borealis</i> | Wild Sage |
| <i>Asclepias variegata</i> | White Milkweed |
| <i>Asplenium bradleyi</i> | Bradley's Spleenwort |
| <i>Asplenium trichomanes-ramosum</i> | Green Spleenwort |
| <i>Aster ciliolatus</i> | Lindley's Aster |
| <i>Aster concolor</i> | Silvery Aster |
| <i>Aster laevis</i> var. <i>concinus</i> | Smooth Blue Aster |
| <i>Aster lanceolatus</i> var. <i>interior</i> | Tall White Aster |
| <i>Aster lateriflorus</i> var. <i>hirsuticaulis</i> | Calico Aster |
| <i>Aster oolentangiensis</i> | Sky-blue Aster |
| <i>Aster puniceus</i> var. <i>firmus</i> | Cornel-leaved Aster |
| <i>Aster radula</i> | Swamp Aster |
| <i>Astragalus neglectus</i> | Cooper's Milkvetch |
| <i>Atriplex glabriuscula</i> | Seaside Orach |
| <i>Atriplex subspicata</i> | Orache |
| <i>Bartonia paniculata</i> | Screw-stem |
| <i>Betula glandulosa</i> | Tundra Dwarf Birch |
| <i>Betula minor</i> | Dwarf White Birch |
| <i>Bidens hyperborea</i> | Estuary Beggar-ticks |
| <i>Blephilia ciliata</i> | Downy Wood-mint |
| <i>Botrychium campestre</i> | Prairie Dunewort |
| <i>Botrychium lunaria</i> | Moonwort |
| <i>Botrychium minganense</i> | Mingan Moonwort |
| <i>Botrychium oneidense</i> | Blunt-lobe Grape Fern |
| <i>Botrychium rugulosum</i> | Rugulose Grape Fern |
| <i>Bouteloua curtipendula</i> | Side-oats Grama |
| <i>Buchnera americana</i> | Blue-hearts |
| <i>Cacalia suaveolens</i> | Sweet-scented Indian-plantain |
| <i>Calamagrostis perplexa</i> | Wood Reedgrass |
| <i>Calamagrostis porteri</i> ssp. <i>porteri</i> | Porter's Reedgrass |

| Species | Common Name |
|--|-----------------------------|
| Calamagrostis stricta ssp. stricta | Northern Reedgrass |
| Callitriche hermaphroditica | Autumnal Water-starwort |
| Calypso bulbosa | Calypso |
| Cardamine rotundifolia | Mountain Watercress |
| Carex aggregata | Glomerate Sedge |
| Carex amphibola var. amphibola | Narrow-leaved Sedge |
| Carex arcta | Northern Clustered Sedge |
| Carex atherodes | Awned Sedge |
| Carex atratiformis | Black Sedge |
| Carex barrattii | Barratt's Sedge |
| Carex bullata | Button Sedge |
| Carex capillaris | Hair-like Sedge |
| Carex caroliniana | Carolina Sedge |
| Carex collinsii | Collins' Sedge |
| Carex conjuncta | Soft Fox Sedge |
| Carex decomposita | Cypress-knee Sedge |
| Carex emoryi | Emory's Sedge |
| Carex flaccosperma var. glaucoidea | Glaucous Sedge |
| Carex frankii | Frank's Sedge |
| Carex garberi | Elk Sedge |
| Carex gynocrates | Northern Bog Sedge |
| Carex haydenii | Cloud Sedge |
| Carex laxiflora var. serrulata | Loose-flowered Sedge |
| Carex livida var. radicaulis | Livid Sedge |
| Carex meadii | Mead's Sedge |
| Carex mesochorea | Midland Sedge |
| Carex nigra | Black Sedge |
| Carex nigromarginata | Black-edge Sedge |
| Carex retroflexa | Reflexed Sedge |
| Carex scirpoidea | Canadian Single-spike Sedge |
| Carex shortiana | Short's Sedge |
| Carex straminea | Straw Sedge |
| Carex striatula | Lined Sedge |
| Carex styloflexa | Bent Sedge |
| Carex sychnocephala | Many-head Sedge |
| Carex tenuiflora | Sparse-flowered Sedge |
| Carex tinctoria | Tinged Sedge |
| Carex vaginata | Sheathed Sedge |
| Carex venusta var. minor | Graceful Sedge |
| Carex wiegandii | Wiegand's Sedge |
| Castilleja coccinea | Scarlet Indian-paintbrush |
| Ceanothus herbaceus | Prairie Redroot |
| Chaerophyllum procumbens | Spreading Chervil |
| Chasmanthium laxum | Slender Spikegrass |
| Cheilanthes lanosa | Woolly Lip-fern |
| Chenopodium album var. missouriense | Missouri Goosefoot |
| Chenopodium berlandieri var. macrocalycium | Large Calyx Goosefoot |
| Collinsia verna | Blue-eyed-mary |
| Corallorhiza striata | Striped Coralroot |
| Corema conradii | Broom Crowberry |
| Cornus drummondii | Rough-leaf Dogwood |
| Crassula aquatica | Pigmyweed |
| Crataegus berberifolia | Hawthorn |
| Crataegus compacta | Compact Hawthorn |

| Species | Common Name |
|---|----------------------------|
| <i>Crataegus mollis</i> | Downy Hawthorn |
| <i>Crataegus uniflora</i> | Dwarf Hawthorn |
| <i>Crotalaria sagittalis</i> | Rattlebox |
| <i>Cuscuta cephalanthi</i> | Button-bush Dodder |
| <i>Cuscuta obtusiflora</i> var. <i>glandulosa</i> | Southern Dodder |
| <i>Cuscuta polygonorum</i> | Smartweed Dodder |
| <i>Cynoglossum virginianum</i> var. <i>boreale</i> | Northern Wild Comfrey |
| <i>Cynoglossum virginianum</i> var. <i>virginianum</i> | Wild Comfrey |
| <i>Cyperus echinatus</i> | Globose Flatsedge |
| <i>Cyperus flavescens</i> var. <i>flavescens</i> | Yellow Flatsedge |
| <i>Cyperus polystachyos</i> var. <i>texensis</i> | Coast Flatsedge |
| <i>Cyperus retrorsus</i> | Retrorse Flatsedge |
| <i>Cypripedium candidum</i> | Small White Ladyslipper |
| <i>Cypripedium parviflorum</i> var. <i>parviflorum</i> | Small Yellow Ladyslipper |
| <i>Cystopteris protrusa</i> | Lowland Fragile Fern |
| <i>Descurainia pinnata</i> ssp. <i>brachycarpa</i> | Northern Tansey-mustard |
| <i>Desmodium humifusum</i> | Spreading Tick-clover |
| <i>Desmodium laevigatum</i> | Smooth Tick-clover |
| <i>Desmodium nuttallii</i> | Nuttall's Tick-clover |
| <i>Desmodium obtusum</i> | Beggar-lice |
| <i>Desmodium pauciflorum</i> | Small-flowered Tick-clover |
| <i>Diarrhena obovata</i> | Beakgrass |
| <i>Diplachne maritima</i> | Salt-meadow Grass |
| <i>Draba glabella</i> | Rock-cress |
| <i>Dracocephalum parviflorum</i> | American Dragonhead |
| <i>Dryopteris celsa</i> | Log Fern |
| <i>Dryopteris fragrans</i> | Fragrant Cliff Fern |
| <i>Eclipta prostrata</i> | Yerba-de-tago |
| <i>Elatine americana</i> | American Waterwort |
| <i>Eleocharis elliptica</i> var. <i>pseudoptera</i> | Slender Spikerush |
| <i>Eleocharis engelmannii</i> | Engelmann's Spikerush |
| <i>Eleocharis fallax</i> | Creeping Spikerush |
| <i>Eleocharis obtusa</i> var. <i>ovata</i> | Blunt Spikerush |
| <i>Eleocharis quadrangulata</i> | Angled Spikerush |
| <i>Eleocharis tricostata</i> | Three-ribbed Spikerush |
| <i>Empetrum eamesii</i> ssp. <i>atropurpureum</i> | Purple Crowberry |
| <i>Epilobium ciliatum</i> ssp. <i>glandulosum</i> | Willow-herb |
| <i>Epilobium hornemannii</i> | Alpine Willow-herb |
| <i>Equisetum laevigatum</i> | Smooth Scouring Rush |
| <i>Erechtites hieraciifolia</i> var. <i>megalocarpa</i> | Fireweed |
| <i>Erigenia bulbosa</i> | Harbinger-of-spring |
| <i>Erigeron hyssopifolius</i> | Daisy Fleabane |
| <i>Eriophorum angustifolium</i> ssp. <i>scabriusculum</i> | Narrow-leaf Cottongrass |
| <i>Euonymus americana</i> | American Strawberry-bush |
| <i>Eupatorium aromaticum</i> | Small White Snakeroot |
| <i>Eupatorium leucolepis</i> var. <i>leucolepis</i> | White Boneset |
| <i>Eupatorium rotundifolium</i> var. <i>ovatum</i> | Round-leaf Boneset |
| <i>Eupatorium rotundifolium</i> var. <i>rotundifolium</i> | Round-leaf Boneset |
| <i>Eupatorium serotinum</i> | Late Boneset |
| <i>Euphorbia ipecacuanhae</i> | Ipecac Spurge |
| <i>Festuca saximontana</i> | Sheep Fescue |
| <i>Galium concinnum</i> | Shining Bedstraw |
| <i>Galium kamtschaticum</i> | Northern Wild-licorice |
| <i>Gaylussacia dumosa</i> var. <i>bigeloviana</i> | Dwarf Huckleberry |

| Species | Common Name |
|---------------------------------------|--------------------------|
| Gentiana saponaria | Soapwort Gentian |
| Gentianopsis procera | Lesser Fringed Gentian |
| Geocaulon lividum | Purple Comandra |
| Geum vernum | Spring Avens |
| Geum virginianum | Rough Avens |
| Gnaphalium helleri var. micradenium | Catfoot |
| Gnaphalium purpureum | Purple Everlasting |
| Gnaphalium sylvaticum | Woodland Cudweed |
| Gymnocladus dioica | Kentucky Coffee Tree |
| Hackelia deflexa var. americana | Northern Stickseed |
| Halenia deflexa | Spurred Gentian |
| Hippuris vulgaris | Mare's-tail |
| Houstonia purpurea var. calycosa | Purple Bluets |
| Houstonia purpurea var. purpurea | Purple Bluets |
| Huperzia selago | Fir Clubmoss |
| Hydrangea arborescens | Wild Hydrangea |
| Hydrocotyle ranunculoides | Floating Pennywort |
| Hydrocotyle verticillata | Water-pennywort |
| Hypericum adpressum | Creeping St. John's-wort |
| Hypericum densiflorum | Bushy St. John's-wort |
| Hypericum denticulatum | Coppery St. John's-wort |
| Hypericum hypercoides ssp. multicaule | St. Andrew's Cross |
| Ipomoea pandurata | Wild Potato-vine |
| Iris virginica var. schrevei | Southern Blueflag |
| Isoetes riparia | Quillwort |
| Isotria medeoloides | Small Whorled Pogonia |
| Juncus ambiguus | Doubtful Toad-rush |
| Juncus brachycarpus | Short-fruit Rush |
| Juncus debilis | Weak Rush |
| Juncus ensifolius | Ensiform Rush |
| Juncus marginatus var. biflorus | Large Grass-leaved Rush |
| Juncus scirpoides | Scirpus-like Rush |
| Juncus stygius ssp. americanus | Moor-rush |
| Juncus subcaudatus | Woods-rush |
| Juniperus horizontalis | Prostrate Juniper |
| Lachnanthes caroliniana | Carolina Redroot |
| Lactuca floridana | False Lettuce |
| Lactuca hirsuta | Downy Lettuce |
| Lathyrus venosus | Rough Veiny Vetchling |
| Lechea pulchella var. moniliformis | Bead Pinweed |
| Lemna perpusilla | Minute Duckweed |
| Lemna valdiviana | Pale Duckweed |
| Leucospora multifida | Leucospora |
| Liatris cylindracea | Slender Blazing-star |
| Ligusticum scoticum | Scotch Lovage |
| Lilium michiganense | Michigan Lily |
| Linum medium var. medium | Wild Flax |
| Liparis lilifolia | Large Twayblade |
| Lipocarpha micrantha | Dwarf Bulrush |
| Listera auriculata | Auricled Twayblade |
| Listera australis | Southern Twayblade |
| Listera convallarioides | Broad-lipped Twayblade |
| Lithospermum carolinense ssp. croceum | Golden Puccoon |
| Littorella uniflora | American Shore-grass |

| Species | Common Name |
|--|-----------------------------|
| Loiseleuria procumbens | Alpine Azalea |
| Luzula spicata | Spiked Woodthrush |
| Lycopodiella caroliniana | Carolina Clubmoss |
| Lycopodium complanatum | Northern Running-pine |
| Lycopodium sitchense | Sitka Clubmoss |
| Lycopus rubellus | Gypsy-wort |
| Lygodium palmatum | Climbing Fern |
| Lysimachia hybrida | Lance-leaved Loosestrife |
| Lysimachia quadriflora | Four-flowered Loosestrife |
| Lythrum lineare | Saltmarsh Loosestrife |
| Magnolia virginiana | Sweetbay Magnolia |
| Malaxis bayardii | Bayard's Malaxis |
| Malus glaucescens | American Crab |
| Melanthium virginicum | Virginia Bunchflower |
| Monarda clinopodia | Basil-balm |
| Myriophyllum pinnatum | Green Parrot's-feather |
| Najas guadalupensis var. muenscheri | Muenscher's Naiad |
| Najas guadalupensis var. olivacea | Southern Naiad |
| Najas marina | Holly-leaved Naiad |
| Oenothera laciniata | Cut-leaved Evening-primrose |
| Oldenlandia uniflora | Clustered Bluets |
| Onosmodium virginianum | Virginia False Gromwell |
| Oryzopsis canadensis | Canada Ricegrass |
| Oxypolis rigidior | Stiff Cowbane |
| Panicum leibergii | Leiberg's Panic Grass |
| Panicum oligosanthes var. oligosanthes | Few-flowered Panic Grass |
| Panicum scabriusculum | Panic Grass |
| Panicum scoparium | Velvet Panic Grass |
| Panicum stipitatum | Tall Flat Panic Grass |
| Panicum wrightianum | Wright's Panic Grass |
| Paspalum laeve var. circulare | Round Field Beadgrass |
| Paspalum laeve var. pilosum | Hairy Field Beadgrass |
| Paspalum setaceum var. psammophilum | Slender Beadgrass |
| Petasites frigidus var. palmatus | Sweet Coltsfoot |
| Phlox maculata | Wild Sweet-william |
| Phlox pilosa | Downy Phlox |
| Physalis pubescens var. integrifolia | Ground-cherry |
| Physalis virginiana | Virginia Ground-cherry |
| Physocarpus opulifolius var. intermedius | Ninebark |
| Pinus virginiana | Virginia Pine |
| Platanthera ciliaris | Orange Fringed Orchis |
| Platanthera cristata | Crested Fringed Orchis |
| Platanthera hookeri | Hooker's Orchid |
| Platanthera leucophaea | Prairie Fringed Orchid |
| Poa cuspidata | Bluegrass |
| Poa fernaldiana | Fernald Bluegrass |
| Poa glauca | White Bluegrass |
| Poa interior | Inland Bluegrass |
| Poa paludigena | Slender Marsh Bluegrass |
| Poa sylvestris | Woodland Bluegrass |
| Polygala lutea | Yellow Milkwort |
| Polygonum buxiforme | Small's Knotweed |
| Polygonum erectum | Erect Knotweed |
| Polygonum setaceum var. interjectum | Swamp Smartweed |

| Species | Common Name |
|--|---------------------------|
| <i>Polymnia uvedalia</i> | Bear's-foot |
| <i>Polystichum lonchitis</i> | Northern Holly-fern |
| <i>Potamogeton diversifolius</i> | Water-thread Pondweed |
| <i>Potamogeton filiformis</i> var. <i>alpinus</i> | Slender Pondweed |
| <i>Potamogeton filiformis</i> var. <i>occidentalis</i> | Sheathed Pondweed |
| <i>Potamogeton ogdenii</i> | Ogden's Pondweed |
| <i>Potamogeton strictifolius</i> | Straight-leaf Pondweed |
| <i>Potentilla paradoxa</i> | Bushy Cinquefoil |
| <i>Prenanthes bootii</i> | Boott's Rattlesnake-root |
| <i>Prenanthes crepidinea</i> | Nodding Rattlesnake-root |
| <i>Prenanthes nana</i> | Dwarf Rattlesnake-root |
| <i>Prunus pumila</i> var. <i>pumila</i> | Low Sand-cherry |
| <i>Ptelea trifoliata</i> | Wafer-ash |
| <i>Pterospora andromedea</i> | Giant Pine-drops |
| <i>Pycnanthemum clinopodioides</i> | Mountain-mint |
| <i>Pycnanthemum torrei</i> | Torrey's Mountain-mint |
| <i>Pycnanthemum verticillatum</i> var. <i>pilosum</i> | Whorled Mountain-mint |
| <i>Pyrola minor</i> | Mountain Pyrola |
| <i>Pyxidantha barbulate</i> | Pixies |
| <i>Quercus phellos</i> | Willow Oak |
| <i>Ranunculus cymbalaria</i> | Seaside Crowfoot |
| <i>Ranunculus hispidus</i> var. <i>nitidus</i> | Swamp Buttercup |
| <i>Rhododendron lapponicum</i> | Lapland Rosebay |
| <i>Rhynchospora torreyana</i> | Torrey's Beakrush |
| <i>Rosa acicularis</i> ssp. <i>sayi</i> | Prickly Rose |
| <i>Rosa nitida</i> | Shining Rose |
| <i>Rubus cuneifolius</i> | Sand Blackberry |
| <i>Rudbeckia hirta</i> var. <i>hirta</i> | Black-eyed-susan |
| <i>Rumex hastatulus</i> | Heart Sorrel |
| <i>Rumex maritimus</i> var. <i>fueginus</i> | Golden Dock |
| <i>Sabatia angularis</i> | Rose-pink |
| <i>Sabatia campanulata</i> | Slender Marsh-pink |
| <i>Sagina decumbens</i> | Small-flowered Pearlwort |
| <i>Sagittaria Teres</i> | Quill-leaf Arrowhead |
| <i>Salix cordata</i> | Sand Dune Willow |
| <i>Salix herbacea</i> | Dwarf Willow |
| <i>Salvia lyrata</i> | Lyre-leaf Sage |
| <i>Saxifraga oppositifolia</i> | Purple Mountain-saxifrage |
| <i>Saxifraga paniculata</i> | White Mountain-saxifrage |
| <i>Schizaea pusilla</i> | Curlygrass |
| <i>Scirpus clintonii</i> | Clinton's Clubrush |
| <i>Scirpus georgianus</i> | Georgia Bulrush |
| <i>Scirpus heterochaetus</i> | Slender Bulrush |
| <i>Scirpus maritimus</i> | Seaside Bulrush |
| <i>Scirpus novae-angliae</i> | Saltmarsh Bulrush |
| <i>Scleria minor</i> | Slender Nutrush |
| <i>Scleria pauciflora</i> var. <i>caroliniana</i> | Fewflower Nutrush |
| <i>Scleria reticularis</i> var. <i>pubescens</i> | Reticulate Nutrush |
| <i>Scleria verticillata</i> | Low Nutrush |
| <i>Scutellaria incana</i> | Hoary Skullcap |
| <i>Scutellaria integrifolia</i> | Hyssop-skullcap |
| <i>Sedum integrifolium</i> ssp. <i>leedyi</i> | Leedy's Roseroot |
| <i>Sedum rosea</i> | Roseroot |
| <i>Sedum telephoides</i> | Live-forever |

| Species | Common Name |
|-------------------------------------|----------------------------|
| Sesuvium maritimum | Sea Purslane |
| Sisyrinchium mucronatum | Michaux's Blue-eyed-grass |
| Smilax pseudo-china | False China-root |
| Smilax pulverulenta | Jacob's-ladder |
| Solidago elliotii | Coastal Goldenrod |
| Solidago houghtonii | Houghton's Goldenrod |
| Solidago rugosa ssp. aspera | Rough Goldenrod |
| Solidago rugosa var. sphagnophila | Tall Hairy Goldenrod |
| Solidago sempervirens var. mexicana | Seaside Goldenrod |
| Solidago simplex var. racemosa | Mountain Goldenrod |
| Sphenopholis obtusata var. obtusata | Prairie Wedgegrass |
| Sphenopholis pennsylvanica | Swamp Oats |
| Spiraea septentrionalis | Mountain Meadowsweet |
| Spiranthes vernalis | Spring Ladies'-tresses |
| Sporobolus clandestinus | Rough Rush-grass |
| Strophostyles umbellata | Pink Wild Bean |
| Suaeda linearis | Narrow-leaf Sea-blite |
| Suaeda rolandii | Roland's Sea-blite |
| Subularia aquatica var. americana | Water Awlwort |
| Thalictrum venulosum | Veiny Meadow-rue |
| Tipularia discolor | Crane-fly Orchid |
| Tofieldia glutinosa | Sticky False Asphodel |
| Trichomanes intricatum | Filmy Fern |
| Trichostema setaceum | Tiny Blue-curls |
| Trillium flexipes | Nodding Trillium |
| Trillium sessile | Toad-shade |
| Triphora trianthophora | Nodding Pogonia |
| Trisetum melicoides | Melic-oats |
| Utricularia inflata | Large Floating Bladderwort |
| Uvularia puberula var. nitida | Mountain Bellwort |
| Vaccinium cespitosum | Dwarf Blueberry |
| Valeriana uliginosa | Marsh Valerian |
| Valerianella chenopodiifolia | Goosefoot Corn-salad |
| Valerianella umbilicata | Corn-salad |
| Vernonia gigantea | Tall Ironweed |
| Viburnum nudum var. nudum | Possum-haw |
| Viola brittoniana var. brittoniana | Coastal Violet |
| Viola hirsutula | Southern Wood Violet |
| Viola nephrophylla | Northern Bog Violet |
| Viola novae-angliae | New England Violet |
| Vitis vulpina | Winter Grape |
| Vittaria appalachiana | Appalachian Vittaria |
| Woodsia alpina | Alpine Woodsia |
| Woodsia glabella | Smooth Woodsia |

(c) The following are threatened native plants that are likely to become endangered within the foreseeable future throughout all or a significant portion of their ranges in the State.

| Species | Common Name |
|-----------------------------------|----------------------|
| Aconitum noveboracense | Northern Monk's-hood |
| Agalinis paupercula var. borealis | Northern Gerardia |
| Agastache nepetoides | Yellow Giant-hyssop |

| Species | Common Name |
|---|--------------------------|
| <i>Agrimonia rostellata</i> | Woodland Agrimony |
| <i>Agrostis mertensii</i> | Northern Bentgrass |
| <i>Aletris farinosa</i> | Stargrass |
| <i>Allium cernuum</i> | Wild Onion |
| <i>Arabis missouriensis</i> | Green Rock-cress |
| <i>Arethusa bulbosa</i> | Swamp Pink |
| <i>Asclepias viridiflora</i> | Green Milkweed |
| <i>Asimina triloba</i> | Pawpaw |
| <i>Asplenium montanum</i> | Mountain Spleenwort |
| <i>Asplenium scolopendrium</i> var. <i>americanum</i> | Hart's-tongue Fern |
| <i>Aster borealis</i> | Rush Aster |
| <i>Aster pilosus</i> var. <i>pringlei</i> | Heath Aster |
| <i>Aster solidagineus</i> | Flax-leaf Whitetop |
| <i>Aster spectabilis</i> | Showy Aster |
| <i>Aster subulatus</i> | Saltmarsh Aster |
| <i>Betula pumila</i> | Swamp Birch |
| <i>Bidens laevis</i> | Smooth Bur-marigold |
| <i>Calamagrostis stricta</i> ssp. <i>inexpansa</i> | Northern Reedgrass |
| <i>Callitriche terrestris</i> | Terrestrial Starwort |
| <i>Cardamine longii</i> | Long's Bittercress |
| <i>Carex abscondita</i> | Thicket Sedge |
| <i>Carex backii</i> | Rocky Mountain Sedge |
| <i>Carex bicknellii</i> | Bicknell's Sedge |
| <i>Carex bigelowii</i> | Bigelow's Sedge |
| <i>Carex buxbaumii</i> | Brown Bog Sedge |
| <i>Carex chordorrhiza</i> | Creeping Sedge |
| <i>Carex crawei</i> | Crawe's Sedge |
| <i>Carex cumulata</i> | Clustered Sedge |
| <i>Carex davisii</i> | Davis' Sedge |
| <i>Carex formosa</i> | Handsome Sedge |

| Liatris borealis | Northern Blazing-star |
| Lilaeopsis chinensis | Lilaeopsis |
| Linum intercursum | Sandplain Wild Flax |
| Linum medium var. texanum | Southern Yellow Flax |
| Linum sulcatum | Yellow Wild Flax |
| Ludwigia sphaerocarpa | Globe-fruited Ludwigia |
| Megalodonta beckii var. beckii | Water-marigold |
| Minuartia glabra | Appalachian Sandwort |
| Myriophyllum alterniflorum | water milfoil |
| Myriophyllum farwellii | Farwell's Water Milfoil |
| Oenothera parviflora var. oakesiana | Evening Primrose |
| Orontium aquaticum | Golden Club |
| Oxalis violacea | Violet Wood-Sorrel |
| Panicum flexile | Wiry Panic Grass |
| Paspalum setaceum var. setaceum | Slender Beadgrass |
| Pedicularis lanceolata | Swamp Lousewort |
| Pellaea glabella | Smooth Cliff Brake |
| Pinguicula vulgaris | Butterwort |
| Plantago cordata | Heartleaf Plantain |
| Plantago maritima ssp. juncooides | Seaside Plantain |
| Podostemum ceratophyllum | Riverweed |
| Polygonum careyi | Carey's Smartweed |
| Polygonum douglassii | Douglas' Knotweed |
| Polygonum hydropiperoides var. opelousanum | Opelousa Smartweed |
| Populus heterophylla | Swamp Cottonwood |
| Potamogeton alpinus | Northern Pondweed |
| Potamogeton confervoides | Algae-Like Pondweed |
| Potamogeton hillii | Hill's Pondweed |
| Potamogeton pulcher | Spotted Pondweed |

| Species | Common Name |
|---|----------------------------|
| Potentilla anserina ssp. egedii | Silverweed |
| Primula mistassinica | Bird's-Eye Primrose |
| Proserpinaca pectinata | Comb-Leaved Mermaid-Weed |
| Prunus pumila var. depressa | Dwarf Sand-Cherry |
| Pycnanthemum muticum | Blunt Mountain-Mint |
| Pycnanthemum verticillatum var. verticillatum | Whorled Mountain-Mint |
| Pyrola asarifolia | Pink Wintergreen |
| Ranunculus micranthus | Small-Flowered Crowfoot |
| Rhododendron canadense | Rhodora |
| Rhynchospora inundata | Drowned Horned Bush |
| Rhynchospora nitens | Short-Beaked Bald-Rush |
| Rorippa aquatica | Lake-Cress |
| Rotala ramosior | Tooth-Cup |
| Sabatia stellaris | Sea-Pink |
| Sagittaria calycina var. spongiosa | Spongy Arrowhead |
| Salicornia bigelovii | Dwarf Glasswort |
| Salix pyrifolia | Balsam Willow |
| Salix uva-ursi | Bearberry Willow |
| Saxifraga aizoides | Yellow Mountain-Saxifrage |
| Scirpus cespitosus | Deer's Hair Sedge |
| Scleria triglomerata | Whip Nutrush |
| Solidago multiradiata var. arctica | Alpine Goldenrod |
| Solidago ohioensis | Ohio Golderod |
| Solidago rigida | Stiff-Leaf Goldenrod |
| Solidago simplex var. randii | Mountain Goldenrod |
| Sparganium nutans | Small Bur-Reed |
| Sporobolus heterolepis | Northern Dropseed |
| Stachys hyssopifolia | Rough Hedge-Nettle |
| Stellaria longipes | Starwort |
| Triglochin palustre | Marsh Arrow-Grass |
| Tripsacum dactyloides | Northern Gamma Grass |
| Ulmus thomasi | Cork Elm |
| Utricularia juncea | Rush Bladderwort |
| Utricularia minor | Lesser Bladderwort |
| Utricularia radiata | Small Floating Bladderwort |
| Utricularia striata | Bladderwort |
| Vaccinium boreale | High-Mountain Blueberry |
| Verbesina alternifolia | Wingstem |
| Veronicastrum virginicum | Culver's Root |
| Viburnum dentatum var. venosum | Southern Arrowwood |
| Viburnum edule | Squashberry |
| Viola primulifolia | Primrose Violet |
| Zigadenus elegans ssp. glaucus | White Camas |

(d) The following are rare native plants that have from 20 to 35 extant sites or 3,000 to 5,000 individuals statewide.

| Species | Common Name |
|------------------------|------------------------|
| Agalinis fasciculata | Fascicled Gerardia |
| Bidens bidentoides | Estuary Beggar-ticks |
| Carex lupuliformis | False Hop Sedge |
| Chamaecyparis thyoides | Atlantic White Cedar |
| Coreopsis rosea | Rose Coreopsis |
| Cyperus schweinitzii | Schweinitz's Flatsedge |

| Species | Common Name |
|---------------------------------------|------------------------|
| Drosera filiformis | Dewthread |
| Empetrum nigrum ssp. hermaphroditicum | Black Crowberry |
| Fuirena pumila | Dwarf Umbrella-sedge |
| Isoetes lacustris | Large-spored Quillwort |
| Lechea racemulosa | Illinois Pinweed |
| Lespedeza angustifolia | Bush Clover |
| Lespedeza repens | Trailing Lespedeza |
| Lespedeza violacea | Violet Lespedeza |
| Limosella australis | Mudwort |
| Linum striatum | Stiff Yellow Flax |
| Lobelia nuttallii | Nuttall's Lobelia |
| Mimulus alatus | Winged Monkeyflower |
| Minuartia caroliniana | Pine-barren Sandwort |
| Pinus banksiana | Jack Pine |
| Polemonium vanbruntiae | Jacob's-ladder |
| Polygonum glaucum | Seabeach Knotweed |
| Polygonum tenue | Slender Knotweed |
| Rhynchospora scirpoides | Long-beaked Bald-rush |
| Scheuchzeria palustris | Pod Grass |
| Trollius laxus ssp. laxus | Spreading Globeflower |
| Vaccinium uliginosum | Bog Bilberry |

(e) The following are exploitably vulnerable native plants likely to become threatened in the near future throughout all or a significant portion of their ranges within the State if causal factors continue unchecked.

| Species | Common Name |
|-----------------------------|-----------------------|
| Actaea pachypoda | White Baneberry |
| Actaea spicata ssp. rubra | Red Baneberry |
| Adiantum pedatum | Maidenhair Fern |
| Arisaema dracontium | Green Dragon |
| Asclepias tuberosa | Butterfly-weed |
| Asplenium platyneuron | Ebony Spleenwort |
| Asplenium rhizophyllum | Walking Fern |
| Asplenium ruta-muraria | Wall-Rue spleenwort |
| Asplenium trichomanes | Maidenhair Spleenwort |
| Athyrium filix-femina | Lady Fern |
| Azolla caroliniana | Mosquito-fern |
| Botrychium dissectum | Cut-leaf Grape Fern |
| Botrychium lanceolatum | Lance-leaf Grape Fern |
| Botrychium matricariifolium | Matricary Grape Fern |
| Botrychium multifidum | Leathery Grape Fern |
| Botrychium simplex | Least Moonwort |
| Botrychium virginianum | Rattlesnake Fern |
| Calopogon tuberosus | Grass Pink |
| Campanula rotundifolia | Harebell |
| Celastrus scandens | American Bittersweet |
| Chelone glabra | Turtle-heads |
| Chimaphila maculata | Spotted Wintergreen |
| Chimaphila umbellata | Pipsissewa |
| Clintonia umbellulata | Speckled Woodlily |
| Coeloglossum viride | Long-bracted Orchid |
| Conopholis americana | Squawroot |
| Corallorhiza maculata | Spotted Coralroot |

| Species | Common Name |
|--|----------------------------|
| Corallorhiza odontorhiza | Autumn Coralroot |
| Cornus florida | Flowering Dogwood |
| Cryptogramma stelleri | Slender Cliff Brake |
| Cypripedium acaule | Pink Ladyslipper |
| Cypripedium parviflorum var. makasin | Small Yellow Ladyslipper |
| Cypripedium parviflorum var. pubescens | Yellow Ladyslipper |
| Cypripedium reginae | Showy Ladyslipper |
| Cystopteris bulbifera | Bulblet Fern |
| Cystopteris fragilis | Common Fragile Fern |
| Cystopteris tenuis | Fragile Fern |
| Deparia acrostichoides | Silvery Spleenwort |
| Diplazium pycnocarpon | Glade Fern |
| Drosera intermedia | Sundew |
| Drosera rotundifolia | Sundew |
| Dryopteris campyloptera | Mountain Wood Fern |
| Dryopteris carthusiana | Spinulose Wood Fern |
| Dryopteris clintoniana | Clinton's Shield Fern |
| Dryopteris cristata | Crested Wood Fern |
| Dryopteris goldiana | Giant Wood Fern |
| Dryopteris intermedia | Common Wood Fern |
| Dryopteris marginalis | Marginal Wood Fern |
| Epigaea repens | Trailing Arbutus |
| Euonymus obovata | Running Strawberry-bush |
| Galearis spectabilis | Showy Orchis |
| Gentiana andrewsii | Closed Gentian |
| Gentiana clausa | Blind Gentian |
| Gentiana linearis | Closed Gentian |
| Gentianella quinquefolia | Stiff Gentian |
| Gentianopsis crinita | Fringed Gentian |
| Goodyera pubescens | Downy Rattlesnake-plantain |
| Goodyera repens | Dwarf Rattlesnake-plantain |
| Goodyera tessellata | Rattlesnake-plantain |
| Gymnocarpium dryopteris | Oak Fern |
| Huperzia lucidula | Shining Firmoss |
| Ilex glabra | Gallberry |
| Ilex laevigata | Smooth Winterberry |
| Ilex montana | Mountain Winterberry |
| Ilex opaca | American Holly |
| Ilex verticillata | Black Alder |
| Isotria verticillata | Large Whorled Pogonia |
| Juglans cinerea | Butternut |
| Kalmia angustifolia | Sheep Laurel |
| Kalmia latifolia | Mountain Laurel |
| Kalmia polifolia | Bog Laurel |
| Lilium canadense | Canada Lily |
| Lilium philadelphicum | Woodlily |
| Lilium superbum | Turk's-cap Lily |
| Limonium carolinianum | Sea Lavender |
| Liparis loeselii | Bog Twayblade |
| Listera cordata | Heartleaf Twayblade |
| Lobelia cardinalis | Cardinal-flower |
| Lobelia dortmanna | Water Lobelia |
| Lobelia siphilitica | Great Lobelia |
| Lycopodiella alopecuroides | Foxtail Clubmoss |

| Species | Common Name |
|------------------------------|-----------------------------|
| Lycopodiella appressa | Swamp Clubmoss |
| Lycopodiella inundata | Northern Bog Clubmoss |
| Lycopodium annotinum | Bristly Clubmoss |
| Lycopodium clavatum | Running Cedar |
| Lycopodium dendroideum | Northern Tree Clubmoss |
| Lycopodium digitatum | Running-pine |
| Lycopodium obscurum | Ground Pine |
| Lycopodium tristachyum | Ground Cedar |
| Malaxis monophyllos | White Adder's-mouth |
| Malaxis unifolia | Green Adder's-mouth |
| Matteuccia struthiopteris | Ostrich Fern |
| Mertensia virginica | Virginia Bluebells |
| Monarda didyma | Bee-balm |
| Myrica pensylvanica | Bayberry |
| Ophioglossum pusillum | Adder's-tongue |
| Opuntia humifusa | Eastern Prickly Pear |
| Osmunda cinnamomea | Cinnamon Fern |
| Osmunda claytoniana | Interrupted Fern |
| Osmunda regalis | Royal Fern |
| Panax quinquefolius | Ginseng |
| Parnassia glauca | Grass-of-parnassus |
| Pellaea atropurpurea | Purple Cliff Brake |
| Phegopteris connectilis | Northern Beech Fern |
| Phegopteris hexagonoptera | Broad Beech Fern |
| Platanthera aquilonis | Northern Green Orchid |
| Platanthera blephariglottis | White Fringed Orchid |
| Platanthera clavellata | Green Woodland Orchid |
| Platanthera dilatata | Bog-candle |
| Platanthera flava | Tuberclad Orchid |
| Platanthera grandiflora | Large Purple Fringed Orchid |
| Platanthera huronensis | Tall Northern Green Orchid |
| Platanthera lacera | Ragged Fringed Orchid |
| Platanthera obtusata | Blunt-leaved Orchid |
| Platanthera orbiculata | Large Round-leaved Orchid |
| Platanthera psycodes | Small Purple Fringed Orchid |
| Pogonia ophioglossoides | Rose Pogonia |
| Polypodium virginianum | Rock Polypody |
| Polystichum acrostichoides | Christmas Fern |
| Polystichum braunii | Braun's Holly Fern |
| Rhododendron arborescens | Smooth Azalea |
| Rhododendron maximum | Great Laurel |
| Rhododendron periclymenoides | Pinkster |
| Rhododendron prinophyllum | Early Azalea |
| Rhododendron viscosum | Swamp Azalea |
| Salvinia minima | Water-fern |
| Sanguinaria canadensis | Bloodroot |
| Sarracenia purpurea | Pitcher-plant |
| Silene caroliniana | Wild Pink |
| Spiranthes casei | Lady's-tresses |
| Spiranthes cernua | Nodding Lady's-tresses |
| Spiranthes lacera | Slender Lady's-tresses |
| Spiranthes lucida | Wide-leaved Lady's-tresses |
| Spiranthes ochroleuca | Creamy Lady's-tresses |
| Spiranthes romanzoffiana | Hooded Lady's-tresses |

| Species | Common Name |
|----------------------------|-----------------------|
| Spiranthes tuberosa | Little Lady's-tresses |
| Thelypteris noveboracensis | New York Fern |
| Thelypteris palustris | Marsh Fern |
| Thelypteris simulata | Massachusetts Fern |
| Trillium cernuum | Nodding Trillium |
| Trillium erectum | Purple Trillium |
| Trillium grandiflorum | White Trillium |
| Trillium undulatum | Painted Trillium |
| Viola pedata | Bird's-foot Violet |
| Woodsia ilvensis | Rusty Woodsia |
| Woodsia obtusa | Blunt-lobed Woodsia |
| Woodwardia areolata | Netted Chain Fern |
| Woodwardia virginica | Virginia Chain Fern |

SECTION 6

OTHER ENVIRONMENTAL ISSUES

New York Supplement, March 2010

This section covers the state requirements for Other Environmental Issues and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Agency* - a state or local agency (6 NYCC 450.2) [Added March 2008].
- *A-Weighted Sound Level* - the sound pressure level measured by the use of an instrument with the metering characteristics and A-weighting frequency response prescribed for sound level meters (6 NYCC 450.2) [Added March 2008].
- *Authorized Emergency Vehicle* - every ambulance, police vehicle, fire vehicle, and civil defense emergency vehicle (6 NYCC 450.2) [Added March 2008].
- *Coastal Area* - the state's coastal waters and the adjacent shorelands, as defined in Article 42 of the Executive Law, the specific boundaries of which are shown on the coastal area map on file in the Office of the Secretary of State, as required by Section 914(2) of the Executive Law (6 NYCC 450.2) [Added March 2008].
- *Combination of Vehicles* - any device consisting of a motor vehicle and one or more trailers drawn by such motor vehicle (6 NYCC 450.2) [Added March 2008].
- *Commissioner* - the State Commissioner of Environmental Conservation or such individual's designee (Codes, Rules, and Regulations of the State of New York, Title 6, Part 375, Section 375-1.3 (6 NYCRR 375-1.2)) [Citation Revised March 2008].
- *Commissioner* - the Commissioner of the New York State Department of Environmental Conservation (6 NYCC 450.2) [Added March 2008].
- *dB(A)* - the standard abbreviation for A-weighted sound level in decibels (6 NYCC 450.2) [Added March 2008].
- *Department* - the New York State Department of Environmental Conservation (6 NYCC 450.2) [Added March 2008].
- *Gross Weight* - the weight of a vehicle without load plus the weight of any load thereon (6 NYCC 450.2) [Added March 2008].
- *Lead Agency* - an involved agency principally responsible for undertaking, funding, or approving an action, and therefore responsible for determining whether an environmental impact statement is required in connection with the action, and for the preparation and filing of the statement if one is required (6 NYCC 450.2) [Added March 2008].
- *Motor Vehicle* - every vehicle operated or driven upon a public highway that is propelled by any power other than muscular power, except (a) electrically driven invalid chairs being operated or driven by an invalid, (b) vehicles that run only upon rails or tracks, and (c) snowmobiles as defined in article 47 of the Vehicle and Traffic Law (6 NYCC 450.2) [Added March 2008].

- *Physical Alteration* - includes, but is not limited to, the following activities: vegetation removal, demolition, stockpiling materials, grading and other forms of earthwork, dumping, filling or depositing, discharges to air or water, excavation or trenching, application of pesticides, herbicides, or other chemicals, application of sewage sludge, dredging, flooding, draining or dewatering, paving, construction of buildings, structures or facilities, and extraction, injection or recharge of resources below ground (6 NYCC 450.2) [Added March 2008].
- *Registry* - means the Registry of Inactive Hazardous Waste Disposal Sites as identified in ECL 27-1305 (6 NYCRR 375-1.2) [Citation Revised March 2008].
- *Sound Level* - the quantity in decibels measured by a sound level meter satisfying the requirements of American National Standards Specification for Sound Level Meters, S1.4-1971. This publication is available from the American National Standards Institute, Inc., 1430 Broadway, New York, N.Y. 10018. Sound level is the frequency-weighted sound pressure level obtained with the standardized dynamic characteristic "fast" or "slow" and weighting A, B or C; unless indicated otherwise, the A-weighting is understood (6 NYCC 450.2) [Added March 2008].
- *Vehicle* - every device in, upon, or by which any person or property is or may be transported or drawn upon a highway, except devices moved by human power or used exclusively upon stationary rails or tracks (6 NYCC 450.2) [Added March 2008].

**OTHER ENVIRONMENTAL ISSUES
GUIDANCE FOR NEW YORK CHECKLIST USERS**

REFER TO CHECKLIST ITEMS:

The NEPA Process

Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Missing Checklist Items O1.2.1.NY.

Process Implementation O1.3.1.NY.

Environmental Noise

Missing Checklist Items O2.2.1.NY.

State-Specific Requirements O2.5.1.NY. through O2.5.3.NY.

CERCLA Cleanup Sites

Missing Checklist Items O3.2.1.NY.

State-Specific Requirements O3.20.1.NY.

Pollution Prevention

Refer to the U.S. TEAM Guide and the DOD Component Supplements for DOD and service-specific requirements.

Missing Checklist Items O4.2.1.NY.

Program Management

Refer to the U.S. TEAM Guide and the DOD Component Supplements for DOD and service-specific requirements.

Appendix 6-1

Leq Energy Equivalent Sound Levels

(Source: 6 NYCRR 360-1.14(p)) [Citation Revised March 2008]

| Character of Community | Leq Energy Equivalent Sound Levels | |
|------------------------|------------------------------------|------------------|
| | 7 a.m. - 10 p.m. | 10 p.m. - 7 a.m. |
| Rural | 57 dB (A) | 47 dB (A) |
| Suburban | 62 dB (A) | 52 dB (A) |
| Urban | 67 dB (A) | 57 dB (A) |

The Leq is the equivalent steady-state sound level that contains the same acoustic energy as the time varying sound level during a 1-h period. It is not necessary that the measurements be taken over a full 1-h time interval, but sufficient measurements must be available to allow a valid extrapolation to a 1-h time interval.

Appendix 6-2

Allowable Sound Levels

(Source: New York Vehicle and Traffic Law, Article 10, Section 386)

Maximum Allowable A-Weighted Sound Levels for Vehicles with Maximum Gross Vehicle Weight Greater Than 10,000 lb

| Maximum Speed Limit | Sound Levels |
|-------------------------------------|------------------------|
| 35 mph* or less more than 35 mph | 86 dB (A) 90 dB (A) |

Maximum Allowable A-Weighted Sound Levels for Vehicles with Maximum Gross Vehicle Weight Equal To or Less Than 10,000 lb

| Maximum Speed Limit | Sound Levels |
|------------------------------------|------------------------|
| 35 mph or less more than 35 mph | 76 dB (A) 82 dB (A) |

Maximum Allowable A-Weighted Sound Levels for Motorcycles

| Maximum Speed Limit | Sound Levels |
|------------------------------------|------------------------|
| 35 mph or less more than 35 mph | 82 dB (A) 86 dB (A) |

Appendix 6-3

Maximum Permissible Sound Level Readings

(Source: New 6 NYCRR 450.3) [Added March 2008; Citation Revised March 2010]

| | Highway Operations Test | | | | Stationary Tests | |
|--|-------------------------|----------------|------------------|----------------|------------------|-----------|
| | Soft site | | Hard site | | Soft site | Hard site |
| | 35 mi/hr or less | Above 35 mi/hr | 35 mi/hr or less | Above 35 mi/hr | | |
| If the distance between the microphone location point and the microphone target point is- | | | | | | |
| 35 ft. (10.7 m) or more but less than 39 ft. (11.9 m) | 89 | 93 | 91 | 95 | 89 | 91 |
| 39 ft. (11.9 m) or more but less than 43 ft. (13.1 m) | 88 | 92 | 90 | 94 | 88 | 90 |
| 43 ft. (13.1 m) or more but less than 48 ft. (14.6 m) | 87 | 91 | 89 | 93 | 87 | 89 |
| 48 ft. (14.6 m) or more but less than 58 ft. (17.3 m) | 86 | 90 | 88 | 92 | 86 | 88 |
| 58 ft. (17.3 m) or more but less than 70 ft. (21.3 m) | 85 | 89 | 87 | 91 | 85 | 87 |
| 70 ft. (21.3 m) or more but less than 83 ft. (25.3 m) | 84 | 88 | 86 | 90 | 84 | 86 |

*The speeds shown refer to measurements taken at sites having speed limits as indicated. These speed limits do not necessarily have to be posted.

**Table 1 takes into account both the distance correction factors contained in s 454.2 of this Title and the ground surface correction factors contained in s 454.3 of this Title and may be used in lieu of applying these correction factors to the measured sound level.

Appendix 6-4

Type I Actions

(Source: 6 NYCRR Section 617.4) [Added March 2008]

- (a) The purpose of the list of Type I actions in this section is to identify, for agencies, project sponsors and the public, those actions and projects that are more likely to require the preparation of an EIS than Unlisted actions. All agencies are subject to this Type I list.
- (1) This Type I list is not exhaustive of those actions that an agency determines may have a significant adverse impact on the environment and requires the preparation of an EIS. However, the fact that an action or project has been listed as a Type I action carries with it the presumption that it is likely to have a significant adverse impact on the environment and may require an EIS. For all individual actions which are Type I or Unlisted, the determination of significance must be made by comparing the impacts which may be reasonable expected to result from the proposed action with the criteria listed in 6 NYCRR 617.7 (c).
 - (2) Agencies may adopt their own lists of additional Type I actions, may adjust the thresholds to make them more inclusive, and may continue to use previously adopted lists of Type I actions to complement those contained in this section. Designation of a Type I action by one involved agency requires coordinated review by all involved agencies. An agency may not designate as Type I any action identified as Type II in 6 NYCRR 617.5.
- (b) The following actions are Type I if they are to be directly undertaken, funded, or approved by an agency:
- (1) The adoption of a municipality's land use plan, the adoption by any agency of a comprehensive resource management plan, or the initial adoption of a municipality's comprehensive zoning regulations;
 - (2) The adoption of changes in the allowable uses within any zoning district, affecting 25 or more acres of the district;
 - (3) The granting of a zoning change, at the request of an application, for an action that meets or exceeds one or more of the thresholds given elsewhere in this list;
 - (4) The acquisition, sale, lease, annexation, or other transfer of 100 or more contiguous acres of land by a state or local agency;
 - (5) Construction of new residential units that meet or exceed the following thresholds:
 - (i) 10 units in municipalities that have not adopted zoning or subdivision regulations;
 - (ii) 50 units not to be connected (at the commencement of habitation) to existing community or public water and sewerage systems including sewage treatment works;
 - (iii) In a city, town, or village having a population of less than 150,000, 250 units to be connected (at the commencement of habitation) to existing community or public water and sewerage systems including sewage treatment works;
 - (iv) In a city, town, or village having a population of greater than 150,000 but less than 1,000,000, 1,000 units to be connected (at the commencement of habitation) to existing community or public water and sewerage systems including sewage treatment works; or
 - (v) In a city or town having a population of greater than 1,000,000, 2,500 units to be connected (at the commencement of habitation) to existing community or public water and sewerage systems including sewage treatment works;
 - (6) Activities, other than the construction of residential facilities, that meet or exceed any of the following thresholds; or the expansion of existing nonresidential facilities by more than 50 percent of any of the following thresholds:
 - (i) A project or action that involves the physical alteration of 10 acres;

- (ii) A project or action that would use ground or surface water in excess of 2,000,000 gallons per day;
 - (iii) Parking for 1,000 vehicles;
 - (iv) In a city, town, or village having population of 150,000 persons or less, a facility with more than 1000,000 square feet of gross floor area;
 - (v) In a city, town, or village having a population of more than 150,000 persons, a facility with more than 240,000 square feet of gross floor area;
- (7) Any structure exceeding 100 feet above original ground level in a locality without any zoning regulation pertaining to height;
- (8) Any Unlisted action that includes a nonagricultural use occurring wholly or partially within an agricultural district (certified pursuant to Agriculture and Markets Law, article 25-AA, sections 303 and 304) and exceeds 25 percent of any threshold established in this section;
- (9) Any Unlisted action (unless the action is designed for the preservation of the facility or site) occurring wholly or partially within, or substantially contiguous to, any historic building, structure, facility, site, or district or prehistoric site that is listed on the National Register of Historic Places, or that has been proposed by the New York State Board on Historic Preservation for a recommendation to the State Historic Preservation officer for nomination for inclusion in the National Register, or that is listed on the State Register of Historic Places (The National Register of Historic Places is established by 36 CFR 60 and 63, 1994);
- (10) Any Unlisted action, that exceeds 25 percent of any threshold in this section, occurring wholly or partially within or substantially contiguous to any publicly owned or operated parkland, recreation area, or designated open space, including any site on the Register of National Natural Landmarks pursuant to 36 CFR 62, 1994; or
- (11) Any Unlisted action that exceeds a Type I threshold established by an involved agency pursuant to NYCRR 617.14.

Appendix 6-5

Type II Actions

(Source: 6 NYCRR Section 617.5) [Added March 2008]

- (a) Actions or classes of actions identified in subdivision (c) of this section are not subject to review under 6 NYCRR 617. These actions have been determined not to have a significant impact on the environment or are otherwise precluded from environmental review under Environmental Conservation Law, article 8. The actions identified in subdivision (c) of this section apply to all agencies.
- (b) Each agency may adopt its own list of Type II actions to supplement the actions in subdivision (c) of this section. No agency is bound by an action on another agency's Type II list. An agency that identifies an action as not requiring any determination or procedure under 6 NYCRR 617 is not an involved agency. Each of the actions on an agency Type II list must:
 - (1) In no case, have a significant adverse impact on the environment based on the criteria contained in 6 NYCRR 617.7 (c); and
 - (2) Not be a Type I action as defined in 6 NYCRR 617.4.
- (c) The following actions are not subject to review under 6 NYCRR 617:
 - (1) Maintenance or repair involving no substantial changes in an existing structure or facility;
 - (2) Replacement, rehabilitation, or reconstruction of a structure or facility, in kind, on the same site, including upgrading buildings to meet building or fire codes, unless such action meets or exceeds any of the thresholds in 6 NYCRR 617.4;
 - (3) Agricultural farm management practices, including construction, maintenance and repair of farm buildings and structures, and land use changes consistent with generally accepted principles of farming;
 - (4) Repaving of existing highways not involving the addition of new travel lanes;
 - (5) Street openings and right-of-way openings for the purpose of repair or maintenance of existing utility facilities;
 - (6) Maintenance of existing landscaping or natural growth;
 - (7) Construction or expansion of a primary or accessory/appurtenant, nonresidential structure, or facility involving less than 4,000 square feet of gross floor area and not involving a change in zoning or a use variance and consistent with local land use controls, but not radio communication or microwave transmission facilities;
 - (8) Routine activities of educational institutions, including expansion of existing facilities by less than 10,000 square feet of gross floor area and school closing, but not changes in use related to such closings;
 - (9) Construction or expansion of a single-family, a two-family, or a three-family residence on an approved lot including provision of necessary utility connections as provided in paragraph (11) and the installation, maintenance, and/or upgrade of drinking water well and a septic system;
 - (10) Construction, expansion, or placement of minor accessory/appurtenant residential structures, including garages, carports, patios, decks, swimming pools, tennis courts, satellite dishes, fences, barns, storage sheds, or other buildings not changing land use or density;
 - (11) Extension of utility distribution facilities, including gas, electric, telephone, cable, water, and sewer connections to render service in approved subdivisions or in connection with any action on this list;
 - (12) Granting of individual setback and lot line variances;
 - (13) Granting of an area variance(s) for a single-family, two-family, or three-family residence;
 - (14) Public or private best forest management (silvicultural) practices on less than 10 acres of land, but not including waste disposal, land clearing not directly related to forest management, clear-cutting or the application of herbicides or pesticides;
 - (15) Minor temporary uses of land having negligible or no permanent impact on the environment;
 - (16) Installation of traffic control devices on existing streets, roads, and highways;
 - (17) Mapping of existing roads, streets, highways, natural resources, land uses, and ownership patterns;
 - (18) Information collection including basic data collection and research, water quality, and pollution studies, traffic counts, engineering studies, surveys, subsurface investigations, and soils studies that do not commit the agency to undertake, fund, or approve any Type I or Unlisted action;

- (19) Official acts of a ministerial nature involving no exercise of discretion, including building permits and historic preservation permits where issuance is predicated solely on the applicant's compliance or noncompliance with the relevant local building or preservation codes(s);
- (20) Routine or continuing agency administration and management, not including new programs or major reordering of priorities that may affect the environment;
- (21) Conducting concurrent environmental, engineering, economic, feasibility, and other studies and preliminary planning and budgetary processes necessary to the formulation of a proposal for action, provided those activities do not commit the agency to commence, engage in, or approve such action;
- (22) Collective bargaining activities;
- (23) Investments by or on behalf of agencies or pension or retirement systems, or refinancing existing debt;
- (24) Inspections and licensing activities relating to the qualifications of individuals;
- (25) Purchase or sale of furnishings, equipment, or supplies, including surplus government property, other than the following: land, radioactive material, pesticides, herbicides, or other hazardous materials;
- (26) License, lease and permit renewals, or transfers of ownership thereof, where there will be no material change in permit conditions or the scope of permitted activities;
- (27) Adoption of regulations, policies, procedures, and local legislative decisions in connection with any action on this list;
- (28) Engaging in review of any part of an application to determine compliance with technical requirements, provided that no such determination entitles or permits the project sponsor to commence the action unless and until all requirements of 6 NYCRR 617 have been fulfilled;
- (29) Civil or criminal enforcement proceedings, whether administrative or judicial, including a particular course of action specifically required to be undertaken pursuant to a judgment or order, or the exercise of prosecutorial discretion;
- (30) Adoption of a moratorium on land development or construction;
- (31) Interpreting an existing code, rule, or regulation;
- (32) Designation of local landmarks or their inclusion within historic districts;
- (33) Emergency actions that are immediately necessary on a limited and temporary basis for the protection or preservation of life, health, property, or natural resources, provided that such actions are directly related to the emergency and are performed to cause the least change or disturbance, practicable under the circumstances, to the environment; any decision to fund, approve, or directly undertake other activities after the emergency has expired is fully subject to the review procedures of 6 NYCRR 617;
- (34) Actions undertaken, funded, or approved prior to the effective dates set forth in SEQR, except in the case of an action where it is still practicable either to modify the action in such a way as to mitigate potentially adverse environmental impacts, or to choose a feasible or less environmentally damaging alternative, the commissioner may, at the request of any person, or on his own motion, require the preparation of an environmental impact statement; or, in the case of an action where the responsible agency proposed a modification of the action and the modification may result in a significant adverse impact on the environment, and environmental impact statement must be prepared with respect to such modification;
- (35) Actions requiring a certificate of environmental compatibility and public need under articles VII, VIII or X of the Public Service Law and the consideration of, granting or denial of any such certificate;
- (36) Actions subject to the class A or class B regional project jurisdiction of the Adirondack Park Agency or a local government pursuant to section 807, 808, and 809 of the Executive Law, except class B regional projects subject to review by local government pursuant to section 807 of the Executive Law located within the Lake George Park as defined by subdivision one of section 43-0103 of the Environmental Conservation law; and
- (37) Actions of the Legislature and the Governor of the State of New York or of any court, but not actions of local legislative bodies except those local legislative decisions such as rezoning where the local legislative body determines the action will not be entertained.

SECTION 7

PESTICIDE MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Pesticide Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Accident* - an unexpected, undesirable event, caused by the use or presence of a pesticide, that adversely affects humans or the environment (6 NYCRR 325.1) [Citation Revised March 2008; Citation Revised March 2010].
- *Agricultural Animal* - any animal that is raised to produce food, clothing or other saleable commodity, along with large farm animals, including but not limited to: horses, mules and oxen (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
- *Agricultural Commodity* - any plant or part thereof, or animal, or animal product, produced by an individual (including farmers, ranchers, vineyardists, plant propagators, Christmas tree growers, aquaculturists, floriculturists, orchardists, foresters, or other comparable persons) primarily for sale, consumption, propagation or other use by humans or animals (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
- *Aircraft* - any contrivance now known or hereafter invented, used or designed for navigation of, or flight in, the air (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
- *Antimicrobial Agents* -
 1. disinfectants intended to destroy or irreversibly inactivate infectious or other undesirable bacteria, pathogenic fungi, or viruses on surfaces or inanimate objects
 2. sanitizers intended to reduce the number of living bacteria or viable virus particles on inanimate surfaces, in water, or in air
 3. bacteriostats intended to inhibit the growth of bacteria in the presence of moisture
 4. sterilizers intended to destroy viruses and all living bacteria, fungi and their spores, on inanimate surfaces
 5. fungicides and fungistats intended to inhibit the growth of, or destroy, fungi (including yeasts), pathogenic to man or other animals on inanimate surfaces
 6. commodity preservatives and protectants intended to inhibit the growth of, or destroy bacteria in or on raw materials (such as adhesives and plastics) used in manufacturing, or manufactured products (such as fuel, textiles, lubricants, and paints), but not in the pulp and paper process or cooling towers (6 NYCRR 325.1) [Citation Revised March 2010].
- *Anti-siphoning Device* - the use of a backflow prevention device that uses a reduced pressure zone device or an air gap separation between a water source and the overflow of a receptacle (i.e., spray tank, mixing tank, dipping vat, etc.) containing pesticides, to prevent contaminated water from siphoning back into a water supply (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
- *Application of Pesticides* - the placement for effect of a pesticide at or on the location where pest control is desired (6 NYCRR 325.1) [Revised January 2001; Citation Revised March 2010].
- *Basement* - the area below the main floor of a structure that is 5 ft or greater in height, as measured from the floor to the underside of floor joists, and is contained either wholly or in part by a foundation (6 NYCRR 325.1) [Revised January 1998; Citation Revised March 2010].

- *Certification* - The recognition by the Commissioner that a person is competent and thus authorized to use or supervise the use of pesticides (6 NYCRR 325.1) [Citation Revised March 2010].
- *Certified Pesticide Applicator* - a commercial or private pesticide applicator who is certified by the department to use, supervise the use of, or train another individual in the use of any pesticide in any category of use covered by the individual's certification or any individual who is certified to sell restricted use pesticides as described in subdivision 325.16(l) (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
- *Certified Commercial Pesticide Applicator* - a certified applicator who is certified by the department to use or supervise the use of any commercial application of pesticides or to sell or supervise the sale of a restricted use pesticide as described in subdivision 325.16(l) (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
- *Certified Commercial Pesticide Technician* - an individual who is at least 17 years of age and is certified to engage in the following: (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
 1. commercial use of any general use or unclassified pesticide without supervision; or
 2. use of any pesticide when working under the direct supervision of a certified commercial pesticide applicator.
- *Certified Private Pesticide Applicator* - a certified applicator who is at least 17 years old and uses or supervises the private application of restricted use pesticides for purposes of producing any agricultural commodity (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
- *Chemigation* - the application of a chemical via an irrigation system by introducing or injecting the chemical into the water flowing through the system (6 NYCRR 325.1) [Added January 2001; Citation Revised March 2010].
- *Cistern* - a reservoir used for the collection and storage of water, and constructed either wholly or partially underground, including those constructed in a manner that shares part of the foundation in its construction. A stone-filled well with a capacity of less than 60 gal or a septic or sewerage system is not considered a cistern for the purpose of this section (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Commercial Application of Pesticides* - any application of any pesticide except as defined in "private" or "residential" application of pesticides (6 NYCRR 325.1) [Revised January 2001; Citation Revised March 2010].
- *Commercial Pesticide Apprentice* - an individual who has met the requirements enumerated in section 325.10, is at least 16 years of age, and is working under the direct supervision of a certified commercial pesticide applicator (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Commercial Permit* - the permit issued by the commissioner for the distribution, sale, offer for sale, purchase for the purpose of resale, or possession for the purpose of resale, of a restricted pesticide (6 NYCRR 326.1) [Citation Revised March 2010].
- *Commercial Permit Holder* - the person to whom a commercial permit is issued (6 NYCRR 326.1) [Citation Revised March 2010].
- *Commissioner* - the Commissioner of the Department of Environmental Conservation or a designated agents (6 NYCRR 325.1) [Revised January 2001; Citation Revised March 2010].
- *Competent* - properly qualified to perform functions associated with pesticide use (6 NYCRR 325.1) [Revised January 2001; Citation Revised March 2010].
- *Contamination* - the presence of a pesticide or pesticides, in or on areas other than the target area, in quantities which are or may be injurious to human or the environment (6 NYCRR 325.1) [Revised January 2001; Citation Revised March 2010].

- *Crawl space* - the area below the main floor of a structure that is less than 5 ft in height, as measured from the floor to the underside of the floor joists, and is contained either wholly or in part by a foundation (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Department* - the Department of Environmental Conservation (6 NYCRR 325.1) [Citation Revised March 2010].
- *ECL* - the Environmental Conservation Law (6 NYCRR 325.1) [Citation Revised March 2010].
- *Environment* - water, air, land, and all plants and man and other animals living therein, and the inter-relationships that exist among them (6 NYCRR 325.1) [Citation Revised March 2010].
- *Excavation/treated backfill technique* - application of termiticide in the following manner: (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010]
 1. trench and remove soil to be treated onto heavy plastic sheeting or similar material, or into a wheelbarrow or other device which prevents introduction of termiticide to the environment;
 2. treat excavated soil according to the label directions. Mix termiticide dilution thoroughly into the soil in such a manner that termiticide runoff or spillage does not occur; and
 3. after treated soil has completely absorbed the termiticide dilution, replace treated soil in the trench.
- *Dwelling* - any building or structure or portion thereof which is occupied in whole or in part as a home residence or sleeping place for one or two families (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Emergency Pesticide Application* - an unanticipated non-routine application of a pesticide made in response to an imminent threat to human health or property that requires immediate application (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Footing* - a masonry support that underlies a foundation (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Forest* - a concentration of trees and related vegetation, with tree crowns usually interlocking, in non-urban areas sparsely inhabited by and infrequently used by humans; characterized by natural terrain and drainage patterns (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Foundation* - a wall, slab, post, pier, column or pillar that supports a structure (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Fumigant* - any pesticide product that is a vapor or gas, or forms a vapor or gas on application, and whose pesticidal action is through the gaseous state (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *General Use Pesticide* - a pesticide which does not meet the state criteria for a restricted pesticide as established under authority of section 33-0303 of Article 33 of the New York State Environmental Conservation Law (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Ground Equipment* - any machine or device (other than aircraft) for use on land or water, designed for, or adaptable to use in applying a pesticide as a spray, dust, aerosol, or in any other form (6 NYCRR 325.1) [Citation Revised March 2010].
- *Hazard* - a probability that a given pesticide will have an adverse effect on the environment in a given situation, the relative likelihood of danger or ill effect being dependent on a number of interrelated factors present at any given time (6 NYCRR 325.1) [Citation Revised March 2010].

- *Integrated Pest Management (IPM)* - a systematic approach to managing pests which focuses on long-term prevention or suppression with minimal impact on human health, the environment and nontarget organisms. IPM incorporates all reasonable measures to prevent pest problems by properly identifying pests, monitoring population dynamics, and utilizing cultural, physical, biological or chemical pest population control methods to reduce pests to acceptable levels (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Label* - the written, printed or graphic matter on or attached to the pesticide, its immediate container and any outside containers or wrappers (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Labeling* - all labels and other written, printed, or graphic matter: (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010]
 1. upon the pesticide or any of its containers or wrappers;
 2. accompanying the pesticide at any time;
 3. to which reference is made on the label or in literature accompanying the pesticide, except when accurate, non-misleading reference is made to current official publications of the United States Departments of Agriculture or Interior, the United States Public Health Service, state agricultural experiment stations, state colleges of agriculture, or other similar federal institutions or official agencies of this state or other states authorized by law to conduct research in the field of pesticides.
- *Metabolite* - any substance produced in or by living organism by biological processes and derived from a pesticide (6 NYCRR 325.1) [Citation Revised March 2010].
- *Microbial Pesticide* - any pesticide that is classified by the United States Environmental Protection Agency as a microbial pesticide and whose active ingredients consist of living microbial entities capable of survival, growth, reproduction and infection (i.e., bacteria, fungi, viruses and protozoans) (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Nontarget Organism* - a plant or animal other than the one the pesticide is meant to control (6 NYCRR 325.1) [Citation Revised March 2010].
- *Persistence* - the pesticide or its metabolite remains at or near the point of application for more than 1 yr (6 NYCRR 325.1) [Citation Revised March 2010].
- *Person* - any individual, public or private corporation, political subdivision, government agency, department or bureau of the State, municipality, industry, co-partnership, association, firm, trust, estate or any other legal entity whatsoever (6 NYCRR 325.1) [Citation Revised March 2010].
- *Personal Protective Equipment* - apparel and devices worn to protect the body from contact with pesticides or pesticide residues, including: coveralls, chemical-resistant suits, gloves, footwear, aprons and headgear, protective eyewear, and respirators (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Pesticide* - any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any insects, rodents, fungi, weeds, or other forms of plant or animal life or viruses, except viruses on or in living human or other animals, which the Commissioner shall declare to be a pest and any substance or mixture of substances intended as a plant regulator, defoliant or desiccant (6 NYCRR 325.1) [Revised January 2001; Citation Revised March 2010].
- *Pesticide Use* - performance of the following pesticide-related activities: application; mixing; loading; transport, storage or handling after manufacturer's seal is broken; cleaning of pesticide application equipment; and any required preparation for container disposal (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Plenum Air Space* - any space under a structure that functions as or is designed to function as a channel for air circulated within the structure (6 NYCRR 325.1) [Revised January 1998; Citation Revised March 2010].

- *Private Application of Pesticides* - the application of a restricted use pesticide on property used for the production of an agricultural commodity, such property being owned or rented by the applicator or the applicator's employer or (if applied without compensation other than trading of personal services between producers of agricultural commodities) on the property of another person (6 NYCRR 325.1) [Citation Revised March 2010].
- *Private Applicator* - a certified applicator who uses or supervises the use of restricted use pesticides for purposes of producing any agricultural commodity on property owned or rented by the applicator or the applicator's employer or (if applied without compensation other than trading of personal services between producers of agricultural commodities) on the property of another person. Regulations concerning private application may be found the New York Pesticide Rules and Regulations sections 325.37-325.44. Uncertified applicators can apply to the Department for a special permit to use a particular restricted use pesticide (6 NYCRR 325.1) [Citation Revised March 2010].
- *Private Dwelling* - any building or structure designed and occupied exclusively for residence purposes by not more than two families (6 NYCRR 325.1) [Citation Revised March 2010].
- *Purchase Permit* - the permit to be issued by the commissioner for the purchase, possession, or use of a restricted use pesticide. Whenever used in these protocols, this term also means, as an alternative, a certification identification card (6 NYCRR 326.1) [Citation Revised March 2010].
- *Purchase Permit Holder* - the person to whom a purchase permit is issued (6 NYCRR 326.1) [Citation Revised March 2010].
- *Reduced Pressure Zone Device* - a minimum of two independently active check valves, together with an automatically operated pressure differential relief valve located between the two check valves. During normal flow and at the cessation of normal flow, the pressure between these two check valves must be less than the upstream (supply) pressure. In case of leakage of either check valve, the differential relief valve must operate to maintain the pressure between the check valves at less than the upstream (supply) pressure by discharging to the atmosphere. The unit must include tightly closing shutoff valves located at each end of the device and each device must be fitted with properly located test cocks (6 NYCRR 325.1) [Added January 1998. Citation Revised March 2010].
- *Residential Application of Pesticides* - the application of general use pesticides by ground equipment on property owned or leased by the applicator, excluding any establishments selling or processing food and any residential structure other than the specific dwelling unit in which the applicator resides (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Restricted Use Pesticide* or *Restricted Pesticide* - a pesticide that is classified for restricted use under the provision of article 33 of the Environmental Conservation Law or under section 3(d)(1)(C) of the *FIFRA*, as amended (6 NYCRR 325.1) [Revised January 2001; Citation Revised March 2010].
- *Retreatment* - the reapplication or repeat of an application of a pesticide, whether or not it is the same concentration or formulation as applied initially, to a structure or an area of a structure, provided the application is for the control of the same pest as initially treated (6 NYCRR 326.1) [Added January 1998; Citation Revised March 2010].
- *Rodding* - the subsurface ground application of termiticide by means of the insertion of hollow tubes through which the termiticide is delivered (6 NYCRR 325.1) [Revised January 1998; Citation Revised March 2010].
- *Structure* - any walled and roofed building (6 NYCRR 325.1) [Revised January 1998; Citation Revised March 2010].

- *Subsurface ground application* - the placement of any liquid termiticide below-grade or underneath a slab by rodding, trenching, excavation/treated backfill technique, or other means (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Termiticide* - any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating subterranean termites (6 NYCRR 325.1) [Added January 1998; Citation Revised March 2010].
- *Three-Rinse Technique* - after normal emptying, the container is allowed to drain in a vertical position for 30 s. The container is rinsed three times with water or the pesticide carrier being used, allowed 30 s for draining after each rinse. Rinse material should be easily measurable. Use one quart for each rinse of a 1 gal can or jug, a gallon for each 5-gal can and 5 gal for either 30 or 55 gal drums. Drain each into the spray tank before filling it to the desired level or drain into suitable containers for use as a diluent for future formulation of the same pesticide (6 NYCRR 325.1) [Citation Revised March 2010].
- *Trenching* - the subsurface ground application of termiticide by means of the excavation of a narrow ditch and application of termiticide into the ditch or to the excavated soil as it is being replaced (6 NYCRR 325.1) [Revised January 1998; Citation Revised March 2010].
- *Under the Direct Supervision of* - the act or process in which the application of a pesticide is made by a certified commercial pesticide technician or commercial pesticide apprentice acting under the instruction, control and authorization of a certified commercial applicator employed by the same registered business or agency or an individual acting under the instruction and control of a certified private pesticide applicator who is responsible for the actions of that individual (6 NYCRR 325.1) [Revised January 2001; Citation Revised March 2010].

Appendix 7-1

Categories of Commercial Applicators

(6 NYCRR 325.16) [Revised January 2001; Citation Revised March 2008]

Agricultural and animal pest control.

- (1) Plant. This subcategory includes commercial applicators using or supervising the use of pesticides, including chemigation, in production of agricultural crops, including but not limited to corn, alfalfa, feed grains, soybeans and forage; vegetables; small fruits; tree fruits and nuts; on grasslands; noncrop agricultural lands; and sod, flowers and shrubs.
- (2) Agricultural Animals. This subcategory includes commercial applicators using or supervising the use of pesticides on animals, including but not limited to, beef cattle, dairy cattle, swine, sheep, horses, goats, poultry and livestock, as well as to places on or in which animals are confined.
- (3) Companion Animals. This subcategory includes commercial applicators using or supervising the use of pesticides on companion animals.
- (4) Fumigation of Soil and Agricultural Commodities. This subcategory includes commercial applicators using or supervising the use of pesticides for soil fumigation in production of agricultural commodities and the use of pesticides for fumigation of agricultural commodities. Certification in this subcategory requires concurrent certification in Subcategory (1), Agricultural Plant Pest Control.

Forest pest control.

This category includes commercial applicators using or supervising the use of pesticides to control pests in forests, forest nurseries, forest seed producing areas and forested areas within urban settings.

Ornamental and turf pest control.

This category includes commercial applicators using or supervising the use of pesticides to control pests in the maintenance and production of ornamental and shade trees, shrubs, flowers and turf, interior plant maintenance, greenhouses and nurseries, flood control structures, golf courses, outdoor broadcast treatments for fleas, ticks, and other such pests, forest insects or disease control for aesthetic purposes. This category also includes the use of animal repellents on lawns or shrubs. The turf subcategory also includes pre- or post-construction herbicide treatment for driveways, parking lots and other such facilities. This category contains, but is not limited to, the following subcategories:

- (1) ornamentals, shade trees and turf;
- (2) turf; and
- (3) interior plant maintenance.
- (d) Seed treatment.

This category includes commercial applicators using or supervising the use of pesticides on seeds intended for planting on property not owned or leased by the applicator, including seed treaters who apply pesticides to seeds of other individuals and seed plant operators treating seeds before or after sale.

Aquatic pest control.

This category includes commercial applicators using or supervising the use of any pesticide purposefully applied to standing or running water, excluding applicators engaged in public health-related activities included in subdivision (h) of this section. This category contains, but is not limited to, the following subcategories:

- (1) Aquatic vegetation control. This subcategory includes control of algae and weeds in swimming pools and in any surface waters of the State classified pursuant to Article 17 of the Environmental Conservation Law.
- (2) Aquatic insect and miscellaneous aquatic organisms control. This subcategory includes the control of aquatic insects such as mosquito and black fly larva and miscellaneous organisms such as mollusks, leeches and snails.
- (3) Aquatic fish control. This subcategory includes treatment to control or eliminate unwanted fish including sea lamprey.
- (4) Aquatic antifouling paints. This subcategory includes application of aquatic antifoulant paints and preservatives.

- (5) Sewer line root control. This subcategory includes the use of pesticides to eliminate tree roots from sewers and other discharge pipes.

Rights-of-way pest control.

This category includes commercial applicators using or supervising the use of pesticides in the maintenance of highways, electric power lines, gas or other pipelines, railway rights-of-way and other related facilities such as, but not limited to, the areas around generating stations, substations, pumping stations and associated buildings and in-place applications to utility poles.

- (1) Rights-of-way industrial vegetation control. This subcategory includes commercial applicators using or supervising the use of pesticides in the maintenance of rights-of-way and related facilities.
- (2) Rights-of-way in place pole treatments. This subcategory includes commercial applicators using or supervising the use of pesticides for protecting in-place utility poles, including the use of pole fumigants.

Industrial, institutional and structural pest control.

This category includes commercial applicators using or supervising the use of pesticides in, on or around food handling establishments, dwellings, institutions such as schools and hospitals, industrial establishments, including warehouses and grain elevators and any other structures and adjacent areas, public or private; and for the protection of stored, processed or manufactured products. Fumigation may only be performed by individuals certified in the fumigation or food processing subcategories, except for individuals applying general use fumigants to in-place wood poles. Applicators using fumigants in food facilities must be certified in the food processing subcategory. This category contains, but is not limited to, the following subcategories:

- (1) Structural and rodent. This subcategory includes pests, such as but not limited to, rodents, roaches, ants, fleas, ticks and stinging and biting insects within or associated with structures, excluding food processing areas and post construction wood destroying organisms, This subcategory does not include application of termiticides.
- (2) Fumigation. This subcategory includes, but is not limited to,: fumigant use for rodent control in structures; elimination of experimental laboratory rodents; rodent and mole control (fumigation of burrows); pest control in raw food commodity storage, transportation facilities, trucks, railroad cars, vehicles and food processing establishments.
- (3) Termite. This subcategory includes the control of termites.
- (4) Lumber and wood products. This subcategory includes: preserving poles and lumber; pesticide applications at logging decks; and activities associated with construction not covered by other categories.
- (5) Food processing. This subcategory includes commercial pesticide applications to areas other than individual residences, where exposed food or food products are prepared, packaged or held for further distribution or consumption, including the use of fumigants to control appropriate food pests.
- (6) Cooling towers, pulp and paper process. This subcategory includes the use of antimicrobials to control bacteria and other such single cell organisms.
- (7) Other.

Public health pest control.

This category includes State, Federal or other governmental personnel, their contractors and other commercial applicators using or supervising the use of pesticides in public health programs for the management and control of pests having medical and public health importance.

Regulatory pest control.

This category includes State, federal or other governmental personnel who use, or supervise the use of pesticides in the control of regulated pests, including New York State Department of Agriculture and Markets personnel (veterinarians and horticultural, food and apiary inspectors) and United States Department of Agriculture personnel.

Demonstration and research pest control.

Certification in this category requires concurrent certification in a second category of specialty. This category includes, but is not limited to, the following:

- (1) individuals who demonstrate to the public the proper use and techniques of application of pesticides or who supervise such demonstration, including master gardeners, cooperative extension agents, soil and water conservation personnel; and

- (2) individuals conducting or supervising field research with pesticides, including State, federal, university personnel and other individuals conducting field research on or utilizing pesticides.

Aerial pest control.

This category includes all pilots engaged in commercial or private aerial pesticide applications. This category is specific to the actual application of pesticides by air and does not include making pesticide recommendations associated with the application.

Aerial applicators providing services associated with pest management, such as making pesticide recommendations, must obtain concurrent certification in the appropriate category.

Sales.

This category includes individuals who sell, distribute or supervise the sale or distribution of restricted use pesticides. Such individuals are not authorized to commercially use pesticides without obtaining a second category of specialty.

Appendix 7-2

Restricted Pesticides

(6 NYCRR Section 326.2) [Citation Revised March 2008; Citation Revised March 2010]

Restricted pesticides include all those pesticides Federally restricted as well as the additional pesticides listed below. Pesticides from the Federal list that are also listed below are subject to specific restrictions in New York. The following pesticides may be distributed, sold, purchased, possessed, and used only by holders of commercial permits or purchase permits. All concentrations are restricted unless otherwise indicated:

| | |
|--|--|
| Acrolein | Cyclohexamide (Actidione) - concentrations over 1.3 percent |
| Acrylonitrile | Daminozide (Alar) |
| Aluminum phosphide (Phostoxin) | Dasanit |
| Antu - concentrations over 29 percent | Demeton (Systox) |
| Avitrol | Dinitrophenol - concentrations above 0.7 percent |
| Azodrin | Dinoseb (DNBP) or (DNOSBP) |
| Bidrin | Dioxathion (Delnav) |
| Bomyl | Diphacinone - concentrations over 3 percent |
| Brodifacoum (Talon) - concentrations above 0.005 percent | Di-Syston - concentrations above 2 percent |
| Bromadialone (Maki) - concentrations above 0.005 percent | DNOC |
| Bromethalin - concentrations above 0.01 percent | DNOCHP |
| Carbofuran (Furadan) | Dyfonate |
| Carbon disulfide | Endosulfan (Thiodan) |
| Carbophenothion (Trithion) - concentrations above 5 percent | EPN |
| Chlorofenvinphos (Birlane) - concentrations above 0.5 percent (NOTE: Resin strips such as flea collars, cattle eartags and other impregnated resin products are not restricted.) | Ethion - concentrations above 3 percent and granular formulations above 6 percent |
| Chlorophacinone (Rozol) - concentrations above 0.05 percent | Ethoprop (Mocap) |
| Chloropicrin | Famphur |
| Chlorpyrifos - all formulations labeled for termite control by subsurface ground insertion | Fenamiphos (Nemacur) |
| Cholecalciferol (Quintox) - concentrations above 0.075 percent | Fenthion (Baytex) - concentrations above 0.5 percent |
| Cyanides (calcium and inorganic cyanides, liquid hydrogen cyanide) | Formetanate hydrochloride (Carazol SP) |
| Fumarin - concentrations above 3 percent | Phosdrin |
| Guthion | Phosphamidon, |
| Isofenphos (Oftanol, Amaze) - concentrations above 2 percent | Phosphorus (white or yellow) |
| Lethane 384 | Pival - concentrations above 3 percent |
| Magnesium phosphide | PMP, Valone - concentrations above 6 percent |
| Methiocarb (Mesurol) - concentrations above 2 percent | Randox |
| Methomyl (Lannate) - concentrations above 1 percent | Schraden (OMPA) |
| Methyl bromide | Strychnine and its salts |
| Methyl parathion | Sulfotepp |
| Mexacarbate (Zectran) - concentrations above 2 percent | Sulfuryl fluoride (Vikane) |
| Monitor | Supracide |
| Nicotine alkaloid - concentrations above 1 percent | Terbufos (Counter) |
| Nicotine salts - concentrations above 40 percent nicotine expressed as alkaloid | TEPP |
| Paraquat - concentrations above 0.2 percent | Vapona - concentrations above 1 percent (NOTE: Resin strips such as flea collars, bird perches and other impregnated resin products are not restricted.) |
| Parathion | Warfarin - concentrations above 3 percent |
| Pentachlorophenol - concentrations above 5 percent | |
| Permethrin - formulations labeled for termite control by | |

subsurface ground insertion
Phorate (Thimet)

Zinc phosphide - concentrations above 2 percent
Zinophos

The following pesticides may be distributed, sold, purchased, possessed, and used only by holders of commercial permits or purchase permits for specific purposes:

- Aldicarb (Temik)
- Inorganic arsenic compounds
- Arsenious oxide
- Calcium arsenate
- Lead arsenate
- Magnesium arsenate; Paris green and other inorganic arsenicals not specifically covered
- Soluble arsenics, including arsenic trioxide (above 1.5 percent), sodium arsenite (above 2 percent), and sodium arsenate (above 5 percent)
- Dicamba (Banvel D)
- Lindane
- Sodium fluoroacetate
- Endrin
- Oxamyl
- Tributyltin.

The following pesticides may not be distributed, sold, purchased, possessed, or used for any purpose:

- Aldrin
- Bandane
- BHC
- Chlordane
- DBCP
- DDD, TDE
- DDT
- Dieldrin
- Heptachlor
- Mercury compounds
- Selenites and selenates
- Silvex
- Strobane
- 2,4,5,-T
- Thallium
- Toxaphene.

The distribution, sale, purchase, possession, or use of aldicarb for use on potatoes in Nassau and Suffolk County is forbidden.

The inground use of oxamyl is permitted in the counties of Nassau and Suffolk on only those lands on which cropping has been restricted by contract with the Department of Agriculture.

SECTION 8

PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT

New York Supplement, March 2010

This section covers state requirements for the management of petroleum, oil, and lubricants (POL) and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Aboveground Used Oil Tank* - any stationary device used to store or process used oil, that is designed to contain an accumulation of used oil, which is constructed primarily of nonearthen materials (e.g., wood, concrete, steel, plastic), which provides structural support and is not an underground used oil tank (6 NYCRR 360-14.2).
- *Area of Environmental Value* - an area used for waterfowl nesting and feeding, fish spawning and migration, shellfish beds, or wetlands, or significant habitats as determined by the Department (6 NYCRR 611.2).
- *Chemical Waste* - liquid or semiliquid waste other than waste oil, including, but not limited to, spent solvents, tars, paints, resins, and wastes and sludges from any process (6 NYCRR 225-2.2).
- *Commissioner* - the Commissioner of Environmental Conservation or a duly authorized representative (6 NYCRR 364.1(c)).
- *Container* - any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled (6 NYCRR 360-14.2).
- *Containment or To Contain* - all actions to limit or prevent the spread of a petroleum discharge (6 NYCRR 611.2).
- *Department* - the New York State Department of Environmental Conservation (6 NYCRR 364.1(c)).
- *Discharge* - any intentional or unintentional action or omission resulting in the releasing, spilling, leaking, pumping, pouring, emitting, emptying, or dumping of petroleum into the waters of the state or onto lands from which it might flow or drain into said waters, or into waters outside the jurisdiction of the State when damage may result to the lands, waters, or natural resources within the jurisdiction of the State, excepting discharges pursuant to and in compliance with the conditions of a valid State or Federal permit (6 NYCRR 611.2).
- *Disposal* - the abandonment, discharge, deposit, injection, dumping, spilling, leaking, or placing of any waste or hazardous waste on or into any lands or waters of the state so that such waste or hazardous waste or any related constituent thereof may enter the environment or be emitted into the air or be discharged into any waters, including groundwaters thereof. Disposal also means the thermal destruction of waste or hazardous waste and the burning of such wastes as fuel for the purpose of recovering usable energy (6 NYCRR 364.1(c)).
- *Disposal* - the discharge, deposit, injection, dumping, spilling, leaking or placing of any used oil into or on any land or water so that such used oil or any related constituent thereof may enter the environment or be emitted into the air or discharged into any waters of the state including groundwaters thereof. Disposal shall include the incineration of used oil and the burning of used oil for the purpose of recovering usable energy (Environmental Conservation Law 23-2301) [Added March 2003].
- *Do-It-Yourself Oil Changer* - an individual consumer (noncommercial) who generates used oil by draining the lubricating oil out of his or her own motorized equipment (6 NYCRR 360-14.2).

- *Fuel Oil* - any virgin distillate oil, virgin residual oil, re-refined oil or a blend of these (6 NYCRR 225-2.2).
- *Handbook* - the New York State Water Quality Accident Contingency Plan and Handbook (6 NYCRR 611.3).
- *Lubricating Oil* - all oil suitable for use as a lubricant, or solid for use as a lubricant (6 NYCRR 360-14.2).
- *Major Facility* - includes but is not limited to any refinery, storage or transfer terminal, pipeline, deep water port, drilling platform or any appurtenance related to any of the preceding that is used or is capable of being used to refine, produce, store, handle, transfer, progress or transport petroleum. A vessel shall be considered a major facility only when petroleum is transferred between vessels in the waters of the State of New York. Fueling operations, and the like, between vessels shall not be considered petroleum transfers between vessels for the purpose of this definition. Facilities with total combined above-ground or buried storage capacity of less than 400,000 gal are not major facilities for the purposes of this Part (17 NYCRR 30.2).
- *New Oil* - all oil that has been refined from virgin oil, which may or may not contain additives, but has never been used and does not contain re-refined, reprocessed, or used lubricating oil (6 NYCRR 360-14.2) [Added March 2003; Revised March 2008].
- *On-Premises Oil Changing Operation* - any commercial operation that drains or collects used lubricating oil and replaces it with new or re-refined lubricating oil (6 NYCRR 360-14.2).
- *Petroleum* - any petroleum-based oil of any kind which is liquid at 20 °C under atmospheric pressure and has been refined, re-refined, or otherwise processed for the purpose of being burned as a fuel to produce heat or usable energy, or which is suitable for use as a motor fuel or lubricant in the operation or maintenance of an engine. Waste oil which has been reprocessed or re-refined and which is being stored for sale or use as fuel or lubricant is considered petroleum for purposes of this section (6 NYCRR 612.1).
- *Registered Storage Facility* - one or more stationary tanks, including any associated intra-facility pipelines, fixtures, or other equipment, which have a combined storage capacity of over 1100 gal [~4164 L] of petroleum at the same site. A facility may include ASTs, underground tanks, or a combination of both. Pipelines which enter or leave the site and nonstationary tanks are not part of the facility (6 NYCRR 612.1).
- *Regulated Waste* - a solid waste which is raw sewage, septage, sludge from a sewage or water supply treatment plant, waste oil, or industrial-commercial waste, including hazardous waste (6 NYCRR 364.1(d)(4)).
- *Remote Pump* - any pump separated from the dispenser and which has the discharge line operating under pressure (6 NYCRR 614.14(g)(3)).
- *Reprocessed Oil* - a waste oil from which physical and/or chemical contaminants have been removed so that such oil is suitable for productive sale (6 NYCRR 225-2.2).
- *Reprocessing* - any process, method, or technique, short of re-refining, that removes physical or chemical contaminants from used oil so that such oil can be used productively (6 NYCRR 360-14.2).
- *Rerefined Oil* - any waste oil from which physical and/or chemical contaminants have been removed so that it is substantially equivalent to virgin distillate or virgin residual oil (6 NYCRR 225-2.2).
- *Rerefining* - any process, method, or technique that removes the physical and chemical contaminants from used oil so that such oil is suitable for use as lube stock or fuel oil and, when used by itself or when mixed with new oil or additives, is substantially equivalent or superior to new oil intended for the same purpose, as specified in the American Petroleum Institute's (API) Publication 1509, Engine Service Classification System and Guide to Crankcase Oil Selection (6 NYCRR 360-14.2).

- *Retail Establishment* - every vendor that sells lubricating oil at retail in quantities in excess of one thousand gallons per year (6 NYCRR 374-2.1) [Added March 2003; Citation Revised March 2008].
- *Secondary Containment* - containment that prevents any materials spilled or leaked from reaching the land or water outside the containment area before cleanup occurs (6 NYCRR 612.1).
- *Service Establishment* - any automobile service station, including gas only outlets, or any other retail outlet or boat marina selling at least 500 gal of lubricating oil annually and having an on-premises oil changing operation (6 NYCRR 360-14.2).
- *Spill or Spillage* - any escape of petroleum from the ordinary containers employed in the normal course of storage, transfer, processing, or use. A spill becomes a discharge only when petroleum reaches waters of the State, or lands from which it might flow or drain into said waters (6 NYCRR 611.2).
- *Storage* - the holding of solid waste for a temporary period, at the end of which the solid waste is processed, recovered, disposed of, or stored elsewhere (6 NYCRR 364.1(d)(4)).
- *Tolling Agreement* - a contractual agreement under which used oil is reclaimed and returned by the processor/rerefiner to the generator for use as a lubricant, cutting oil, or coolant (6 NYCRR 360-14.2).
- *Total Halogens* - the total organic and inorganic halides (fluorine, F; chlorine, Cl; bromine, Br; iodine, I), expressed as chloride present in a fuel oil or waste fuel, in parts per million (ppm) by weight (water free basis) (6 NYCRR 225-2.2).
- *Underground Tank* - any tank completely covered with earth or other material. Tanks in subterranean vaults accessible for inspections are considered ASTs for the purpose of this section (6 NYCRR 612.1).
- *Underground Used Oil Tank* - any one or combination of tanks (including underground pipes connected thereto) that is used to contain an accumulation of used oil, and is entirely covered by earth or other material. This term does not include any storage tank situated in an underground area (such as a basement, cellar, mineworking, drift, shaft, or tunnel) if the storage tank is situated upon or above the surface of the floor (6 NYCRR 360-14.2).
- *Used Engine Lubricating Oil* - petroleum-based lubricating oil from internal combustion engines and/or from vehicle transmissions that, through use, has been contaminated by physical or chemical impurities (6 NYCRR 360-14.2).
- *Used Engine Lubricating Oil Retention Facility* - any facility employed to store used engine lubricating oil by a service establishment or other government facility that generates at least 500 gal of used oil annually, or accepts used oil from do-it-yourselfers (6 NYCRR 360-14.2).
- *Used Oil* - any oil that has been refined from crude oil, or any synthetic oil, that has been used; and, as a result of such use, is contaminated by physical or chemical impurities. Used oil is separated into two distinct waste categories based on its chemical characteristics (6 NYCRR 360-14.2):
 1. on-specification used oil - a used oil with properties which do not exceed any of the specification levels found in Appendix 8-2
 2. off-specification used oil - used oil with chemical properties which exceed any of the specification levels listed in Appendix 8-2
 3. used oil containing more than 1000 ppm of total halogens is presumed to be a hazardous waste as listed in 6 NYCRR 371.4 (see HAZARDOUS WASTE MANAGEMENT). Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste
 - a. the rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins if they are processed, through a tolling agreement, to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if they are recycled in any other manner, or disposed

- b. the rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons (CFCs) removed from refrigeration units whose CFCs are destined for reclamation. However, the rebuttable presumption does apply to used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units
 - 4. used oil containing 50 ppm by weight, or greater, of polychlorinated biphenyls (PCBs) is a hazardous waste as defined in 6 NYCRR 371.4(e) (see HAZARDOUS WASTE MANAGEMENT), unless exempted under Parts 370 through 374 and 376 of 6 NYCRR
 - 5. materials defined as used oil under 6 NYCRR 374-2.2 (see HAZARDOUS WASTE MANAGEMENT) are also subject to regulation as used oil.
- *Used Oil* - any oil that has been refined from crude oil, or any synthetic oil, that has been used, and as a result of such use, is contaminated by physical or chemical impurities (6 NYCRR 360-14.2) [Added March 2003; Revised March 2008].
- *Used Oil Processing Facility* - chemical or physical operations designed to produce from used oil, or to make used oil more amenable for production of, fuel oils, lubricants, or other used oil-derived product. Processing includes, but is not limited to, blending used oil with virgin petroleum products, blending used oils to meet the fuel specification, filtration, simple distillation, chemical or physical separation, reprocessing, and rerefining (6 NYCRR 360-14.2):
 1. generators who perform the following activities are not processors provided that the used oil is generated onsite and is not being sent offsite to a burner of on-specification or off-specification used oil fuel:
 - a. filtering, cleaning, or otherwise reconditioning used oil before returning it for reuse by the generator
 - b. separating used oil from wastewater generated onsite to make the wastewater acceptable for discharge or reuse pursuant to section 402 or section 307(b) of the *Clean Water Act* or other applicable Federal or state regulations governing the management or discharge of wastewaters
 - c. using oil mist collectors to remove small droplets of used oil from in-plant air to make plant air suitable for continued recirculation
 - d. draining or otherwise removing used oil from materials containing or otherwise contaminated with used oil in order to remove excessive oil to the extent possible pursuant to 6 NYCRR 374-2.2(a)(3), management of hazardous waste
 - e. filtering, separating, or otherwise reconditioning used oil before burning it in a space heater pursuant to 6 NYCRR 374-2.4(b)(1)(ii)(c)
 2. transporters that conduct incidental processing operations that occur during the normal course of used oil transportation (e.g., settling and water separation), but that are not designed to produce (or make more amenable for production of) used oil derived products, are not processors
 3. burners that conduct incidental processing operations that occur during the normal course of used oil management prior to burning as provided in 6 NYCRR 374-2.4(b)(2) are not processors.
- *Used Oil Storage Facility* - any facility, other than used engine lubricating oil retention facilities located at the point of generation, that stores used oil, including, but not limited to, storage facilities for used oil transfer stations or used oil processing facilities (6 NYCRR 360-14.2).
- *Used Oil Transfer Facility* - any transportation related facility including loading docks, parking area, storage areas, and other areas where shipments of used oil are held for more than 24 h and not longer than 35 days during the normal course of transportation (6 NYCRR 360-14.2).
- *Waste Fuel* - either of the following to be burned singly, together, or in combination with fuel oil (6 NYCRR 225-2.2):
 1. waste fuel A
 2. waste fuel B.
- *Waste Fuel A* - any waste oil, fuel oil, or mixture of these to be burned which contains between 25 and 250 ppm (by weight) lead and which meets the limitations found in Appendix 8-1 and does not contain chemical waste (6 NYCRR 225-2.2).

- *Waste Fuel B* - any fuel to be burned that does not meet the limitations of Appendix 8-1 and/or contains chemical waste (6 NYCRR 225-2.2).
- *Waste Oil* - used and/or reprocessed engine lubricating oil and/or any other used oil, including, but not limited to, fuel oil, engine oil, gear oil, cutting oil, transmission fluid, hydraulic fluid, dielectric fluid, oil storage tank residue, animal oil, and vegetable oil, which has been contaminated by physical or chemical impurities, through use or accident, and has not subsequently been re-refined (6 NYCRR 225-2.2 and 360-14.2).

Appendix 8-1

Fuel Constituents/Property

(Source: 6 NYCRR 225-2.4, Table 2-1)

| Constituent/Property | Allowable |
|---|---|
| Polychlorinated Biphenyls (PCB) Total Halogens Lead Gross Heat Content | Less than 50 ppm 1000ppm maximum 250 ppm maximum 125,000 Btu/gal minimum |

Appendix 8-2

Specification Levels Which Apply Only to Used Oil When Burned for Energy Recovery (Source: 6 NYCRR 360-14.2)

| Property | Specification Level |
|----------------|---------------------|
| Arsenic | 5 ppm maximum |
| Cadmium | 2 ppm maximum |
| Chromium | 10 ppm maximum |
| Lead | 100 ppm maximum |
| PCB | 2 ppm maximum |
| Total Halogens | 4000 ppm maximum |
| Flash Point | 100 °F minimum |

Appendix 8-3

Applicability of Standards for the Management of Used Oil

(Source: 6 NYCRR 374-2.2) [Added March 2010]

This subdivision identifies those materials which are subject to regulation as used oil under this Subpart and Subpart 360-14 of this Title. This subdivision also identifies some materials that are not subject to regulation as used oil under this Subpart, and indicates whether these materials may be subject to regulation as hazardous waste under Parts 370 through 374-1, 374-3, and 376 of this Title.

The storage in tanks of materials which are not subject to regulation as hazardous waste and which are identified in this section as petroleum product, used oil fuels, or as fuels or lubricants derived, re-refined, or re-processed from used oil, may be subject to the requirements and standards of Parts 612, 613, and 614 of this Title.

In addition to the requirements of this Subpart, used oil generators, collection centers, DIY collection centers, aggregation points, transporters, transfer, storage, re-refining or processing facilities, burners and marketers must meet all applicable requirements of Parts 201, 225, 364, and Subparts 360- 1 and 360-14 of this Title that are broader in scope or more stringent than the requirements of this Subpart.

(1) Used oil. The department presumes that used oil is to be recycled or burned for energy recovery unless a used oil handler disposes of used oil, or sends used oil for disposal. Except as provided in subdivision 374-2.2(b) of this section, the regulations of this Subpart apply to used oil and to materials identified in this subdivision as being subject to regulation as used oil, whether or not the used oil or material exhibits any characteristics of hazardous waste identified in section 371.3 of this Title.

(2) Mixtures of used oil and hazardous waste.

(i) Listed hazardous waste.

(a) Mixtures of hazardous waste, listed in section 371.4 of this Title, and of used oil are subject to regulation as hazardous waste under Parts 370 through 374-1, 374-3, and 376 of this Title, rather than as used oil under this Subpart.

(b) Rebuttable presumption for used oil. Used oil containing more than 1,000 ppm total halogens is presumed to be a hazardous waste because it has been mixed with halogenated hazardous waste listed in section 371.4 of this Title. Persons may rebut this presumption by demonstrating that the used oil does not contain hazardous waste (for example, by using an analytical method from SW-846, as incorporated by reference in paragraph 370.1(e)(8) of this Title, to show that the used oil does not contain significant concentrations of halogenated hazardous constituents listed in Appendix 23 of this Title).

(1) Laboratory analyses completed for purposes of rebuttable presumption must be performed by a laboratory currently certified under the appropriate approval categories by the New York State Department of Health's Environmental Laboratory Approval Program (ELAP).

(2) The rebuttable presumption does not apply to metalworking oils/fluids containing chlorinated paraffins, if they are processed, through a tolling arrangement, as described in paragraph 374-2.3(e)(3) of this Subpart, to reclaim metalworking oils/fluids. The presumption does apply to metalworking oils/fluids if such oils/fluids are recycled in any other manner, or disposed.

(3) The rebuttable presumption does not apply to used oils contaminated with chlorofluorocarbons (CFCs) removed from refrigeration units where the CFCs are destined for reclamation. The rebuttable presumption does apply to used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units.

(ii) Characteristic hazardous waste. Mixtures of used oil and of hazardous waste that solely exhibits one or more of the hazardous waste characteristics identified in section 371.3 of this Title, and mixtures of used oil and of hazardous waste that is listed in section 371.4 of this Title solely because it exhibits one or more of the characteristics of hazardous waste identified in section 371.3 of this Title are subject to:

(a) except as provided in clause (2)(ii)(c) of this subdivision, regulation as hazardous waste under Parts 370 through 374-1, 374-3, and 376 of this Title rather than as used oil under this Subpart, if the resultant mixture exhibits any characteristics of hazardous waste identified in section 371.3 of this Title; or

- (b) except as specified in clause (2)(ii)(c) of this subdivision, regulation as used oil under this Subpart, if the resultant mixture does not exhibit any characteristics of hazardous waste identified under section 371.3 of this Title.
 - (c) regulation as used oil under this Subpart, if the mixture is of used oil and a waste which is hazardous solely because it exhibits the characteristic of ignitability (e.g., ignitable-only mineral spirits), provided that the resultant mixture does not exhibit the characteristic of ignitability under subdivision 371.3(b) of this Title.
- (iii) Conditionally exempt small quantity generator hazardous waste. Mixtures of used oil and conditionally exempt small quantity generator hazardous waste regulated under paragraph 371.1(f)(10) of this Title are subject to regulation as used oil under this Subpart.
- (3) Materials containing or otherwise contaminated with used oil.
- (i) Except as provided in subparagraph (3)(ii) of this paragraph, materials containing or otherwise contaminated with used oil from which the used oil has been properly drained or removed to the extent possible such that no visible signs of free-flowing oil remain in or on the material:
 - (a) are not used oil and thus not subject to this Subpart; and
 - (b) if applicable are subject to the hazardous waste regulations of Parts 370 through 374-1, 374-3, and 376 of this Title.
 - (ii) Materials containing or otherwise contaminated with used oil that are burned for energy recovery are subject to regulation as used oil under this Subpart.
 - (iii) Used oil drained or removed from materials containing or otherwise contaminated with used oil is subject to regulation as used oil under this Subpart.
- (4) Mixtures of used oil with products.
- (i) Except as provided in subparagraph (4)(ii) of this paragraph, mixtures of used oil and fuels or other fuel products are subject to regulation as used oil under this Subpart.
 - (ii) Mixtures of used oil and diesel fuel mixed on-site by the generator of the used oil for use in the generator's own vehicles are not subject to this Subpart once the used oil and diesel fuel have been mixed. Prior to mixing, the used oil is subject to the requirements of section 374-2.3 of this Subpart.
- (5) Materials derived from used oil.
- (i) Materials that are reclaimed from used oil that are used beneficially and are not burned for energy recovery or used in a manner constituting disposal (e.g., re-refined lubricants) are:
 - (a) not used oil and thus are not subject to this Subpart; and
 - (b) not solid wastes and are thus not subject to the hazardous waste regulations of Parts 370 through 374-1, 374-3, and 376 of this Title as provided in clause 371.1(d)(3)(ii)(a) of this Title.
 - (ii) Materials produced from used oil that are burned for energy recovery (e.g., used oil fuels) are subject to regulation as used oil under this Subpart and Part 225 of this Title.
 - (iii) Except as provided in subparagraph (5)(iv) of this paragraph, materials derived from used oil that are disposed of or used in a manner constituting disposal are:
 - (a) not used oil and thus are not subject to this Subpart; and
 - (b) are solid wastes regulated under Part 360 of this Title, unless they are subject to the hazardous waste regulations of Parts 370 through 374-1, 374-3, and 376 of this Title if the materials are listed or identified as hazardous waste.
 - (iv) Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products are not subject to this Subpart.
- (6) Wastewater. Wastewater, the discharge of which is subject to regulation under either Section 402 or Section 307(b) of the Federal Clean Water Act, as incorporated by reference in subdivision 370.1(e) of this Title (including wastewaters at facilities which have eliminated the discharge of wastewater), contaminated with "de minimis" quantities of used oil are not subject to the requirements of this Subpart. For purposes of this paragraph, "de minimis" quantities of used oils are defined as small spills, leaks, or drippings from pumps, machinery, pipes, and other similar equipment during normal operations or small amounts of oil lost to the wastewater treatment system during washing or draining operations. This exception will not apply if the used oil is discarded as a result of abnormal manufacturing operations resulting in substantial leaks, spills, or other releases, or to used oil recovered from wastewaters.

- (7) Used oil introduced into crude oil pipelines or a petroleum refining facility.
- (i) Used oil mixed with crude oil or natural gas liquids (e.g., in a production separator or crude oil stock tank) for insertion into a crude oil pipeline is exempt from the requirements of this Subpart. The used oil is subject to the requirements of this Subpart prior to the mixing of used oil with crude oil or natural gas liquids.
 - (ii) Mixtures of used oil and crude oil or natural gas liquids containing less than one percent used oil that are being stored or transported to a crude oil pipeline or petroleum refining facility for insertion into the refining process at a point prior to crude distillation or catalytic cracking are exempt from the requirements of this Subpart.
 - (iii) Used oil that is inserted into the petroleum refining facility process before crude distillation or catalytic cracking without prior mixing with crude oil is exempt from the requirements of this Subpart provided that the used oil constitutes less than one percent of the crude oil feed to any petroleum refining facility process unit at any given time. Prior to insertion into the petroleum refining facility process, the used oil is subject to the requirements of this Subpart.
 - (iv) Except as provided in subparagraph (7)(v) of this paragraph, used oil that is introduced into a petroleum refining facility process after crude distillation or catalytic cracking is exempt from the requirements of this Subpart only if the used oil meets the specifications of paragraph 374- 2.2(b)(1) of this section. Prior to insertion into the petroleum refining facility process, the used oil is subject to the requirements of this Subpart.
 - (v) Used oil that is incidentally captured by a hydrocarbon recovery system or wastewater treatment system as part of routine process operations at a petroleum refining facility and inserted into the petroleum refining facility process is exempt from the requirements of this Subpart. This exemption does not extend to used oil which is intentionally introduced into a hydrocarbon recovery system (e.g., by pouring collected used oil into the wastewater treatment system).
 - (vi) Tank bottoms from stock tanks containing exempt mixtures of used oil and crude oil or natural gas liquids are exempt from the requirements of this Subpart.
- (8) Used oil on vessels. Used oil produced on vessels from normal shipboard operations is not subject to this Subpart until it is transported ashore.
- (9) Used oil containing PCBs. Used oil containing 50 ppm by weight, or greater, of polychlorinated biphenyls (PCBs) is a hazardous waste as defined in subdivision 371.4(e) of this Title. In addition to the requirements of this Subpart, used oil containing any quantifiable level of PCBs may be subject to the requirements found in 40 CFR 761.20(e), as incorporated by reference in subdivision 370.1(e) of this Title.

SECTION 9

SOLID WASTE MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Solid Waste Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Active Life* - that period of time during which solid waste is or will be routinely and regularly received. In the case of landfills, active life ends at the completion of closure activities (6 NYCRR 360-1.2).
- *Asbestos Waste* - friable solid waste that contains more than 1 percent asbestos by weight and can be crumbled, pulverized, or reduced to powder, when dry, by hand pressure. Asbestos waste also includes any asbestos-containing solid waste that is collected in a pollution control device designed to remove asbestos (6 NYCRR 360-1.2).
- *Ash Residue* - all the solid residue and any entrained liquids resulting from the combustion of solid waste or solid waste in combination with fossil fuel at a solid waste incinerator, including bottom ash, boiler ash, fly ash, and the solid residue of any air pollution control device used at a solid waste incinerator (6 NYCRR 360-1.2).
- *Bottom Ash* - the ash residue remaining after combustion of solid waste or solid waste in combination with fossil fuel in a solid waste incinerator that is discharged through and from the grates, combustor, or stoker (6 NYCRR 360-1.2).
- *Bypass Waste* - any solid waste that is either within the control of the operator of a solid waste incinerator or refuse-derived fuel processing facility or pyrolysis facility, or within the control of another person, that is destined for treatment at the facility but cannot be so treated, and includes either (6 NYCRR 360-1.2):
 1. downtime waste - any treatable or burnable solid waste accumulated during a scheduled or unscheduled maintenance period of the facility
 2. excess waste, meaning solid waste that cannot be treated because the facility is operating at the approved design capacity.
- *Certification* - a statement of professional opinion based upon investigation, analysis, knowledge, and belief that is stated to be true and accurate (6 NYCRR 360-1.2).
- *Clean Fill* - material consisting of concrete, steel, wood, sand, dirt, soil, glass, construction and demolition debris, and other recognizable inert material designated by the Department (6 NYCRR 360-8.2).
- *Coal Combustion* - the combustion of coal or the combustion of coal along with Departmental-approved alternate fuels, such as tires, at an energy generation facility provided that alternate fuels comprise no greater than 30 percent of the fuel burned at the facility (6 NYCRR 360-1.2).
- *Coefficient of Permeability and Hydraulic Conductivity* - the rate of laminar flow of water through a unit cross-sectional area of a porous medium of bottom ash and fly ash (6 NYCRR 360-1.2).
- *Combustion* - the thermal treatment of solid waste in a device which uses elevated temperatures as the primary means to change the chemical, physical, or biological character or composition of the waste. Examples of combustion processes include incineration, pyrolysis, and fluidized bed (6 NYCRR 360-1.2).

- *Commercial Waste* - solid waste generated by stores, offices, restaurants, warehouses, and nonmanufacturing activities at industrial facilities (6 NYCRR 360-1.2).
- *Commissioner* - the Commissioner of Environmental Conservation or his duly designated representative (6 NYCRR 360-1.2).
- *Composting Facility* - a solid waste management facility used to provide aerobic, thermophilic decomposition of solid organic constituents of solid waste to produce a stable, humus-like material (6 NYCRR 360-1.2).
- *Construction* - any physical modification to the site at which an existing or proposed solid waste management facility is or will be located, including, but not limited to, site preparation (e.g., clearing and grading, excavation of borrow material for daily cover, etc.) (6 NYCRR 360-1.2).
- *Construction and Demolition Debris (C&D Debris)* - uncontaminated solid waste resulting from the construction, remodeling, repair, and demolition of utilities, structures, and roads; and uncontaminated solid waste resulting from land clearing. Such waste includes, but is not limited to, bricks, concrete and other masonry materials, soil, rock, wood (including painted, treated, and coated wood and wood products), land clearing debris, wall coverings, plaster, drywall, plumbing, fixtures, nonasbestos insulation, roofing shingles and other roof coverings, asphaltic pavement, glass, plastics that are not sealed in a manner that conceals other wastes, empty buckets 10 gal or less in size and having no more than 1 in. of residue remaining on the bottom, electrical wiring and components containing no hazardous liquids, and pipe and metals that are incidental to any of the above. Solid waste that is not C&D debris (even if resulting from the construction, remodeling, repair, and demolition of utilities, structures, and roads and land clearing), includes, but is not limited to, asbestos waste, garbage, corrugated container board, electrical fixtures containing hazardous liquids such as fluorescent light ballasts or transformers, fluorescent lights, carpeting, furniture, appliances, tires, drums, containers greater than 10 gal in size, any containers having more than 1 in. of residue remaining on the bottom, and fuel tanks. Specifically excluded from the definition of C&D debris is solid waste (including what otherwise would be C&D debris) resulting from any processing technique, other than that employed at a Department-approved C&D debris processing facility, that renders individual waste components unrecognizable, such as pulverizing or shredding. Also, waste contained in an illegal disposal site may be considered C&D debris if the Department determines that such waste is similar in nature and content to C&D debris (6 NYCRR 360-1.2).
- *Construction and Demolition Debris Processing Facility* - a processing facility that receives and processes construction and demolition debris by any means (6 NYCRR 360-1.2).
- *Construction Certification Report* - a report submitted to the Department upon completion of the construction of a solid waste management facility that includes the resulting information prepared in accordance with the requirements of this section (6 NYCRR 360-1.2).
- *Container* - any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled (6 NYCRR 360-1.2).
- *Contingency Plan* - a document describing organized, planned, and technically coordinated and financially feasible courses of action to be followed in case of emergency or other special conditions including, but not limited to, equipment breakdowns, fire, odor, vectors, explosion, spills, receipt, or release of hazardous or toxic materials or substances, groundwater, surface water, or air contamination attributable to a solid waste management facility and other incidents that could threaten human health or safety or the environment (6 NYCRR 360-1.2).
- *Cover Material* - soil or other suitable material, or a combination of same, acceptable to the Department that is used to cover compacted solid waste in a landfill (6 NYCRR 360-1.2).
- *Daily Cover* - a compacted layer of at least 6 in. of cover material, unless otherwise approved by the Department that is placed on all exposed solid waste at the end of each working day of operation at a landfill (6 NYCRR 360-1.2).

- *Department* - the New York State Department of Environmental Conservation (6 NYCRR 360-1.2).
- *Dike* - an embankment or ridge of either natural or synthetic materials used to prevent, control, or confine the movement of liquids or solids (6 NYCRR 360-1.2).
- *Discarded* - a material is discarded if it is abandoned by being (6 NYCRR 360-1.2):
 1. disposed of
 2. burned or incinerated, including being burned as a fuel for the purpose of recovering usable energy
 3. accumulated, stored, or physically, chemically, or biologically treated (other than burned or incinerated) instead of or before being disposed of.
- *Discharge* - the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of any solid waste, or solid waste constituent, including leachate, into or on any air, land, or water (6 NYCRR 360-1.2).
- *Disposal* - the abandonment, discharge, deposit, injection, dumping, spilling, leaking or placing of any waste or hazardous waste on or into any lands or waters of the State so that such waste or hazardous waste or any related constituent thereof may enter the environment or be emitted into the air or be discharged into any waters, including ground waters thereof. Disposal also means the thermal destruction of waste or hazardous waste and the burning of such wastes as fuel for the purpose of recovering usable energy (6 NYCRR 364.1).
- *Disposal Facility* - a solid waste management facility or part of one in or on which solid waste is intentionally placed, including any land or water, and at which solid waste will remain after closure (6 NYCRR 360-1.2).
- *Disposed* - a material is disposed of if it is discharged, deposited, injected, dumped, spilled, leaked, or placed into or on any land or water so that such material or any constituent thereof may enter the environment or be emitted into the air, or discharged into groundwater or surface water (6 NYCRR 360-1.2).
- *Domestic Sewage* - water-carried human and animal wastes from residences, buildings, industrial establishments, or other places, together with such groundwater infiltration and surface waste as may be present (6 NYCRR 360-1.2).
- *ECL and Environmental Conservation Law* - chapter 43-B of the Consolidated Laws of New York State (6 NYCRR 364.1).
- *Empty* - wastes have been removed using the practices commonly employed to remove materials from that type of container so that no more than one inch (2.5 centimeters [cm]) of residue remains on the bottom of the container; or in the case of compressed gas, when the pressure in the container approaches atmospheric (6 NYCRR 364.1).
- *Energy Recovery* - the treatment by which energy is extracted and marketed from solid waste in excess of that required to operate the facility (6 NYCRR 360-1.2).
- *EPA* - the United States Environmental Protection Agency (6 NYCRR 364.1).
- *Existing Landfill* - (with respect to Long Island landfills) a landfill that was in operation of 18 December 1983. The lateral limit of an existing landfill is set forth in the permit or consent order in effect on that date or by the limits, projected on a horizontal plane, of the actual solid waste in place on 18 December 1983 (6 NYCRR 360-8.2).
- *Expansion* - (with respect to Long Island landfills) a lateral expansion beyond the lateral limits of an existing landfill (6 NYCRR 360-8.2).

- *Facility Monitoring Points* - designated locations for sampling leachate or other media within the containment system of a solid waste management facility (6 NYCRR 360-1.2).
- *Farm* - the raising or harvesting of any agricultural or horticultural commodity through the cultivation of the soil, aquacultural product, or the raising, shearing, feeding, caring for, training, or management of livestock, bees, poultry, furbearing animals, fish, domestic animals, or wildlife (6 NYCRR 360-1.2).
- *Final Cover System* - an engineered layer of materials approved by the Department that is placed on any surface of a landfill where no additional solid waste will be deposited within 1 yr and serves to restrict infiltration, support, vegetation, control landfill gas, and promote surface drainage (6 NYCRR 360-1.2).
- *Flood Plain* - the land susceptible to being inundated by a flood that has a 1 percent or greater chance of recurring in any given year (or 100-yr flood plain) (6 NYCRR 360-1.2).
- *Fly Ash* - the ash residue from the combustion of solid waste or solid waste in combination with fossil fuel that is entrained in the gas stream of the solid waste incinerator and removed by the air pollution control equipment (6 NYCRR 360-1.2).
- *Free Liquids* - liquids which readily separate from the solid portion of a solid waste under ambient temperature and pressure (6 NYCRR 360-1.2).
- *Freeboard* - the vertical distance between the lowest elevation of the top of a tank, surface impoundment, or dike, and the highest level of the surface of the solid waste contained therein (6 NYCRR 360-1.2).
- *Garbage* - putrescible solid waste including animal and vegetable waste resulting from the handling, storage, sale, preparation, cooking, or serving of foods. Garbage originates primarily in home kitchens, stores, markets, restaurants, and other places where food is stored, prepared, or served (6 NYCRR 360-1.2).
- *Generator* - any person, by site, whose act or process produces solid waste or whose act first causes a solid waste to become subject to regulation (6 NYCRR 364.1).
- *Geocomposite* - a manufactured material using geotextiles, geogrids, geomembranes, or combinations of same in a laminated or composite form (6 NYCRR 360-1.2).
- *Geogrid* - a deformed or nondeformed netlike polymeric material used with foundation, soil, rock, earth, or any other geotechnical engineering-related material as an integral part of the structure or system to provide reinforcement to soil slopes (6 NYCRR 360-1.2).
- *Geomembrane* - an essentially impermeable membrane used with foundation, soil, rock, earth, or any other geotechnical engineering-related material as an integral part of a structure or system designed to limit the movement of liquid or gas in the system (6 NYCRR 360-1.2).
- *Geosynthetic* - the generic classification of all synthetic materials used in geotechnical engineering applications, including geotextiles, geogrids, geomembranes, and geocomposites (6 NYCRR 360-1.2).
- *Geotextile* - any permeable textile used with foundations, soil, rock, earth, or any other geotechnical engineering-related material as an integral part of a structure or system designed to act as a filter to prevent the flow of soil fines into drainage systems, to provide planar flow for drainage, or to serve as a cushion to protect geomembranes or to provide structural support (6 NYCRR 360-1.2).
- *Groundwater* - water below the land surface in a saturated zone of soil or rock. This includes perched water separated from the main body of groundwater by an unsaturated zone (6 NYCRR 360-1.2).
- *Household Hazardous Waste* - household waste which but for its point of generation, would be a hazardous waste under 6 NYCRR 371, including pesticides as defined in ECL, article 33 (6 NYCRR 360-1.2).

- *Household Medical Waste* - household solid waste which, but for its point of generation, would be a regulated medical waste (6 NYCRR 360-1.2).
- *Household Waste* - solid waste discarded from single or multiple dwellings, hotels, motels, campsites, public and private recreation areas, ranger stations, and other residential sources (6 NYCRR 360-1.2).
- *Incinerator* - an enclosed device using controlled flame combustion to thermally break down solid waste, including refuse-derived fuel, to an ash residue that contains little or no combustible materials (6 NYCRR 360-1.2).
- *Industrial-Commercial Waste* - any solid waste which originates at, is generated by, or occurs as a result of any industrial or commercial activity. Industrial-commercial wastes are exemplified by, but not limited to (6 NYCRR 364.1):
 1. liquids such as:
 - a. acids, alkalis, caustics, leachate, petroleum (and its derivatives), and processes or treatment wastewaters;
 - b. sludges, which semi-solid substances are resulting from process or treatment operations or residues from storage or use of liquids;
 2. solids such as:
 - a. solidified chemicals, paints or pigments;
 - b. dredge spoil, foundry sand, and the end or by-products of incineration or other forms of combustion, including bottom ash and fly ash;
 3. contained gaseous materials
 4. hazardous waste
 5. any liquid, sludge, septage, solid, semi-solid substance or contained gaseous material in which any of the foregoing is intermixed or absorbed, or onto which any of the foregoing is adhered.
- *Industrial Waste* - solid waste generated by manufacturing or industrial processes. Such processes may include, but are not limited to, the following: electric power generation; fertilizer/agricultural chemicals; inorganic chemicals; iron and steel manufacturing; leather and leather products; nonferrous metals manufacturing/foundries; organic chemicals; plastics and resins manufacturing; pulp and paper industry; rubber and miscellaneous plastic products; stone, glass, clay, and concrete products; textile manufacturing; transportation equipment; and water treatment. The forms of such wastes are exemplified by, but not limited to: liquids such as acids, alkalis, caustics, leachate, petroleum (and its derivatives), and processes or treatment wastewaters; sludges which are semisolid substances resulting from process or treatment operations or residues from storage or use of liquids; solidified chemicals, paints, or pigments; and dredge spoil, foundry sand, and the end or byproducts of incineration or other forms of combustion. This term does not include oil or gas drilling, production, and treatment wastes (such as brines, oil, and frac fluids); overburden, spoil, or tailings resulting from mining; or solution mining brine and insoluble component wastes (6 NYCRR 360-1.2).
- *Inert Material* - material that contains neither leachate constituents at concentrations in excess of groundwater quality standards contained in Part 703 of this Title nor putrescible material (6 NYCRR 360-8.2).
- *Land Application Facility* - a site where solid waste is applied to the soil surface or injected into the upper layer of the soil to improve soil quality or provide plant nutrients. Solid waste suitable for this purpose includes, but is not limited to, certain food processing waste, sewage treatment plant sludge, and septage (6 NYCRR 360-1.2).
- *Land Clearing Debris* - vegetative matter, soil, and rock resulting from activities such as land clearing and grubbing, utility line maintenance, or seasonal or storm-related cleanup such as trees, stumps, brush, and leaves and including wood chips generated from these materials. Land clearing debris does not include yard waste which has been collected at the curbside (6 NYCRR 360-1.2).

- *Landfill* - land or a disposal facility or part of one where solid waste or its residue after treatment is intentionally placed and which is not a land application facility, surface impoundment, injection well, or waste pile (6 NYCRR 360-1.2).
- *Landspreading Facility* - a site where sludge or septage is applied to the soil surface or injected into the upper layer of the soil to improve soil quality or to provide plant nutrients. Sludges suitable for these purposes include food processing waste, winery waste, brewery waste, cannery waste and sewage treatment plant sludge (6 NYCRR 364.1).
- *Leachate* - any solid waste in the form of a liquid, including any suspended components in the liquid that results from contact with or passage through solid waste (6 NYCRR 360-1.2).
- *Lower Explosive Limit (LEL)* - the lowest percentage by volume of a mixture of explosive gases which will propagate a flame in air at 25 °C and atmospheric pressure (6 NYCRR 360-1.2).
- *Low Level Radioactive Waste (LLRW)* - radioactive material that is not high-level radioactive waste, transuranic waste, spent nuclear fuel, or the tailings or wastes produced by the extraction or concentration of uranium or thorium from any ore processed primarily for its source material content (6 NYCRR 364.1).
- *New Landfill* - (with respect to Long Island landfills) a landfill other than an existing landfill or an expansion (6 NYCRR 360-8.2).
- *Person* - any individual, public or private corporation, political subdivision, government agency, department or bureau of the State or Federal government, municipality, industry, copartnership, association, firm, trust, estate or any other legal entity (6 NYCRR 364.1).
- *Point Source* - any discernible, confined, and discrete conveyance from which pollutants are or may be discharged. Sources of discharge include, but are not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation or vessel or other floating craft. This term does not include return flow from irrigated lands (6 NYCRR 360-1.2).
- *Processing Facility* - a combination of structure, machinery, or devices, other than collection and transfer vehicles, utilized to reduce or alter the volume or the chemical or physical characteristics of solid waste through processes such as, but not limited to, separating, crushing, screening, baling, or shredding before its delivery to any solid waste management facility (6 NYCRR 360-1.2).
- *Product of Resource Recovery, Incineration, or Composting* - ash residue, noncombustible residue from a recyclables handling and recovery facility, untreatable waste residue from a composting facility, and compost (6 NYCRR 360-8.2).
- *Publicly Owned Treatment Works* - any device or system used in the treatment (including recycling and reclamation) of municipal sewage or industrial wastes of a liquid nature that is owned by a state or municipality (as defined in section 502(4) of the Federal Water Pollution Control Act, as amended). This definition includes sewers, pipes, or other conveyances only if they convey wastewater to a publicly owned treatment works providing treatment (6 NYCRR 360-1.2).
- *Putrescible* - the tendency of organic matter to decompose with the formation of malodorous byproducts. For the purpose of this section, wood is not considered to be putrescible (6 NYCRR 360-1.2).
- *Putrescible Waste* - solid waste that contains organic matter capable of being decomposed by microorganisms and of such a character and proportion as to be capable of attracting or providing food for disease vectors (6 NYCRR 360-1.2).

- *Pyrolysis* - a process using applied heat in an oxygen-deficient or oxygen-free environment for chemical decomposition of solid waste. Any byproducts or residues of pyrolysis are not considered refuse-derived fuel (6 NYCRR 360-3.2).
- *Raw Sewage* - any untreated sanitary waste (6 NYCRR 364.1).
- *Recover* - any act or process by which recyclables or reusables are separated from the solid waste stream (6 NYCRR 360-1.2).
- *Recycle* - to use recyclables in manufacturing a product (6 NYCRR 360-1.2).
- *Recyclable* - solid waste that exhibits the potential to be used repeatedly (6 NYCRR 360-1.2).
- *Recyclables Handling and Recovery Facility* - a solid waste processing facility, other than collection and transfer vehicles, at which nonputrescible recyclables are separated from the solid waste stream or at which previously separated nonputrescible recyclables are separated from the solid waste stream or at which previously separated nonputrescible recyclables are processed (6 NYCRR 360-1.2).
- *Re-fined oil* - any waste oil from which physical and/or chemical contaminants have been removed so that it is substantially equivalent to virgin distillate or virgin residual oil (6 NYCRR 364.1).
- *Refuse* - anything putrescible or nonputrescible that is discarded or rejected as useless or worthless (6 NYCRR 360-1.2).
- *Refuse-Derived Fuel* - treated solid waste that is used as a fuel. Off-products of pyrolysis are not considered refuse-derived fuel (6 NYCRR 360-1.2).
- *Refuse-Derived Fuel Processing Facility* - the combination of structures, machinery, or devices utilized to reduce or alter the volume of mixed solid waste before delivery to a solid waste incinerator or pyrolysis facility (6 NYCRR 360-1.2).
- *Regulated Medical Waste (RMW)* - any medical waste that is a solid waste generated in the diagnosis, treatment (e.g., provision of medical services), or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals, that is not excluded or exempted (see Appendix 8-1) and that is listed below (6 NYCRR 360-17.2):
 1. cultures and stocks of infectious agents and associated biologicals, including: cultures from medical and pathological laboratories; cultures and stocks of infectious agents from research and industrial laboratories; wastes from the production of biologicals; discarded live and attenuated vaccines; and culture dishes and devices used to transfer, inoculate, and mix cultures
 2. human pathological wastes, including tissues, organs, body parts and body fluids that are removed during surgery or autopsy, or other medical procedures, and specimens of body fluids and their containers
 3. liquid waste human blood, products of human blood, items saturated and/or dripping with human blood, or items that were saturated and/or dripping with human blood that are now caked with dried human blood, including serum, plasma, and other blood components, and their containers, which were used or intended for use in either patient care, testing and laboratory analysis or the development of pharmaceuticals. Intravenous bags are also included in this category
 4. sharps that have been used in animal or human patient care or treatment or in medical, research, or industrial laboratories, including hypodermic needles, syringes (with or without the attached needle), Pasteur pipettes, scalpel blades, blood vials, needles with attached tubing, culture dishes (regardless of presence of infectious agents). Also included are other types of broken or unbroken glassware that were in contact with infectious agents, such as used slides and cover slips
 5. contaminated animal carcasses, body parts, and bedding of animals that were known to have been exposed to infectious agents during research (including research in veterinary hospitals), production of biologicals, or testing of pharmaceuticals

6. wastes from surgery or autopsy that were in contact with infectious agents, including soiled dressings, sponges, drapes, lavage tubes, drainage sets, underpads, and surgical gloves
 7. laboratory wastes from medical, pathological, pharmaceutical, or other research, commercial, or industrial laboratories that were in contact with infectious agents, including slides and cover slips, disposable gloves, laboratory coats, and aprons
 8. dialysis wastes that were in contact with the blood of patients undergoing hemodialysis or renal dialysis, including contaminated disposable equipment and supplies such as tubing, filters, disposable sheets, towels, gloves, aprons, and laboratory coats
 9. biological waste and discarded materials contaminated with blood, excretion, exudates, or secretion from humans who are isolated to protect others from certain highly communicable diseases, or isolated animals known to be infected with highly communicable diseases
 10. the following unused, discarded sharps: hypodermic needles, suture needles, syringes, and scalpel blades.
- *Regulated Waste* - a solid waste which is raw sewage, septage, sludge, from a sewage or water supply treatment plant, waste oil or industrial-commercial waste, including hazardous waste (6 NYCRR 364.1).
 - *Regulated Wetland* - a wetland area regulated pursuant to the ECL, article 24 (Freshwater Wetlands) or ECL, article 25 (Tidal Wetlands) (6 NYCRR 360-1.2).
 - *Residue* - all solid waste remaining after treatment and includes, but is not limited to, ash residue and other solid waste that is not recovered or combusted (6 NYCRR 360-1.2).
 - *Resource Recovery Facility* - a combination of structures, machinery, or devices utilized to separate, process, modify, convert, treat, or prepare collected solid waste so that component materials or substances or recoverable resources may be recovered or used as a raw material or energy source (6 NYCRR 360-1.2).
 - *Salvage Area* - a controlled, segregated area at a solid waste management facility where the facility owner or operator authorizes salvaging (6 NYCRR 360-1.2).
 - *Salvaging* - the incidental removal of solid waste for reuse under the control of the facility owner or operator (6 NYCRR 360-1.2).
 - *Saturated Zone* - that part of the earth's crust in which the interconnected voids are completely filled with water at a pressure equal to or greater than atmospheric pressure. The interface between the saturated zone and the unsaturated zone is the groundwater table (6 NYCRR 360-1.2).
 - *Septage* - the contents of a septic tank, cesspool, or other individual sewage treatment facility that receives domestic sewage wastes (6 NYCRR 360-1.2) (6 NYCRR 364.1).
 - *Sewage Sludge* - the accumulated semisolids or solids resulting from treatment of wastewaters from publicly or privately owned or operated sewage treatment plants. Sewage sludge does not include grit or screenings or ash generated during the incineration of sewage sludge (6 NYCRR 360-1.2).
 - *Sludge* - any solid, semisolid, or liquid waste generated from a wastewater treatment plant, water supply treatment plant, or air pollution control facility but does not include the treated effluent from a wastewater treatment plant (6 NYCRR 360-1.2) (6 NYCRR 364.1).
 - *Solid Waste* - any garbage, refuse, sludge from a wastewater treatment plant, water supply treatment plant, or air pollution control facility, and other discarded materials including solid, liquid, semisolid, or contained gaseous material, resulting from industrial, commercial, mining, and agricultural operations, and from community activities, but does not include solid or dissolved materials in domestic sewage, or solid or dissolved materials in irrigation return flows or industrial discharges that are point sources subject to permit under 33 U.S. Code (USC) 1342, as amended (86 Statute 880), or source, special nuclear, or byproduct material as defined by the *Atomic Energy Act* of 1954, as amended (68 Statute 923) except as may be provided by existing agreements

between the State of New York and the government of the United States (see section 360-1.3 of 6 NYCRR (6 NYCRR 360-1.2)).

- *Solid Waste* - any garbage, refuse, sludge or any solid, liquid, semi-solid or contained gaseous material, resulting from industrial, commercial, mining, agricultural, community or other activities, not excluded below, which is discarded, disposed or, burned or incinerated, including being burned as a fuel for the purpose of recovering usable energy, or is being accumulated, stored, or physically, chemically, or biologically treated in lieu of or prior to being disposed of, burned or incinerated, or which has served its original intended use and is sometimes discarded, or is a manufacturing or mining by-product and sometimes is discarded. The following materials are not solid wastes for the purposes of this Part (6 NYCRR 364.1):
 1. domestic sewage and any mixture of domestic sewage and other wastes that passes through a sewer system to a publicly owned treatment works for treatment (domestic sewage means untreated sanitary wastes that pass through a sewer system);
 2. industrial wastewater discharges that are point source discharges for which a permit has been issued pursuant to article 17 of the Environmental Conservation Law;
(NOTE: This exclusion applies only to the actual point source discharge. The exclusion does not apply to industrial wastewater while they are being collected, stored or treated before discharge, nor does it apply to sludges that are generated by industrial wastewater treatment.)
 3. irrigation return flows;
 4. radioactive materials which are source, special nuclear, or by-product material. For purposes of this Part: Source material means uranium and/or thorium, or ores containing by weight 0.05 percent or more of uranium and/or thorium; special nuclear material means plutonium, uranium 233, uranium enriched in uranium 233 or uranium 235, or any material artificially enriched by any of these; and by-product material means radioactive material yielded in or made radioactive by exposure to radiation incident to the process by producing or utilizing special nuclear materials, tailings or waste produced by the extrication or concentration of uranium or thorium from any ore processed primarily for its source material content; and
 5. materials subject to in-site mining techniques which are not removed from the ground as part of the extraction process.
- *Solid Waste Incinerator* - an incinerator combusting solid waste or solid waste in combination with fossil fuel with or without energy recovery (6 NYCRR 360-1.2).
- *Solid Waste Management Facility* - any facility employed beyond the initial solid waste collection process and managing solid waste, including, but not limited to the following:
 1. transfer stations
 2. rail-haul or barge-haul facilities
 3. landfills
 4. disposal facilities
 5. solid waste incinerators
 6. refuse-derived fuel processing facilities
 7. pyrolysis facilities
 8. construction and demolition debris processing facilities
 9. land application facilities
 10. composting facilities
 11. surface impoundments
 12. used oil storage, reprocessing, and re-refining facilities
 13. recyclables handling and recovery facilities
 14. waste tire storage facilities
 15. RMW treatment facilities.The term includes all structures, appurtenances, and improvements on the land used for the management or disposal of solid waste (6 NYCRR 360-1.2).
- *Storage* - the containment of any solid waste in a manner which does not constitute disposal; provided, however, that any accumulation of solid waste for a period in excess of 18 mo shall be deemed to constitute disposal (6 NYCRR 360-1.2).

- *Storage* - the holding of solid waste for a temporary period, at the end of which the solid waste is processed, recovered disposed or stored elsewhere (6 NYCRR 364.1).
- *Storage Incidental to Transport* - any on-vehicle storage which occurs enroute from the point of initial waste pickup to the point of final delivery for purposes such as, but no limited to, overnight on-the-road stops, stops for meals, fuel and driver comfort, stops at the transporter's facility for weekends immediately prior to shipment, or on-vehicle storage not to exceed five days at the transporter's facility for the express purpose of consolidating loads (where such loads are not removed from their original packages or containers) for delivery to an authorized treatment, storage or disposal facility (6 NYCRR 364.1).
- *Surface Impoundment* - a solid waste management facility or part of one that is a natural topographical depression, excavation, or diked area formed primarily of earthen materials (although it may be lined with synthetic materials), that is designed to hold solid waste in semisolid or liquid form and that is not an injection well. Examples of surface impoundments are holding, storage, settling, and aeration pits, ponds, and lagoons (6 NYCRR 360-1.2).
- *Surface Impoundment or Impoundment* - a facility or part of a facility which is a natural topographical depression, man-made excavation, or diked area formed primarily of earthen materials (although it may be lined with man-made materials), which is designed to hold an accumulation of solid waste in semisolid or liquid form, and which is not an injection well. Examples of surface impoundments are holding, storage, settling and aeration pits, ponds and lagoons (6 NYCRR 364.1).
- *Surface Water* - lakes, bays, sounds, ponds, impounding reservoirs, perennial streams and springs, rivers, creeks, estuaries, marshes, inlets, canals, the Atlantic Ocean within the territorial limits of New York State, and all other perennial bodies of surface water, natural or artificial, inland or coastal, fresh or salt, public or private. Surface impoundments at solid waste management facilities are not surface waters (6 NYCRR 360-1.2).
- *Transfer Incident to Transport* - any transfer of waste material associated with storage incidental to transport where such material is not unpackaged, mixed or pumped from one container or truck into another (6 NYCRR 364.1).
- *Transfer Station* - a solid waste management facility other than a recyclables handling and recovery facility, used oil facility, or a construction and demolition debris processing facility, where solid waste is received for the purpose of subsequent transfer to another solid waste management facility for further processing, treating, transfer, or disposal. Transfer of solid waste from vehicle to vehicle for the purpose of consolidating loads, as part of the initial collection process, is not considered a transfer station provided the transfer activity occurs along the collection route where the point of transfer changes from day to day. Transfer of leakproof, closed modular containers of solid waste from vehicle to vehicle, including truck to train, for the purpose of consolidating loads for shipment to an authorized disposal or treatment facility, is not considered a transfer station provided all of the following conditions are met (6 NYCRR 360-1.2):
 1. the contents of each container remain in their closed container during the transfer between vehicles
 2. storage remains incidental to transport at the location where the containers are consolidated
 3. containers are acceptable to the Department and maintained in a safe, nuisance-free (e.g., dust, odor, noise, etc.) manner
 4. the transfer location is under the ownership or control of the transporter.
- *Treated Regulated Medical Waste* - RMW that has been treated to substantially reduce or eliminate its potential for causing disease but has not yet been destroyed (6 NYCRR 360-17.2).
- *Treatment* - except in the case of RMW, any method, technique, or process designed to change the physical, chemical, or biological character or composition of any solid waste to recover energy or materials from it to render it safer to transport, store, or dispose of or to make it amenable for reuse, recovery, storage, or reduction in volume (6 NYCRR 360-1.2). In regards to RMW, treatment means any method, technique, or process designed to change the character or composition of any RMW so as to either neutralize such waste or to render

such waste not infectious, safer for transport, amenable for recovery, amenable for storage, or reduced in volume (6 NYCRR 360-17.2).

- *Treatment, Storage or Disposal Facility (TSD)* - all contiguous land and structures, other appurtenances, and improvements on the land used for treating, storing or disposing of solid waste. A facility may consist of several treatment storage or disposal operations units (e.g., one or more landfills, surface impoundments or combinations of them) (6 NYCRR 364.1).
- *Uncontaminated* - With respect to construction and demolition debris (C&D debris), uncontaminated means C&D debris that is not mixed or commingled with other solid waste at the point of generation, processing or disposal, and that is not contaminated with spills of a petroleum product, hazardous waste or industrial waste. Contamination from spills of a petroleum product does not include asphalt or concrete pavement that has come into contact with petroleum products through normal vehicle use of the roadway. (6 NYCRR 360-7.1).
- *Unsaturated Zone* - any zone between the land surface and the zone of saturation in which the interconnected void spaces in soil or rock are only partially or intermittently filled with water (6 NYCRR 360-1.2).
- *Untreatable Waste* - the same as defined in ECL section 27-0704. Untreatable waste for a solid waste incinerator includes, but is not limited to: batteries, such as dry cell batteries, mercury batteries, and vehicle batteries; refrigerators; stoves; freezers; washers; dryers; bedsprings; vehicle frame parts, crankcases, transmissions, and engines; lawn mowers; snow blowers; bicycles; file cabinets; air conditioners; hot water heaters; water storage tanks; water softeners; furnaces; oil storage tanks; metal furniture; propane tanks; and clean fill (6 NYCRR 360-8.2).
- *Vector* - a carrier that is capable of transmitting a pathogen from one organism to another including, but not limited to, flies and other insects, rodents, birds, and vermin (6 NYCRR 360-1.2).
- *Vehicle* - any motor vehicle, trailer, water vessel, railroad car, airplane, or other device for transporting solid waste (6 NYCRR 360-1.2).
- *Vehicle* - any device or contrivance which is required by law to be registered with a state, province or the Federal government for conveyance over public roads and which actually contains or carries a regulated waste, for example, in the case of a tractor-trailer combination, the trailer is considered to be the vehicle; and in the case of a roll-off container or other removable containment device, it is the mobile flatbed or the undercarriage that is considered to be the vehicle (6 NYCRR 364.1).
- *Waste Oil* - used engine lubricating oil and any other oil, including but not limited to fuel oil, motor oil, gear oil, cutting oil, transmission fluid, hydraulic fluid, dielectric fluid, oil storage tank residue, animal oil, and vegetable oil, which has been contaminated by physical or chemical impurities, through use or accident, and has not subsequently been rerefined (6 NYCRR 364.1).
- *Waste Tire* - any solid waste which consists of whole tires or portions of tires. For the purposes of this section, tire casings separated for retreading and tires with sufficient tread for resale shall be included under this term, however, crumb rubber shall not be considered a solid waste (6 NYCRR 360-1.2).
- *Yard Waste* - leaves, grass clippings, garden debris, tree branches, limbs, and other similar wood materials (6 NYCRR 360-1.2).
- *Zone of Saturation* - a subsurface zone in which all the interstices are filled with water under pressure greater than that of the atmosphere (6 NYCRR 360-1.2).

Appendix 9-1

Materials Not Considered Solid Waste

(Source: 6 NYCRR Section 360-1.15)

The following materials are not considered solid waste by New York:

1. domestic sewage
2. any mixture of domestic sewage and other wastes that pass through a sewer system to a publicly owned treatment works for treatment, except for any material that is introduced into such system in order to avoid the provisions of this section
3. industrial wastewater discharges that are actual point source discharges subject to permits under *Environmental Conservation Law* (ECL) article 17. Industrial wastewaters, while they are being collected, stored, or treated before discharge, and sludges that are generated by industrial wastewater treatment are solid wastes and are regulated by this section
4. irrigation return flows
5. radioactive materials that are source, special nuclear, or byproduct material as defined by the Atomic Energy Act of 1954, as amended (see Codes, Rules, and Regulations of the State of New York, Title 6, Chapter IV, Subchapter B, Part 360, Subpart 360-1, Section 360-1.3 (6 NYCRR 360-1.3))
6. materials subject to in situ mining techniques that are not removed from the ground as part of the extraction process
7. discarded materials that the Department has determined are being beneficially used pursuant to 6 NYCRR 360-1.15
8. materials including source separated recyclables that have been traditionally incorporated as a secondary material in the manufacturing process. In this context, manufacturing processes may include, but not be limited to, the production of:
 - a. inorganic chemicals
 - b. iron, steel and iron, and steel products
 - c. leather and leather products
 - d. nonferrous metals and nonferrous metal products
 - e. organic chemicals
 - f. plastic products and plastic resins
 - g. pulp and paper products
 - h. rubber and miscellaneous plastic products
 - i. textiles and textile products
 - j. household and business products
 - k. transportation equipment.

The following items are no longer considered solid waste when used as described:

1. materials identified as hazardous waste
2. compost and other redistribution and marketing products
3. unadulterated wood, wood chips, or bark from land clearing, logging operations, utility line clearing and maintenance operations, pulp and paper production, and wood products manufacturing, when these materials are placed in commerce for service as mulch, landscaping, animal bedding, erosion control, wood fuel production, and bulking agent at a compost facility
4. uncontaminated newspaper or newsprint when used as animal bedding
5. uncontaminated glass when used as a substitute for conventional aggregate in asphalt or subgrade applications
6. tire chips when used as aggregate for road base materials or asphalt pavements in accordance with New York State Department of Transportation standard specifications, or whole tires or tire chips when used for energy recovery
7. uncontaminated soil which has been excavated as part of a construction project, and which is being used as a fill material, in place of soil native to the site of disposition
8. nonhazardous, contaminated soil which has been excavated as part of a construction project, other than a Department-approved or undertaken inactive hazardous waste disposal site remediation program, and

which is used as backfill for the same excavation or excavations containing similar contaminants at the same site; excess materials on these projects are subject to the requirements in this section

9. nonhazardous petroleum contaminated soil which has been decontaminated to the satisfaction of the Department and is being used in a manner acceptable to the Department
10. solid wastes which are approved in advance, in writing, by the Department for use as daily cover material or other landfill liner or final cover system components when received at the landfill
11. recognizable, uncontaminated concrete and concrete products, asphalt pavement, brick, glass, soil, and rock placed in commerce for service as a substitute for conventional aggregate
12. nonhazardous petroleum contaminated soil when incorporated into asphalt pavement products by a producer authorized by the Department
13. unadulterated wood combustion bottom ash, fly ash, or combined ash when used as a soil amendment or fertilizer, provided the application rate of the wood ash is limited to the nutrient need of the crop grown on the land on which the wood ash will be applied and does not exceed 16 dry tons per acre per year
14. coal combustion bottom ash placed in commerce to serve as a component in the manufacture of roofing shingles or asphalt products; or as a traction agent on roadways, parking lots, and other driving surfaces
15. coal combustion fly ash or gas scrubbing byproducts placed in commerce to serve as an ingredient to produce lightweight block, lightweight aggregate, low strength backfill material, manufactured calcium chloride
16. coal combustion fly ash or coal combustion bottom ash placed in commerce to serve as a cement or aggregate substitute in concrete or concrete products; as raw feed in the manufacture of cement; or placed in commerce to serve as structural fill within building foundations when placed above the seasonal high groundwater table.

Appendix 9-2

Exempt Facilities

(Source: 6 NYCRR Section 360-1.7(b)) [Revised March 2006]

Exemptions

The following solid waste management facilities that do not manage used oil are exempt from regulation:

1. disposal areas located within the property boundaries of a single family residence or farm for solid waste generated from that residence or farm
2. disposal areas for waste pesticides by the farmer who used them if the farmer complies with pesticide requirements (see category PM.55 in the Pesticide Management section of the New York Supplement)
3. disposal areas located within the property boundaries of a farm for crop residuals, animal and aquacultural manure, animal and aquacultural carcasses and parts generated from a farm, and other similar solid waste generated by farm activities
4. transfer, temporary storage, treatment, incinerator and processing facilities (including mobile processing facilities which are temporarily brought onto the site), except regulated medical waste treatment facilities, located at a single or multiple family residence, school, park, industry, hospital, commercial establishment, correctional facility, or farm and used exclusively for the management of solid waste generated at that location or at a location under the same ownership within a single region of the department. In certain cases where the department determines that these activities pose an adverse impact on public health, safety, or the environment, the department may set time limitations on the activities covered under this exemption. For excavated petroleum contaminated soils, on-site storage is limited to 60 days unless otherwise approved by the department.
5. transfer, storage, treatment, incinerator, and processing facilities, except composting or other distribution and marketing facilities, located at publicly owned treatment works or other sewage treatment plants, and used exclusively for sewage sludge, septage, or leachate. Storage is limited to less than 18 mo
6. the initial site used for the collection of household hazardous waste and household medical waste for a cleanup day or similar event sponsored or cosponsored by a community or governmental organization on a not-for-profit basis, and designed to assist the public in disposing of unwanted pesticides and other household hazardous and medical waste if:
 - a. the sponsoring organization submits a detailed written plan at least 60 days before the date of the event and receives written approval prior to the event from the regional director of the Department's region where the cleanup will take place
 - b. all wastes are removed from the site within 3 days of collection
 - c. wastes are packaged, labeled, and manifested properly
 - d. all transportation of the wastes from the collection point is done in accordance with a permit
7. a transporter storing shipments of nonputrescible industrial and nonputrescible commercial waste, other than RMW, in containers or in vehicles at its own transfer facility for a period of five calendar days or less, if the transporter:
 - a. maintains a log of the time and date on which each container or transport vehicle of waste is received or shipped
 - b. does not open any container or transport vehicle for any purpose, including sampling, transfer, treatment, or addition of absorbent
 - c. stores the waste in a container or transport vehicle that meets the design requirements specified by the U.S. Department of Transportation for each type of waste stored. During storage and shipment, these containers or transport vehicles must be packaged, labeled, and marked in accordance with 49 CFR, parts 171, 173, 178, and 179
 - d. stores containers or transport vehicles in a manner which will not rupture the container or transport vehicle or cause it to leak
 - e. complies with the standards for hazardous waste discharges from transporters
 - f. immediately notifies the appropriate regional office of the Department in which a spill or leak occurs of that spill or leak
 - g. inspects the containers or transport vehicles daily for leaks and deterioration, caused by corrosion or other factors, and keeps a written log of the inspections

8. a facility that exclusively treats wastewater that is regulated under wastewater discharge requirements
9. solid waste from nonhazardous inactive landfills which has been excavated as part of a construction project and is being returned to the same excavation or other excavations containing similar solid waste or otherwise relocated within the landfill's existing footprint, provided the handling, relocation, and disposal practices are deemed acceptable to the Department in writing in advance
10. disposal areas for road-killed animals on local roads and state and county highways under the jurisdiction of government agencies. Such disposal areas must, however, be located on property owned by the government agency and within the highway right-of-way. Disposal areas must be a minimum of 50 ft from any residence, surface water, or any other disposal area for road-killed animals. No more than 10 road-killed animals may be placed in a single disposal area. Road-killed animals placed in disposal areas must be covered with at least 3 ft of excavated soil material and in no case shall be placed within groundwater. Mass burial of road-killed animals is not exempt. Acceptable alternatives for the disposal of road-killed animals include disposal at a Department-approved solid waste landfill, disposal at a rendering facility, or other means as approved by the Department
11. open burning of solid waste conducted in compliance with a restricted burning permit issued by the Department
12. individual graves for burial of animals, including pet cemeteries, provided mass burial of animal carcasses is not practiced.

Appendix 9-3

Exemptions from Transportation Requirements

(Source: 6 NYCRR Section 364.1(e)) [Revised March 2004]

(e) Exemptions.

- (1) Rail, water and air carriers are exempt from the requirements of this Part.
- (2) Vehicles transporting the following regulated wastes are exempted from this Part, provided that no other regulated waste is intermixed, contained in, or otherwise included with such waste:
 - (i) vegetable oils and greases from restaurants and fast food operations;
 - (ii) tallow (animal fat);
 - (iii) food processing waste destined for use in other food or animal feed processes (except blood);
 - (iv) garbage and trash collected from cafeterias;
 - (v) food processing residues which are recognizable as part of the plant or vegetable, including, but not limited to cabbage leaves, bean snips, onion skins, apple pomace and grape pomace (except brewery wastes);
 - (vi) scraps, including but not limited to plastic, rubber, paper, cardboard, wood chips, glass and metal;
 - (vii) grubbing, construction and renovation debris, such as roots, stumps, bricks, cement, asphalt, blacktop, stone and like materials, except asbestos;
 - (viii) agricultural waste, including but not limited to crop residues and animal manure productively employed in agriculture;
 - (ix) nonhazardous dredge or fill material;
 - (x) nonhazardous bottom and fly ash from incinerators and resource recovery facilities;
 - (xi) foundry sand containing no phenols (less than one part per billion);
 - (xii) empty drums or containers destined for reconditioning or being returned to the original manufacturer;
 - (xiii) empty food containers being collected, transported or stored for recycling or reuse;
 - (xiv) samples shipped to laboratories solely for analysis;
 - (xv) scrap lead-acid automotive batteries destined for recovery;
 - (xvi) waste transported by a public utility vehicle where the transportation of such waste is incidental to the primary function of the vehicle whenever the waste is brought to a utility-owned collection facility for storage prior to treatment or disposal;
 - (xvii) waste collected, transported or transferred wholly on-site by the person responsible for the origination, generation or occurrence of such waste, provided that storage, treatment and disposal of waste upon those premises are authorized pursuant to this Title. (As used in this subparagraph, on-site means the same or geographically contiguous property. It may be divided by public or private right-of-way, provided the entrance and exit between the properties is at a crossroads intersection, and access is by crossing, as opposed to going along, the right-of-way. Noncontiguous properties owned by the same person, but connected by a right-of-way which that person controls and to which the public does not have access, are also considered on-site property.);
 - (xviii) pesticides, transported by the farmer who generated them, to a pesticide clean-up day collection site authorized pursuant to section 360.1(f)(1)(xi) or 373-1.1(d)(1)(xviii) of this Title; and
 - (xix) bottom ash from the burning of fossil fuel, provided that:
 - (a) the ash has been tested for toxicity by the owner or operator of the generating facility pursuant to a testing protocol approved by the commissioner, and certified to be nontoxic; and
 - (b) the ash is destined for use by a municipality or other governmental entity as a traction agent on roadways.
 - (xx) wastes transported during an explosive munitions emergency response as defined in section 370.2(b) conducted in accordance with section 373-1.1(d)(1)(xiii)(a)(4) of this Title.

Appendix 9-4

Exclusions and Exemptions to the Medical Waste Definition

(Source: 6 NYCRR Section 360-17.2)

Exclusions

hazardous waste identified or listed under the regulations in Part 371 of 6 NYCRR

household waste, as defined in 6 NYCRR 360

ash from incineration of RMW once the incineration process has been completed

residues from treatment and destruction processes once the waste has been both treated and destroyed

human corpses, remains, and anatomical parts that are intended for interment or cremation

Exemptions

samples of RMW transported offsite by USEPA or state-designated enforcement personnel for enforcement purposes are exempt from the medical waste requirements during the enforcement proceeding.

Appendix 9-5

Pathogen and Vector Attraction Reduction Requirements for OWP Facilities

(Source: 6 NYCRR Section 360-5.5(b)) [Added March 2004]

The following requirements apply to mixed solid waste and solid waste that contains any amount of human waste.

(1) One of the following alternatives (designated as Class A pathogen reduction) must be used to reduce pathogen content before the material leaves the facility. Alternative 2 is not applicable for composting. Alternative 4 or 5 can only be used if the process cannot produce operational data that could be used to meet another PR alternative.

(i) Class A - Alternative 1. Either the density of fecal coliform in the product is less than 1000 Most Probable Number per gram of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the product is less than three Most Probable Number per four grams of total solids (dry weight basis) at the time of product use or disposal and the waste must be treated by one of the following processes:

(a) Composting. Using the windrow composting method, the solid waste is maintained under aerobic conditions during the compost process. A minimum of five turnings is required during a period of 15 consecutive days when the temperature of the mixture is not less than 55 degrees Celsius.

Using the aerated static pile composting method or the within-vessel composting method, the temperature of the solid waste is maintained at 55 degrees Celsius or higher for at least three consecutive days.

(b) Heat drying. Waste is dried by direct or indirect contact with hot gases to reduce the moisture content of the waste to 10 percent or lower. One of the following must be achieved:

(1) either the temperature of the waste particles must exceed 80 degrees Celsius or

(2) the wet bulb temperature of the gas in contact with the waste as it leaves the dryer must exceed 80 degrees Celsius.

(c) Heat treatment. Liquid waste is heated to a temperature of 180 degrees Celsius or higher for at least 30 minutes.

(d) Thermophilic aerobic digestion. Liquid waste is agitated with air or oxygen to maintain aerobic conditions and the mean cell residence time of the waste is at least 10 days at 55 degrees Celsius or greater.

(e) Beta ray irradiation. Waste is irradiated with beta rays from an accelerator at dosages of at least 1.0 megarad at room temperature (approximately 20 degrees Celsius).

(f) Gamma ray irradiation. Waste is irradiated with gamma rays from certain isotopes, such as Cobalt 60 and Cesium 137, at dosages of at least 1.0 megarad at room temperature (approximately 20 degrees Celsius).

(g) Pasteurization. The temperature of the waste is maintained at 70 degrees Celsius or higher for 30 minutes or longer.

(h) Other methods. Other methods or operating conditions may be approved by the department if the department determines that pathogens are reduced to an extent equivalent to the reduction achieved by the above methods.

(ii) Class A - Alternative 2. Treatment by thermophilic aerobic or anaerobic digestion. Either the density of fecal coliform in the product must be less than 1000 Most Probable Number per gram of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the product must be less than three Most Probable Number per four grams of total solids (dry weight basis) at the time of product use or disposal, and the temperature of the solid waste must be maintained at a specific value for a period of time, as follows:

(a) When the percent solids of the waste is seven percent or higher, the temperature of the waste must be 50 degrees Celsius or higher, the time period must be 20 minutes or longer, and the temperature and time period must be determined using the following equation, except when small particles of waste are heated by either warmed gases or an immiscible liquid.

$$D = 131,700,000$$

$$\frac{\quad}{100.1400 t}$$

Where,

D = time in days.

t = temperature in degrees Celsius.

- (b) When the percent solids of the solid waste is seven percent or higher and small particles of waste are heated by either warmed gases or an immiscible liquid, the temperature and time period must be determined using the equation in clause (a) of this subparagraph. The temperature of the waste must be 50 degrees Celsius or greater and the time period must be 15 seconds or longer.
- (c) When the percent solids of the waste is less than seven percent and the time period is at least 15 seconds, but less than 30 minutes, the temperature and time period must be determined using the equation in clause (a) of this subparagraph.
- (d) When the percent solids of the waste is less than seven percent, the temperature of the waste is 50 degrees Celsius or higher, and the time period is 30 minutes or longer, the temperature and time period must be determined using the following equation:

$$D = \frac{50,070,000}{100.1400 t}$$

100.1400 t

Where,

D = time in days.

t = temperature in degrees Celsius.

(iii) Class A - Alternative 3. Either the density of fecal coliform in the product must be less than 1000 Most Probable Number per gram of total solids (dry weight basis), or the density of Salmonella sp. bacteria in the product must be less than three Most Probable Number per four grams of total solids (dry weight basis) at the time of product use or disposal and the following conditions must be satisfied:

- (a) The pH of the waste must be raised to above 12 and remain above 12 for at least 72 hours.
- (b) The temperature of the waste must remain above 52 degrees Celsius for 12 hours or longer during the period that the pH of the waste is above 12.
- (c) At the end of the 72-hour period during which the pH of the waste is above 12, the waste must be air dried to achieve a percent solids in the waste greater than 50 percent.

(iv) Class A - Alternative 4. Either the density of fecal coliform in the product must be less than 1000 Most Probable Number per gram of total solids (dry weight basis), or the density of Salmonella sp. bacteria in the product must be less than three Most Probable Number per four grams of total solids (dry weight basis) at the time of product use or disposal, and the following conditions must be satisfied:

- (a) The density of enteric viruses in the product must be less than one Plaque-forming Unit per four grams of total solids (dry weight basis).
- (b) The density of viable helminth ova in the product must be less than one per four grams of total solids (dry weight basis).

(v) Class A - Alternative 5. Either the density of fecal coliform in the waste must be less than 1000 Most Probable Number per gram of total solids (dry weight basis), or the density of Salmonella sp. bacteria in the product must be less than three Most Probable Number per four grams of total solids (dry weight basis) at the time of product use or disposal, and the following conditions must be satisfied:

- (a) The waste must be analyzed prior to pathogen treatment to determine whether the waste contains enteric viruses.
- (b) When the density of enteric viruses in the waste prior to pathogen treatment is less than one Plaque-forming Unit per four grams of total solids (dry weight basis), the waste is Class A with respect to enteric viruses until the next monitoring episode for the waste.
- (c) If the density of enteric viruses in the waste prior to pathogen treatment is equal to or greater than one Plaque-forming Unit per four grams of total solids (dry weight basis), the waste is not considered Class A with respect to enteric viruses until the density of enteric viruses in the waste, after pathogen treatment is less than one Plaque-forming Unit per four grams of total solids (dry weight basis) and the values or ranges of values for

the operating parameters of the pathogen treatment process (that produces the waste that meets the enteric virus density requirement) are documented.

- (d) After the enteric virus reduction in clause (c) of this subparagraph is demonstrated for the pathogen treatment process, the waste continues to be Class A with respect to enteric viruses when the values for the pathogen treatment process operating parameters are consistent with the values or ranges of values documented in clause (c) of this subparagraph.
- (e) The waste must be analyzed prior to pathogen treatment to determine whether the waste contains viable helminth ova.
- (f) When the density of viable helminth ova in the waste prior to pathogen treatment is less than one per four grams of total solids (dry weight basis), the waste is Class A with respect to viable helminth ova until the next monitoring episode for the waste.
- (g) If the density of viable helminth ova in the waste prior to pathogen treatment is equal to or greater than one per four grams of total solids (dry weight basis), the waste is not considered Class A with respect to viable helminth ova until the density of viable helminth ova in the waste, after pathogen treatment, is less than one per four grams of total solids (dry weight basis), and the values or ranges of values for the operating parameters for the pathogen treatment process (that produces the waste that meets the viable helminth ova density requirement) are documented.
- (h) After the viable helminth ova reduction in clause (g) of this subparagraph is demonstrated for the pathogen treatment process, the waste continues to be Class A with respect to viable helminth ova when the values for the pathogen treatment process operating parameters are consistent with the values or ranges of values documented in clause (g) of this subparagraph.

(2) One of the following vector attraction reduction methods must be achieved before the material leaves the facility. Vector attraction reduction methods, except the methods found in subparagraphs 360-5.5(b)(2)(vi) - (viii), must be met either after meeting or at the same time the pathogen reduction requirements are met.

- (i) The mass of volatile solids in the waste must be reduced by a minimum of 38 percent.
- (ii) If the volatile solids reduction requirement cannot be met for an anaerobically digested waste, vector attraction reduction can be demonstrated by anaerobically digesting a portion of the previously digested waste in a laboratory bench-scale unit for 40 additional days at a temperature between 30 and 37 degrees Celsius. Vector attraction reduction is achieved if the bench-scale digestion produces less than a 17 percent reduction in volatile solids content.
- (iii) If the volatile solids reduction requirement cannot be met for an aerobically digested waste, vector attraction reduction can be demonstrated by aerobically digesting a portion of the previously digested waste that has a percent solids of two percent or less in a laboratory bench-scale unit for an additional 30 days at 20 degrees Celsius. Vector attraction reduction is achieved if the bench-scale digestion produces less than a 15 percent reduction in volatile solids content.
- (iv) The specific oxygen uptake rate (SOUR) for waste treated in an aerobic process must be equal to or less than 1.5 milligrams of oxygen per hour per gram of total solids (dry weight basis) at a temperature of 20 degrees Celsius.
- (v) Waste must be treated by an aerobic process for a minimum of 14 days. Throughout that treatment time, the temperature of the waste must remain higher than 40 degrees Celsius and the average temperature of the waste must be higher than 45 degrees Celsius.
- (vi) The pH of the waste must be raised to 12 standard units or higher by alkali addition and, without the addition of more alkali, must remain at 12 or higher for two hours, and then must remain at 11.5 or higher for an additional 22 hours.
- (vii) For waste that does not contain untreated solids generated in a primary wastewater treatment process, the percent solids of the waste must be equal to or greater than 75 percent, prior to mixing with other materials, until use.
- (viii) For waste that contains untreated solids generated in a primary wastewater treatment process, the percent solids of the waste must be equal to or greater than 90 percent, prior to mixing with other materials, until use.

Appendix 9-6

Pollutant Limits - Class B Materials & Input to Class A Facilities

(Source: 6 NYCRR Section 360-5.10 Table 4) [Added March 2004]

| Parameter | Monthly Average Concentration mg/kg, dry weight | Maximum Concentration mg/kg, dry weight |
|---------------------|---|---|
| Arsenic (As) | 41 | 75 |
| Cadmium (Cd)* | 21 | 85 |
| Chromium (Cr-total) | 1000 | 1000 |
| Copper (Cu) | 1500 | 4300 |
| Lead (Pb) | 300 | 840 |
| Mercury (Hg) | 10 | 57 |
| Molybdenum (Mo) | 40 | 75 |
| Nickel (Ni) | 200 | 420 |
| Selenium (Se) | 100 | 100 |
| Zinc (Zn) | 2500 | 7500 |

* if the monthly average cadmium concentration exceeds 5 ppm, dry weight basis, the cadmium/zinc ratio must not exceed 0.015.

Appendix 9-7

Pollutant Limits - Products

(Source: 6 NYCRR Section 360-5.10 Table 7) [Added March 2004]

| Parameter | Monthly Average Concentration mg/kg, dry weight | Maximum Concentration mg/kg, dry weight |
|---------------------|--|--|
| Arsenic (As) | 41 | 75 |
| Cadmium (Cd)* | 10 | 85 |
| Chromium (Cr-total) | 1000 | 1000 |
| Copper (Cu) | 1500 | 4300 |
| Lead (Pb) | 300 | 840 |
| Mercury (Hg) | 10 | 57 |
| Molybdenum (Mo) | 40 | 75 |
| Nickel (Ni) | 200 | 420 |
| Selenium (Se) | 100 | 100 |
| Zinc (Zn) | 2500 | 7500 |

* if the monthly average cadmium concentration exceeds 5 ppm, dry weight basis, the cadmium/zinc ratio must not exceed 0.015.

Appendix 9-8

Parameters for Analysis - Biosolids/Sludge

(Source: 6 NYCRR Section 360-5.10 Table 1 and 2) [Added March 2004]

| Table 1: Parameters for Analyses | | |
|---|------------------|----------------|
| Group A | Group B | Group C |
| Total Kjeldahl Nitrogen | Arsenic | Extended |
| Ammonia | Cadmium | Parameters |
| Nitrate | Chromium (total) | (see Table 2) |

| 5-50 | 12 |
| <5 | 6 |

Appendix 9-11

Land Application Registration Restrictions

(6 NYCRR 360-4.2(b) [Added March 2004; Citation Revised March 2008]

b) Registration.

The following solid waste management facilities are eligible for the registration provisions of subdivision 360-1.8(h) of this Part if the facility is operated in compliance with the applicable requirements of subdivision 360-1.8(h) and this subdivision. Sufficient information must be submitted with the registration request to demonstrate that the facility will comply with the applicable criteria. Any eligible or registered facility which is not operated in compliance with these conditions requires a permit pursuant to this Part and will be subject to the applicable enforcement provisions.

- (1) A land application and a manure storage facility involving nonrecognizable food processing wastes or fish hatchery waste, provided the following conditions are satisfied:
 - (i) the facility complies with the operational requirements of subdivisions 360-4.6(a) and (b) of this Subpart, excluding paragraphs 360-4.6(b)(10) and (12). A minimum of one representative analysis of the waste for the parameters found in Group A and Group B of subdivision 360-4.4(a) must be submitted;
 - (ii) the volume of waste land applied is limited to prevent ponding, except for temporary conditions following rainfall events. If ponding occurs, land application ceases immediately;
 - (iii) land application on frozen or snow-covered ground is limited to land with a slope of less than 4 percent, unless the separation distance to a surface water and State regulated wetland is increased to 500 feet and berms are used;
 - (iv) dikes, berms, or other runoff control devices are used, if deemed necessary by the department;
 - (v) the application rate of whey does not exceed the nitrogen needs of the crop and a chloride loading of 170 lbs. per acre per year;
 - (vi) the waste is beneficial to the crop grown and the waste does not contain any human sanitary waste (e.g. domestic sewage, biosolids, septage) or it is demonstrated that the sanitary waste is a minor component of the waste stream and pathogenic organism content are below detectable levels in the waste;
 - (vii) a maximum of 10 percent of the total volume of a manure storage facility may consist of food processing waste, unless it can be demonstrated that the manure storage facility has been designed to minimize potential for negative ground water and surface water impacts. The land application of this mixture is not subject to the criteria in this paragraph, but should be conducted in accordance with acceptable agricultural practices; and
 - (viii) for land application sites located in the New York City watershed, application rates are based on the phosphorus needs of the crop grown, a Comprehensive Nutrient Management Plan has been developed for the farms involved, and the application sites have been clearly mapped and marked.

- (2) A land application facility for septage from one hauler using not more than two vehicles for collection related to land application, provided the following conditions are satisfied:
 - (i) The facility complies with the operational requirements of subdivision 360-4.6(b) of this Subpart, excluding paragraphs(4),(6), and (14).
 - (ii) Soil testing - one representative analysis for each 15 acres or fraction thereof is required once every three years of use, beginning in the first year septage is applied to a site. Soil analyses will occur prior to the first application for that year. The analysis must include nutrients (nitrogen, potassium, and phosphorus). This requirement applies to acreage used for septage application.
 - (iii) A minimum of 15 acres must be available for each vehicle. Vegetation must be grown at the application facility that is sufficient to utilize all the available nitrogen provided from septage application.
 - (iv) The application rate does not exceed 25,000 gallons per acre per year, or the rate determined by the following calculation, whichever is less:
Application Rate (gallons/acre/year) = Crop nitrogen needs (lbs. nitrogen/acre) x 385.
The application rate may be changed if the septage is altered (e.g., dewatered) prior to application.

- (v) For pathogen reduction, the pH of the septage is raised to 12 or higher by alkali addition and, without the addition of more alkali, the septage remains at 12 or higher for 30 minutes, and the following site restrictions must be followed:
 - (a) food crops with harvested parts that touch the septage/soil mixture and are totally above the land surface must not be harvested for 14 months after land application. Food crops with harvested parts below the surface of the land must not be harvested for 38 months after land application; and
 - (b) food crops grown above the soil with harvested parts that do not touch the septage/soil mixture, feed crops and fiber crops must not be harvested for at least 30 days after land application.
 - (vi) Annual groundwater monitoring may be required as determined by the Department.
 - (vii) The following records must be kept for at least five years after any application of septage to a site, must be available to the department on request, and shall be provided to the department in the annual report pursuant to paragraph 360-1.8(h)(8) of this Part:
 - (a) the location of the site of land application including either the street address or the longitude and latitude of the site (available from a USGS map);
 - (b) the total number of acres to which septage was applied and the total gallons of septage applied;
 - (c) the date of each application, the gallons of septage applied, and the acres used;
 - (d) pH data and related information to show compliance with pathogen and vector attraction reduction criteria;
 - (e) the crop grown; and
 - (f) the following certification statement, signed by the person responsible for land application of the septage:
 "I certify, under penalty of law, that the information that will be used to determine compliance with Subpart 360-4 of 6 NYCRR Part 360 has been prepared under my direction and supervision in accordance with the system designed to ensure that qualified personnel properly gather and evaluate this information. I am aware that there are significant penalties for false certification including the possibility of fine and imprisonment."
 - (viii) A copy of the validated registration must be kept in the appropriate vehicle.
 - (ix) Transition. The transition provision outlined in clause 360-1.7(a)(3)(v)(b) applies to these facilities.
- (3) A storage or transfer facility for septage from one hauler using no more than two vehicles for collection.
- (i) The minimum horizontal separation distances from the perimeter of the storage facility must meet the requirements found in paragraph 360-4.6(b)(1) of this Subpart, except that the minimum horizontal separation distance to a nearby residence, place of business, or public contact area must be at least 1,500 feet for surface impoundments.
 - (ii) Surface water must be directed away from the storage facility.
 - (iii) Vector and odor control measures must be implemented when necessary, as determined by the department.
 - (iv) Surface impoundments and open tanks must be properly fenced and posted or otherwise constructed to prevent unauthorized access, as determined by the department.
 - (v) All storage facilities must be completely emptied, cleaned, and inspected at least once every 12 months. The department must be notified at least one week before the cleaning operation is complete to afford the department the opportunity to inspect the facility before additional material is placed in the facility. Tanks must be tested for tightness biennially, with results sent to the appropriate regional office of the department. Any damage or deterioration revealed by the inspections must be repaired before that facility again receives waste.
 - (vi) Surface impoundments must be constructed above the 100-year flood elevation, and must be constructed with a liner system. The liner system must consist of either a minimum of two feet of compacted soil having a maximum remolded coefficient of permeability of 1×10^{-7} centimeters per second, or a synthetic material approved by the department. The soil material particles must be able to pass through a one inch screen.
 - (vii) Ground and/or surface water monitoring programs must be implemented, if required by the department.
 - (viii) Surface impoundments must maintain a minimum of two feet of freeboard and may be no deeper than 6 feet. The bottom of the impoundment liner must be a minimum of five feet above both seasonal high groundwater and bedrock.

- (ix) Storage facilities other than surface impoundments may be constructed of concrete, steel, or other material approved by the department. The storage facility must be designed with a minimum of two feet of freeboard.
 - (x) The transfer facility involves the movement of septage from one truck to another vehicle. The septage must not remain on either truck for more than seven days. The facility must be operated in nuisance-free manner with all spills cleaned up immediately.
 - (xi) Transition. The transition provision outlined in clause 360-1.7(a)(3)(v)(b) applies to these facilities, except the time frame for registering is 365 calendar days.
- (4) Disposal facilities for septage, provided the following conditions are satisfied:
- (i) A written closure and post closure plan is submitted to the department 180 days prior to the date that the disposal facility closes. The plan must describe how the facility will be closed and, at a minimum, must include the following: a discussion of how the leachate collection system will be operated and maintained for three years after the disposal facility closes if the facility has a liner and leachate collection system; a description of the system used to monitor for methane gas in the air in any structure within the boundaries of the disposal site and in the air at the property line of the disposal site; and a discussion of how public access to the disposal site will be restricted for three years after the facility closes.
 - (ii) If the site is sold, the owner of a disposal site must provide written notification to the subsequent owner of the site that septage was placed on the land.
 - (iii) Septage may not be placed in a disposal facility if it is likely to adversely affect a threatened or endangered species or its designated critical habitat.
 - (iv) The disposal facility must not restrict the flow of a base flood.
 - (v) If the disposal site is located in a seismic impact zone, the disposal facility must be designed to withstand the maximum recorded horizontal ground level acceleration.
 - (vi) The disposal facility must be located 60 meters or more from a fault that has displacement in Holocene time, unless otherwise approved by the department.
 - (vii) The disposal facility may not be located in an unstable area.
 - (viii) The minimum horizontal separation distances from the perimeter of the disposal facility must meet the requirements found in paragraph 360-4.6(b)(1) of this Subpart, except that the minimum horizontal separation distance to a nearby residence, place of business, or public contact area must be at least 1,500 feet.
 - (ix) Run-off must be directed away from the disposal facility.
 - (x) The leachate collection system for a disposal facility that has a liner and leachate collection system must be operated and maintained during the active life of the facility and for three years after closure.
 - (xi) Leachate from an active disposal facility that has a liner and leachate collection system must be collected and disposed in a manner approved by the department during the period the facility is open and for three years after the facility closes.
 - (xii) The concentration of methane gas in air in any structure located within the site may not exceed 25 percent of the lower explosive limit for methane gas during the period that the facility is open and the concentration of methane gas in air at the property line of the site may not exceed the lower explosive limit for methane gas during the period the facility is open.
 - (xiii) When a final cover is placed on the disposal facility at closure, the concentration of methane gas in air in any structure located within the site does not exceed 25 percent of the lower explosive limit for methane gas for three years after the facility closes and the concentration of methane gas in air at the property line of the site does not exceed the lower explosive limit for methane gas for three years after the facility closes, unless otherwise specified by the department.
 - (xiv) A food crop, a feed crop, or a fiber crop must not be grown on an active disposal facility.
 - (xv) Animals must not be grazed on an active disposal facility.
 - (xvi) Public access to a disposal site must be restricted for the period the facility is active and for three years after the facility is closed.
 - (xvii) Septage placed in a disposal facility must not contaminate groundwater. Results of a ground water monitoring program developed by a qualified ground water scientist or a certification by a qualified ground water scientist shall be used to demonstrate that the facility does not contaminate groundwater.
 - (xviii) Septage placed on a disposal facility must be covered with soil or other acceptable material at the end of each operating day.

- (xix) Air in structures within a disposal site and at the property line of the site must be monitored continuously for methane gas during the period that the disposal facility is in operation and for three years after the facility closes when a final cover is placed on the facility.
- (xx) The following information must be developed and retained for five years:
 - (a) The following certification statement:

"I certify, under penalty of law, that the management practices and the vector attraction reduction requirements in Subpart 360-4 have been met. This determination has been made under my direction and supervision in accordance with the system designed to ensure that qualified personnel properly gather and evaluate the information used to determine that the vector attraction requirements have been met. I am aware that there are significant penalties for false certification including the possibility of fine and imprisonment."
 - (b) A description of how the requirements have been satisfied.
- (xxi) Transition. The transition provision outlined in clause 360-1.7(a)(3)(v)(b) applies to these facilities, except the time frame for registering is 365 calendar days.

Appendix 9-12

Cumulative Metal Loading Limits

(NYCRR 360-5.10 Table 5) [Added March 2004; Citation Revised March 2008]

| Metal | Cumulative Loading Limit (lbs./acre) | |
|----------|--------------------------------------|----------------------|
| | Ag. Soil Groups 1-3 | Ag. Soil Groups 4-10 |
| Cadmium | 3 | 4 |
| Chromium | 300 | 446 |
| Copper | 75 | 112 |
| Lead | 267 | 267 |
| Nickel | 30 | 45 |
| Zinc | 150 | 223 |

Appendix 9-13

Pathogen and Vector Attraction Reduction Requirements for Biosolids Land Application Facilities

(NYCRR 360-4.7(b)) [Added March 2004]

(1) One of the following alternatives, designated as Class B pathogen reduction, must be used to significantly reduce pathogens in the biosolids prior to land application:

(i) Class B - Alternative 1. The biosolids must be treated by one of the following processes:

- (a) Aerobic digestion. Biosolids are agitated with air or oxygen to maintain aerobic conditions for a mean cell residence time of at least 40 days at 20 degrees Celsius or greater or at least 60 days if the temperature is less than 20 degrees Celsius but greater than or equal to 15 degrees Celsius.
- (b) Air drying. Biosolids are dried on sand beds or on paved or unpaved basins, at a maximum depth of nine inches. The biosolids must dry for a minimum of three months. During at least two of the three months, the ambient average daily temperature must be above zero degrees Celsius.
- (c) Anaerobic digestion. Biosolids are treated in the absence of air for a mean cell residence time of at least 15 days at 35 degrees Celsius or greater or at least 60 days at less than 35 degrees Celsius but greater than or equal to 20 degrees Celsius.
- (d) Composting. Using the within-vessel, aerated static pile or windrow composting methods, the temperature of the biosolids is raised to 40 degrees Celsius or higher and remains at 40 degrees Celsius or higher for five consecutive days. For at least 4 consecutive hours during the five days, the temperature in the compost pile must exceed 55 degrees Celsius.
- (e) Lime stabilization. Sufficient lime must be added to the biosolids to raise the pH of the biosolids to 12 standard units and maintain this pH for a period of at least two hours.
- (f) Other methods. Other methods or operating conditions may be acceptable if pathogens are reduced to an extent equivalent to the reduction achieved by any of the above methods and must be approved by the department.

(ii) Class B - Alternative 2. The geometric mean of the density of fecal coliform of seven analyses representative of the waste to be land applied must be less than either 2,000,000 Most Probable Number per gram of total solids (dry weight basis) or 2,000,000 Colony Forming Units per gram of total solids (dry weight basis). The seven samples must be taken over a 14-day period.

(2) One of the following vector attraction reduction requirements must be achieved:

- (i) The mass of volatile solids in the biosolids is reduced by a minimum of 38 percent.
- (ii) If the volatile solids reduction requirement cannot be met for anaerobically digested biosolids, vector attraction reduction can be demonstrated by anaerobically digesting a portion of the previously digested biosolids in a laboratory bench-scale unit for 40 additional days at a temperature between 30 and 37 degrees Celsius. Vector attraction reduction is achieved if the bench-scale digestion produces less than a 17 percent reduction in volatile solids content.
- (iii) If the volatile solids reduction requirement cannot be met for aerobically digested biosolids, vector attraction reduction can be demonstrated by aerobically digesting a portion of the previously digested biosolids that has a percent solids of 2 percent or less in a laboratory bench-scale unit for an additional 30 days at 20 degrees Celsius. Vector attraction reduction is achieved if the bench scale digestion produces less than a 15 percent reduction in volatile solids content.
- (iv) The specific oxygen uptake rate (SOUR) for biosolids treated in an aerobic process must be equal to or less than 1.5 milligrams of oxygen per hour per gram of total solids (dry weight basis) at a temperature of 20 degrees Celsius.
- (v) Biosolids are treated by an aerobic process for a minimum of 14 consecutive days. Throughout that treatment time, the temperature of the biosolids must remain higher than 40 degrees Celsius and the average temperature of the biosolids must be higher than 45 degrees Celsius.

- (vi) The pH of the biosolids must be raised to 12 standard units or higher by alkali addition and, without the addition of more alkali, must remain at 12 standard units or higher for two hours and then remain at 11.5 standard units or higher for an additional 22 hours.
- (vii) For biosolids that do not contain untreated solids generated in a primary wastewater treatment process, the percent solids of the biosolids must be equal to or greater than 75 percent, prior to mixing with other materials, until land application.
 - (viii) For biosolids that contain untreated solids generated in a primary wastewater treatment process, the percent solids of the biosolids must be equal to or greater than 90 percent, prior to mixing with other materials, until land application.
- (ix) Biosolids must be injected below the surface of the land. No significant amount of biosolids may be present on the land surface within one hour after the biosolids are injected.
- (x) Biosolids must be incorporated into the soil within six hours after application on the land.

(3) The following site restrictions must be followed:

- (i) Public access to land with a high potential for public exposure must be restricted during land application and for at least one year after land application. Public access to land with a low potential for public exposure must be restricted during land application and for at least 30 days after application. Access must be controlled during that period by the use of posted signs. In sensitive areas, the Department may require the use of fences and gates or other appropriate means.
- (ii) Food crops with harvested parts that are totally above the land surface must not be harvested for 14 months after land application. Food crops with harvested parts below the surface of the land must not be harvested for 38 months after land application.
- (iii) Food crops grown above the soil with harvested parts that do not touch the biosolids/soil mixture, feed crops and fiber crops must not be harvested for at least 30 days after land application.
- (iv) Animals must not be grazed on the land for at least 30 days after land application.
- (v) Turf grown on land where biosolids are applied must not be harvested for one year after land application when the harvested turf will be placed on either land with a high potential for public exposure or a lawn.

Appendix 9-14

Analyses Required During Operation - Biosolids
(6 NYCRR 360-5.10 Table 6) [Added March 2004]

| Biosolids Used (Dry tons/year) | Minimum Number of Analyses | |
|-----------------------------------|----------------------------|---------|
| | Groups A & B | Group C |
| >1000 | 12 | 1 |
| 200 to 1000 | 6 | 1 |
| 25 to 199 | 4 | 1 |
| <25 | 2 | 0 |

SECTION 10

STORAGE TANK MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Storage Tank Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Aboveground Tank* - any stationary tank with a capacity of 185 gal or more that is not entirely covered with earth or other backfill material, or any stationary tank with a capacity of 180 gal or more which can be inspected in a subterranean vault (Codes, Rules, and Regulations of the State of New York, Title 6, Chapter V, Subchapter D, Part 596, Section 596.1 (6 NYCRR 596.1) [Revised January 1998].
- *Aboveground Tank* - any stationary tank which is not entirely covered with earth or other material, or any tank which can be inspected in a subterranean vault (6 NYCRR 612.1) [Added March 2005].
- *Ancillary Equipment* - any device including, but not limited to, hoses, piping, fittings, fixtures, gages, alarms, rupture disks, pressure release valves, flanges, or valves and pumps that are used to distribute, meter, or control the flow of a hazardous substance to and from a storage tank (6 NYCRR 596.1).
- *Assembly Line Tanks* - tanks used for the production of a manufactured product, such as dispensing vats, weigh tanks or volumetric measuring devices, metal cleaning dip tanks, electroplating tanks, and cutting fluid reservoirs (6 NYCRR 596.1) [Added January 1998].
- *Best Management Practice Plans* or *BMP's* - plans designed to prevent or minimize the release of hazardous substances into the environment. BMP's can include, but are not limited to, spill reporting procedures, risk identification and assessment, employee training, inspections and records, preventive maintenance, good housekeeping, materials compatibility, structural measures and security (6 NYCRR 596.1) [Added January 1998].
- *Bulk Storage Facility* - a site which has one or more storage tank systems (6 NYCRR 596.1) [Revised January 1998].
- *Capacity* - the total volume of the tank measured in U.S. gallons, unless otherwise specified (6 NYCRR 596.1).
- *Carrier* - a person who transports and transfers petroleum from one pipe or tank to another (6 NYCRR 612.1) [Added March 2005].
- *Cathodic Protection* - a technique to prevent corrosion of a metal surface by making that surface the cathode of an electrochemical cell. For example, a tank system can be cathodically protected through the application of either galvanic anodes or impressed current (6 NYCRR 596.1) [Added January 1998].
- *Cathodic Protection* - corrosion protection for an underground metal tank or pipe by causing a continuous electric current to flow from one or more electrodes or a sacrificial anode to the protected structure (6 NYCRR 612.1) [Added March 2005].
- *Change-In-Service* - the material stored within a tank is switched from a hazardous substance to a non-hazardous substance, a nonhazardous substance to a hazardous substance or from one hazardous substance to another (6 NYCRR 596.1) [Added January 1998].

- *Combined Storage Capacity* - the sum of the design storage capacity of each tank at a facility which has not been permanently closed (6 NYCRR 612.1).
- *Commissioner* - the Commissioner of Environmental Conservation or a duly authorized representative (6 NYCRR 364.1(c)).
- *Corrosion Resistant* (when referring to an underground tank) - any tank which meets standards for new underground tanks specified in section 614.3 of this Title. When referring to a pipe, it - any pipe which meets standards for new underground pipe specified in section 614.14 of this Title (6 NYCRR 612.1) [Added March 2005].
- *Container* - any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled (6 NYCRR 360-14.2).
- *Containment or To Contain* - all actions to limit or prevent the spread of a petroleum discharge (6 NYCRR 611.2).
- *Department* - the New York State Department of Environmental Conservation (6 NYCRR 596.1 and 612.1) [Citation Revised March 2005].
- *Discharge* - any intentional or unintentional action or omission resulting in the releasing, spilling, leaking, pumping, pouring, emitting, emptying, or dumping of petroleum into the waters of the state or onto lands from which it might flow or drain into said waters, or into waters outside the jurisdiction of the state when damage may result to the lands, waters, or natural resources within the jurisdiction of the state, excepting discharges pursuant to and in compliance with the conditions of a valid state or Federal permit (6 NYCRR 611.2 and 612.1) [Citation Revised March 2005].
- *Disposal* - the abandonment, discharge, deposit, injection, dumping, spilling, leaking, or placing of any waste or hazardous waste on or into any lands or waters of the state so that such waste or hazardous waste or any related constituent thereof may enter the environment or be emitted into the air or be discharged into any waters, including groundwaters thereof. Disposal also means the thermal destruction of waste or hazardous waste and the burning of such wastes as fuel for the purpose of recovering usable energy (6 NYCRR 364.1(c)).
- *Environment* - any water, water vapor, land including land surface or subsurface, air, fish, wildlife, biota, and all other natural resources (6 NYCRR 596.1).
- *Existing Facility* - a facility that has been constructed and is capable of being operated as of 26 January 1985 (6 NYCRR 612.1).
- *Existing Storage Tank*- a storage tank which has been constructed and is capable of being operated as of 11 August 1994 (6 NYCRR 596.1) [Revised January 1998].
- *Facility* - a site which has one or more storage tank systems (6 NYCRR 596.1) [Revised January 1998].
- *Facility or Storage Facility* - one or more stationary tanks, including any associated intra-facility pipelines, fixtures or other equipment, which have a combined storage capacity of over 1,100 gallons of petroleum at the same site. A facility may include aboveground tanks, underground tanks or a combination of both. Pipelines which enter or leave the site and nonstationary tanks are not part of the facility (6 NYCRR 612.1) [Added March 2005].
- *Flash point* - the temperature at which a liquid or volatile solid gives off vapor sufficient to form an ignitable mixture with air near the surface of the liquid or solid (6 NYCRR 596.1) [Revised January 1998].
- *Fuel Oil* - any virgin distillate oil, virgin residual oil, re-refined oil or a blend of these (6 NYCRR 225-2.2).

- *Handbook* - the New York State Water Quality Accident Contingency Plan and Handbook (6 NYCRR 611.3).
- *Hazardous Substance* - any substance listed as a hazardous substance in 6 NYCRR 597 (see also TEAM Guide Appendix 3-1) or a mixture thereof. Petroleum is not considered a hazardous waste under these requirements (6 NYCRR 595.1).
- *Incompatible* - those substances or materials which if allowed to come in contact, may pose an adverse environmental impact such as releasing a toxic gas or vapor, causing or intensifying a fire, creating an explosion, or causing any other adverse reaction which may threaten human health, safety, welfare or the environment (6 NYCRR 596.1) [Revised January 1998].
- *Leak Monitoring System* - a leak detection system as required in sections 614.5, 614.11 and 614.14(g)(3) of this Title (6 NYCRR 612.1) [Added March 2005].
- *Lining* - a coating of a non-corrodible material resistant to the product stored and bonded firmly to the interior surface of the tank (6 NYCRR 596.1 and 612.1) [Revised January 1998; Citation Revised March 2005].
- *Lubricating Oil* - all oil suitable for use as a lubricant, or solid for use as a lubricant (6 NYCRR 360-14.2).
- *Mixture* - a heterogeneous association of substances where the various individual substances retain their essential original properties. The term mixture includes solutions (but does not include alloys or amalgams) where one or more active ingredients are hazardous substances. Mixtures are regulated if they contain 1 percent or more by volume or weight of at least one hazardous substance (6 NYCRR 596.1).
- *New Facility* - a facility which is not an existing facility (6 NYCRR 612.1).
- *New Storage Tank* - a tank which is not an existing storage tank (6 NYCRR 596.1) [Revised January 1998].
- *Non-Stationary Tank* - any tank that in practice and design is mobile, including tanks on wheels, trolleys, skids, pallets, or rollers, and vessels such as a 55-gal drum (6 NYCRR 612.1).
- *Oil Production Facility* - all wells, flowlines, separation equipment, storage facilities, gathering lines and auxiliary nontransportation-related equipment used for the storage and handling of unrefined petroleum (6 NYCRR 612.1) [Added March 2005].
- *Operator* - any person who leases, operates, controls or supervises a facility (6 NYCRR 612.1) [Added March 2005].
- *Out-of-Service* - a facility or portion thereof no longer in use. Facilities or tanks that are used for seasonal storage, for surcharge storage, or for standby storage are not considered out-of-service (6 NYCRR 612.1).
- *Overfill* - a release or spill that occurs when a storage tank is filled beyond its capacity (6 NYCRR 595.1).
- *Owner* - any person who has legal or equitable title to a facility (6 NYCRR 612.1) [Added March 2005].
- *Permanently Closed* - an out-of-service storage tank or facility which has been closed in a manner prescribed by 6 NYCRR 613.9(b) (6 NYCRR 612.1).
- *Person* - any individual, public or private corporation, political subdivision, government agency, municipality, industry, copartnership, association, firm, trust, estate or any other legal entity (6 NYCRR 612.1) [Added March 2005].
- *Petroleum* - oil or petroleum of any kind and in any form including, but not limited to, oil, petroleum fuel oil, oil sludge, oil refuse, oil mixed with other waste, crude oil, gasoline, and kerosene (6 NYCRR 597.1).

- *Petroleum* - any petroleum-based oil of any kind which is liquid at 20°C under atmospheric pressure and has been refined, rerefined, or otherwise processed for the purpose of being burned as a fuel to produce heat or usable energy, or which is suitable for use as a motor fuel or lubricant in the operation or maintenance of an engine. Waste oil which has been reprocessed or rerefined and which is being stored for sale or use as fuel or lubricant is considered petroleum for purposes of this Part (6 NYCRR 612.1) [Added March 2005].
- *Piping or Piping System* - a fixed or permanent pipe including attached equipment and components used to convey, distribute, mix, separate, discharge, meter, control, or stop the flow of a hazardous substance to or from a storage tank (6 NYCRR 596.1).
- *Process Tank* - a vessel or other equipment used to mix or physically, chemically or biologically change a hazardous substance. The term process tank does not include tanks used to store hazardous substances prior to their introduction into the process, or tanks used to store substances as intermediates, by-products or finished products of the process. Examples of process tanks include, but are not limited to, flow-through chemical reactor tanks, batch tanks and mixing hoppers. Feed tanks upstream of the process are considered storage tanks for the purposes of this Part (6 NYCRR 596.1) [Revised January 1998].
- *Reconditioned* - any tank which is rehabilitated by installing an interior liner or which is permanently repaired in a manner prescribed by sections 614.6 and 614.12 of this Title (6 NYCRR 612.1) [Added March 2005].
- *Release* - any unauthorized pumping, pouring, emitting, emptying, overfilling, spilling, leaking, leaching, or disposing, directly or indirectly, of a hazardous substance or any other substance which results in the formation of a hazardous substance upon release so that the substance, or any related constituent thereof, or any degradation product of such a substance or of a related constituent thereof, may enter the environment (6 NYCRR 595.1).
- *Repair* - the work necessary to restore a storage tank or component to a safe and satisfactory operating condition provided that in all cases the storage tank or component design must continue to comply with the requirements herein, that special service requirements do not restrict such work, and the basic design concept is not altered (6 NYCRR 596.1).
- *Reportable Quantity* - the amount of a hazardous substance that must be reported to the Department in the event of a release, spill, or overflow. The reportable quantity for mixtures is the amount of the hazardous substance components of a mixture. Reportable quantities are listed in 6 NYCRR 597.2 (see also TEAM Guide Appendix 3-1) (6 NYCRR 595.1).
- *Secondary Containment* - a dike, remote impoundment, or any other containment area which protects a tank, pipe, or transfer station from damage due to vehicle traffic, fire exposure, spills from nearby tanks and which prevents any material spilled or released from reaching the land or water outside the containment area before clean-up occurs (6 NYCRR 596.1).
- *Secondary Containment* - containment which prevents any materials spilled or leaked from reaching the land or water outside the containment area before cleanup occurs (6 NYCRR 612.1) [Added March 2005].
- *Spill or Spillage* - any escape of a substance from the containers employed in the normal course of storage, transfer, processing, or use (6 NYCRR 595.1 and 612.1) [Citation Revised March 2005].
- *Stationary Tank* - all underground tanks or any aboveground storage tank (AST) which is nonmobile. Examples of stationary ASTs include tanks which may rest on the ground or may be fixed or permanently in place on foundations, racks, cradles, or stilts (6 NYCRR 612.1).
- *Storage Facility* - a site which has one or more storage tank systems (6 NYCRR 596.1) [Revised January 1998].

- *Storage Tank or Storage Tank System* - an aboveground tank, an underground tank or a non-stationary tank, and any associated piping, lines, dikes, curbs, transfer stations, and ancillary equipment (6 NYCRR 596.1) [Revised January 1998].
- *Substantially Modified Facility* - any existing facility which has been modified in one or more of the following ways: (6 NYCRR 612.1) [Added March 2005]
 - i. one or more new stationary tanks have been added;
 - ii. an existing stationary tank has been replaced, reconditioned or permanently closed; or
 - iii. a leaking storage tank has been replaced, repaired or permanently closed.
 The repair, replacement or installation of a piping system or other equipment does not substantially modify a facility.
- *Tank* - a container or other holding vessel designed to store a hazardous substance which is constructed of nonearthen materials (e.g., concrete, steel, plastic) which provide structural support (6 NYCRR 595.1).
- *Tightness Test* - a test which is performed in a manner consistent with the criteria set forth in section 613.5(a)(6) of this Title (6 NYCRR 612.1) [Added March 2005].
- *Transfer* - the movement of a hazardous substance between a storage tank and another tank or container, as contrasted to feeding to a use or application device (6 NYCRR 596.1).
- *Transfer Station* - an area where pipes or hoses are connected and disconnected for the purpose of emptying and filling a storage tank. This includes, but is not limited to, railways, roads, containment basins, curbs, collection sumps, and impervious pads, where a vehicle or container is located to off-load or receive a hazardous substance, where a coupling to a transfer line is made for the purpose of hazardous substance transfer, or where a system to collect and contain spills resulting from transfer operations is located (6 NYCRR 596.1).
- *Underground Storage Tank* - any tank or other vessel used for the storage of a hazardous substance which is completely covered with earth or other backfill material. Tanks in subterranean vaults accessible for visual inspection are considered aboveground tanks for the purposes of this section (6 NYCRR 596.1).
- *Underground Tank* - any tank completely covered with earth or other material. Tanks in subterranean vaults accessible for inspections are considered aboveground tanks for the purpose of this Part (6 NYCRR 612.1) [Added March 2005].
- *Unprotected Tank* - any underground tank which does not meet standards specified in section 614.3 of this Title. Examples of unprotected tanks include, but are not limited to, bare steel tanks; steel tanks which have been rehabilitated with an interior lining; steel tanks with exterior coatings of paint, asphalt, or other similar material; steel tanks which have been retrofitted with cathodic protection; and permeable concrete encased bare steel tanks (6 NYCRR 612.1) [Added March 2005].
- *Waters or Waters of the State* - include lakes, bays, sounds, ponds, impounding reservoirs, springs, wells, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic Ocean within the territorial limits of the State of New York, and all other bodies of surface or underground waters, natural or artificial inland or coastal, fresh or salt, public or private (except those private waters which do not combine or effect a junction with natural surface or underground waters), which are wholly or partially within or bordering the state or within its jurisdiction (6 NYCRR 596.1 and 612.1) [Citation Revised March 2005].
- *Working Capacity* - the total capacity of a storage tank less an allowance for expansion and freeboard (6 NYCRR 596.1 and 612.1) [Citation Revised March 2005].

REQUIREMENTS:**

**REVIEWER CHECKS:
March 2010**

ST.15.

**EMISSIONS/
DISCHARGES FROM POL
STORAGE VESSELS**

ST.15.1.NY. Gasoline dispensing sites must be equipped with vapor control equipment (6 NYCRR 230.2(a) through (e)).

(NOTE: This checklist item moved here from AE.55.1.NY.; January 1999.)

Verify that all storage tanks at gasoline dispensing sites with an annual throughput exceeding 120,000 gal are equipped with both of the following:

- a stage I vapor collection system consisting of a vapor-tight return line from the storage tank, or its vent, to the gasoline transport vehicle
- a properly installed onsite vapor control system connected to a vapor collection system, or an equivalent control system.

(NOTE: A stage I vapor collection system will not be required until 1 May 1999 for storage tanks that meet all of the following:

- are located at gasoline dispensing sites in the counties of New York, Bronx, Queens, or Richmond
- have a capacity less than 2000 gal
- were installed prior to 1 January 1970.)

Verify that all stationary gasoline storage tanks with a capacity of 250 gal or more located in the New York City metropolitan area are equipped with stage I vapor collection or control systems regardless of annual throughput.

(NOTE: Gasoline tanks with a capacity less than 550 gal used exclusively for farm tractors that are used for agricultural purposes or for snow plowing are exempt; however, these tanks must be equipped for submerged filling.)

Verify that gasoline dispensing sites located in Lower Orange Country or the New York City metropolitan area whose annual throughput exceeds 120,000 gal are equipped with a stage II vapor collection system that has been approved by the Department.

(NOTE: A stage II vapor collection system will not be required until 1 May 1999 for gasoline dispensing sites which were installed prior to 1 January 1970 in the counties of New York, Bronx, Kings, Queens, or Richmond.)

(NOTE: Approval of a stage II vapor collection system is based on a determination that a properly installed and operated system will remove at least 90 percent by weight of the gasoline vapors that are displaced or drawn from a vehicle fuel tank during refueling to a vapor-tight holding system or vapor control system.)

Verify that gasoline dispensing sites located in the Lower Orange County

SECTION 11

TOXIC SUBSTANCES MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Toxic Substances Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Abatement* - Any portion of an asbestos project that includes procedures to control fiber release from asbestos containing material. This includes removal, encapsulation, enclosure, repair, or handling of asbestos material that may result in the release of asbestos fiber (Title 12, New York Code of Rules and Regulations, Section 56-2.1 (12 NYCRR 56-2.1)) [Added March 2007].
- *Accepted Methods/Methodologies* - Procedures, regulations, or standards, which are published by recognized standards organizations (e.g. NIOSH, ASTM, ANSI), or are included within federal, state or local governmental regulations (e.g. OSHA, USEPA) (12 NYCRR 56-2.1) [Added March 2007].
- *Active Project* - A project becomes active when construction of the personal decontamination unit is required to be commenced, or when ACM, PACM or asbestos material is disturbed, whichever comes first, and is considered active until completion of Phase IID, unless, in response to a written request, permission is granted by the Department of Labor Engineering Services Unit to suspend the work on the project for a specified time period (12 NYCRR 56-2.1) [Added March 2007].
- *Additional Contractual Work* - Additional asbestos abatement work not originally included within the NYS DOL asbestos project notification (12 NYCRR 56-2.1) [Added March 2007].
- *Agricultural Building/Structure* - A building/structure which is or was used exclusively for agricultural or horticultural activity. This definition does not include converted structures or buildings currently used for residential purposes or the processing or retail merchandising of agricultural or horticultural commodities (12 NYCRR 56-2.1) [Added March 2007].
- *Airlock* - A system for permitting entrance and exit, while restricting air movement, between a contaminated area and an uncontaminated area (12 NYCRR 56-2.1) [Added March 2007].
- *Air Sampling* - The process of measuring the fiber content of a known volume of air collected during a specific period of time, using accepted methodologies (12 NYCRR 56-2.1) [Added March 2007].
- *Ambient Air Sampling* - A method of sampling by which an air sample is collected outside the regulated abatement work area, and is collected without the use of aggressive air sampling techniques (12 NYCRR 56-2.1) [Added March 2007].
- *Amended Water* - Water to which a surfactant has been added (12 NYCRR 56-2.1) [Added March 2007].
- *Approved Asbestos Safety Training Program* - A program, approved by the New York State Commissioner of Health, providing training in the various disciplines that may be involved in an asbestos project (12 NYCRR 56-2.1) [Added March 2007].

- *Asbestos* - Any naturally occurring hydrated mineral silicate separable into commercially usable fibers, including chrysotile (serpentine), amosite (cumingtonite-grunerite), crocidolite (riebeckite), tremolite, anthophyllite and actinolite (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Abatement Contractor* - An asbestos contractor who performs abatement during an asbestos project or employs persons performing such abatement (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Abatement Contractor Daily Project Log* - A bound daily narrative journal maintained by the asbestos abatement contractor, which contains a synopsis of all pertinent events that occur throughout Phase II of the asbestos project (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Containing Material (ACM)* - Any material containing greater than one percent (1 percent) of asbestos, also known as Asbestos Material (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Contractor* - The State, any political subdivision of the State, a public authority or any other governmental agency or instrumentality thereof, self-employed person, company, unincorporated association, firm, partnership or corporation and any owner or operator thereof, which engages in any portion of an asbestos project, or employs persons engaged in any portion of an asbestos project. Exception: Property owners or prime contractors who hire asbestos contractors, but do not, themselves, direct or control the work (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Control Bureau* - Asbestos Control Bureau, Division of Safety and Health, New York State Department of Labor (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Handler (Worker)* - Any person who performs the duties described in Section 56.3.2(d)(1) of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Handling Certificate* - A certificate issued by the Commissioner in any of the categories set forth in Section 56-3.2(d) of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Handling License* - A license issued by the Commissioner pursuant to Section 56-3.1 of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Material* - Any material containing greater than one percent (1 percent) of asbestos, also known as Asbestos Containing Material (ACM) (12 NYCRR 56-2.1) [Added March 2007].
- *Asbestos Project* - Work that involves the removal, encapsulation, enclosure, repair or disturbance of friable or non-friable asbestos, or any handling of asbestos material that may result in the release of asbestos fibers. For the purpose of compliance with this Part, an asbestos project shall include any disturbance of asbestos fibers, and the planning, asbestos survey (as per Subpart 56-5.1), design, background air sampling, inspection, air sampling and oversight of abatement work, cleanup, and the handling of all asbestos material subject to abatement, as well as the supervising of such activities. Installation of friable ACM shall also be considered an asbestos project. An asbestos project starts with Phase I when the planning, asbestos survey, and design work begins or is required to begin. The project shall not be considered completed until Phase II D is complete. (See Table 1 Below) (12 NYCRR 56-2.1) [Added March 2007]:

**Table 1
ASBESTOS PROJECT PHASES OF WORK**

| Phase I | | Phase II | | | |
|--|-------------------------|---|---|--|-------------------------------|
| (Prior to Asbestos Abatement Contractor Mobilization) Pre-Abatement | | Start-----Abatement-----End | | | |
| A | B | A | B | C | D |
| Asbestos Survey, Planning & Design | Background Air Sampling | Regulated Abatement Work Area(s) Preparation & Enclosure Construction | Asbestos Handling including, Gross Removal or Abatement, Initial Cleans and Waste Removal | Final Cleaning & Clearance Air Samples | Final Waste Removal From Site |
| Start-----Asbestos Project-----End | | | | | |

- (1) Where any work is subcontracted, only that part of the work involving asbestos shall be deemed to be an asbestos project.
 - (2) Asbestos projects include Large asbestos projects, Small asbestos projects, Minor asbestos projects, incidental disturbance asbestos projects and emergency projects as defined elsewhere in this Part. For purposes of licensing, certification, notification, air sampling and asbestos survey requirements, asbestos projects shall include in-plant operations.
 - (i) Large asbestos project. An asbestos project involving the removal, disturbance, enclosure, encapsulation, repair or handling of 160 square feet or more of ACM, PACM or asbestos material or 260 linear feet or more of ACM, PACM or asbestos material.
 - Small asbestos project. An asbestos project involving the removal, encapsulation, enclosure, repair, disturbance or any handling of more than 10 and less than 160 square feet of ACM, PACM or asbestos material or more than 25 and less than 260 linear feet of ACM, PACM or asbestos material.
 - (iii) Minor asbestos project. An asbestos project involving the removal, disturbance, repair, encapsulation, enclosure or handling of 10 square feet or less of ACM, PACM or asbestos material, or 25 linear feet or less of ACM, PACM or asbestos material.
- *Asbestos Project Air Sampling Technician* - An individual who performs the duties described in Section 56-3.2(d)(3) of this Part (12 NYCRR 56-2.1) [Added March 2007].
 - *Asbestos Survey* - A thorough inspection for and identification of all PACM, suspect ACM, or asbestos material throughout the building/structure or portion thereof to be demolished, renovated, remodeled, or repaired. (See Subpart 56-5) (12 NYCRR 56-2.1) [Added March 2007].
 - *Asbestos Waste* - ACM, PACM, asbestos material or asbestos contaminated objects requiring disposal pursuant to applicable laws or regulations. This includes RACM as well as Category I and II Non-Friable ACM (12 NYCRR 56-2.1) [Added March 2007].
 - *Authorized Visitor* - Any party on an asbestos project, who has to enter the asbestos project restricted area or regulated abatement work area for emergency purposes or regulatory compliance inspections. Examples include the building/structure owner, his or her agent or representative, utility company representatives, the Commissioner or his or her agents, and personnel of any regulatory agency having jurisdiction over the project. Visitors shall comply with all applicable requirements of OSHA 29 CFR 1926 (12 NYCRR 56-2.1) [Added March 2007].

- *Background Air Sampling* - A method used to determine airborne fiber concentrations in the area where abatement work is to be conducted, prior to starting Phase II A of the asbestos project (12 NYCRR 56-2.1) [Added March 2007].
- *Barriers* - Critical Barriers and Isolation Barriers (12 NYCRR 56-2.1) [Added March 2007].
- *Building/Structure* - A structure wholly or partially enclosed within exterior walls and a roof, intended to afford shelter to persons, animals or property; or a structure used as a conveyance for utilities, vehicular traffic or pedestrians (e.g. bridge, tunnel, manhole, subsurface conduits) (12 NYCRR 56-2.1) [Added March 2007].
- *Building/Structure Owner* - The State, any political subdivision of the State, a public authority or any other governmental agency or instrumentality thereof, person, company, unincorporated association, firm, partnership or corporation in whom legal title to the premises is vested unless the premises are held in land trust, in which instance building/structure owner means the person in whom beneficial title is vested (12 NYCRR 56-2.1) [Added March 2007].
- *Building/Structure Owner's Authorized Representative* - A licensed asbestos contractor firm contractually responsible for execution of any building owner's responsibility, as required by this Part, during any phase of an asbestos project at the building owner's building/structure (12 NYCRR 56-2.1) [Added March 2007].
- *Bulk Sampling* - Accepted methods for collecting samples of suspect materials for appropriate analyses by NYS ELAP approved laboratories, to determine asbestos content (12 NYCRR 56-2.1) [Added March 2007].
- *Category I Non-Friable ACM* - NESHAP classification-Asbestos-containing packings, gaskets, resilient floor covering, and asphalt roofing products, containing more than one percent (1 percent) asbestos, that when dry, can not be crumbled, pulverized, or reduced to powder by hand pressure (12 NYCRR 56-2.1) [Added March 2007].
- *Category II Non-Friable ACM* - NESHAP classification-Any material, excluding Category I Non-Friable ACM, containing more than one percent (1 percent) asbestos, that when dry, can not be crumbled, pulverized, or reduced to powder by hand pressure (12 NYCRR 56-2.1) [Added March 2007].
- *Class I Asbestos Work* - OSHA term meaning activities involving the abatement of Thermal Systems Insulation (TSI), and surfacing ACM and PACM (12 NYCRR 56-2.1) [Added March 2007].
- *Class II Asbestos Work* - OSHA term meaning activities involving the abatement of ACM which is not TSI or surfacing material. This includes, but is not limited to, the removal of asbestos-containing wallboard, floor tile and sheeting, roofing and siding shingles, and construction mastics (12 NYCRR 56-2.1) [Added March 2007].
- *Class III Asbestos Work* - OSHA term meaning Repair and Maintenance operations, where no more than a minor quantity of ACM, including TSI and surfacing ACM and PACM, is likely to be disturbed (12 NYCRR 56-2.1) [Added March 2007].
- *Class IV Asbestos Work* - OSHA term meaning Maintenance and Custodial Activities during which employees contact but do not disturb ACM or PACM and activities to clean up non-ACM dust, waste and debris resulting from Class I, II and III activities (12 NYCRR 56-2.1) [Added March 2007].
- *Clean Room* - An uncontaminated area or room, which is a part of the personal decontamination enclosure, with provisions for storage and changing of persons' street clothes and protective equipment (12 NYCRR 56-2.1) [Added March 2007].
- *Cleanup* - The utilization of HEPA-vacuuming or wet cleaning or both to control and eliminate accumulations of asbestos material and asbestos waste material (12 NYCRR 56-2.1) [Added March 2007].

- *Commissioner* - The Commissioner of the New York State Department of Labor (12 NYCRR 56-2.1) [Added March 2007].
- *Containment* - The negative-pressurized enclosure within the restricted area, which establishes the regulated abatement work area and surrounds the location where the asbestos abatement is actually taking place (12 NYCRR 56-2.1) [Added March 2007].
- *Decontamination System Enclosure* - A series of connected rooms, usually attached to the regulated abatement work area, for the decontamination of persons, materials and equipment (12 NYCRR 56-2.1) [Added March 2007].
- *Demolition* - The wrecking or removal of any load-supporting structural member of a building or structure (12 NYCRR 56-2.1) [Added March 2007].
- *Department* - The New York State Department of Labor (12 NYCRR 56-2.1) [Added March 2007].
- *Disturbance* - Any activities that disrupt the matrix of ACM or PACM, or generate debris, visible emissions or airborne asbestos fibers from ACM or PACM. This includes moving of friable asbestos containing material from one place to another (12 NYCRR 56-2.1) [Added March 2007].
- *Emergency* - An unexpected, unanticipated or unforeseen occurrence, including but not limited to, a steam, chemical, gas or water line rupture, a boiler failure, a building/structure collapse, or act of nature which may pose (12 NYCRR 56-2.1) [Added March 2007]:
 - (1) an imminent danger to the health and safety of the public; or
 - (2) an asbestos-related risk to the health and safety of the public from release of asbestos fibers.
- *Emergency Asbestos Project* - An asbestos project which is necessary to respond to an emergency (12 NYCRR 56-2.1) [Added March 2007].
- *Encapsulant (Sealant) or Encapsulating Agent* - A liquid material, which can be applied to asbestos material and which prevents the release of asbestos fibers from the material either by creating a membrane over the surface (bridging encapsulant) or by penetrating into the material and binding its components together and to the substrate (penetrating encapsulant). See Sealant (12 NYCRR 56-2.1) [Added March 2007].
- *Encapsulation* - Abatement consisting of the coating or spraying of asbestos material with an encapsulant (sealant) or encapsulating agent (12 NYCRR 56-2.1) [Added March 2007].
- *Enclosure* - Abatement consisting of the construction of airtight walls, ceilings and floors between the asbestos material and the building/structure environment, or around surfaces coated with asbestos material, or any other appropriate procedure as determined by the Department, which prevents the release of asbestos fibers (12 NYCRR 56-2.1) [Added March 2007].
- *EPA* - The United States Environmental Protection Agency (12 NYCRR 56-2.1) [Added March 2007].
- *Equipment Room* - A contained area or room which is part of the personal decontamination system enclosure with provisions for the storage of contaminated clothing and equipment (12 NYCRR 56-2.1) [Added March 2007].
- *Fiber (Asbestos Fiber)* - Generally, a slender or elongated structure, which results from the break up of ACM, PACM or asbestos material. However, the definition of an asbestos fiber is also dependent upon the approved accepted method of air sampling and analysis utilized for the specific phase of the asbestos project (12 NYCRR 56-2.1) [Added March 2007].
- *Fixed Object* - Equipment, furniture or other item that is affixed, as a whole, to a floor, ceiling, wall or other building structure or system (12 NYCRR 56-2.1) [Added March 2007].

- *Friable* - Any material that when dry, can be crumbled, pulverized, or reduced to powder by hand pressure, or is capable of being released into the air by hand pressure (12 NYCRR 56-2.1) [Added March 2007].
- *Glovebag* - A manufactured impervious bag-like enclosure constructed of at least six (6) mil transparent plastic, seamless at the bottom, with inward-projecting long sleeve glove(s), which may also contain an inward-projecting water-wand sleeve, an internal tool pouch, and an attached, labeled receptacle or portion for asbestos waste. The glovebag is constructed and installed to surround the object or area to be decontaminated and contain all asbestos fibers released during the abatement process (12 NYCRR 56-2.1) [Added March 2007].
- *Glovebag Technique* - A method for removing asbestos material from heating, ventilating, and air conditioning (HVAC) ducts, piping runs, valves, joints and elbows, and other non-planar surfaces, by use of a glovebag (12 NYCRR 56-2.1) [Added March 2007].
- *Glue* - A material used as an adhesive, such as the material used to hold tiles to a surface. See Mastic (12 NYCRR 56-2.1) [Added March 2007].
- *HEPA-Filter* - A high efficiency particulate air filter capable of trapping and retaining 99.97 percent of all mono-dispersed particles of 0.3 microns in diameter or larger (12 NYCRR 56-2.1) [Added March 2007].
- *HEPA-Vacuum Equipment* - Vacuuming equipment designed for abatement, with a high efficiency particulate air filtration system (12 NYCRR 56-2.1) [Added March 2007].
- *Holding Area* - A chamber in the waste decontamination enclosure utilized for temporary storage of containerized ACM waste, prior to transfer to waste transport vehicle (12 NYCRR 56-2.1) [Added March 2007].
- *Incidental Disturbance* - The unintentional disturbance of, ACM, PACM, or asbestos material (12 NYCRR 56-2.1) [Added March 2007].
- *Incidental Disturbance Asbestos Project* - The cleanup, repair or encapsulation of less than 10 square feet or less than 25 linear feet of incidentally disturbed ACM, PACM or asbestos material (12 NYCRR 56-2.1) [Added March 2007].
- *Inspector* - Any person who performs the duties described at Section 56-3.2(d)(4) of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Intact* - Asbestos material that has not crumbled, been pulverized, or otherwise been damaged or disturbed, and the material's matrix has not noticeably deteriorated (12 NYCRR 56-2.1) [Added March 2007].
- *Intermediate Portions of a Project* - The discrete abatement segments that will take place where non-continuous interim notifications are required, as per Section 56-3.4(b)(4)(v), for large asbestos projects (12 NYCRR 56-2.1) [Added March 2007].
- *Isolation Barriers* - Installed temporary hardwall barriers that complete the containment enclosure and establish the regulated abatement work area (12 NYCRR 56-2.1) [Added March 2007].
- *Lockdown Encapsulant* - A thinned out bridging encapsulant used for lockdown purposes to assist with cleanup as per this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Management Planner* - Any person who performs the duties described at Section 56-3.2 (d) (9) of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Mastic* - A pasty material used as an adhesive (12 NYCRR 56-2.1) [Added March 2007].

- *Mounted Object* - Equipment, furniture, or other item that is attached, in whole or in part, to a floor, ceiling, wall or other building structure or system or to a fixed object (12 NYCRR 56-2.1) [Added March 2007].
- *Movable Object* - Equipment, furniture or other item that is not attached or affixed, in whole or in part, to a floor, ceiling, wall or other building structure or system or to a fixed object (12 NYCRR 56-2.1) [Added March 2007].
- *Multi-employer Work Sites* - Any demolition, renovation, remodeling or repair project work site, which includes work covered by this part, where more than one employer is reasonably expected to be on-site during the project (12 NYCRR 56-2.1) [Added March 2007].
- *Multiple Abatement* - The abatement of more than one type of ACM within the same containment (12 NYCRR 56-2.1) [Added March 2007].
- *Negative Air Pressure Equipment* - A local exhaust system, capable of maintaining air pressure within a containment at a lower pressure than the air pressure outside of such containment, and which provides for HEPA filtration of all air exhausted from the containment (12 NYCRR 56-2.1) [Added March 2007].
- *NESHAP* - National Emission Standards for Hazardous Air Pollutants (40 CFR Part 61) (12 NYCRR 56-2.1) [Added March 2007].
- *NIOSH* - The National Institute for Occupational Safety and Health (12 NYCRR 56-2.1) [Added March 2007].
- *Non-Asbestos Material* - Any material documented to contain one percent (1 percent) or less of asbestos (12 NYCRR 56-2.1) [Added March 2007].
- *Non-Friable* - Any material that when dry, can not be crumbled, pulverized, or reduced to powder by hand pressure, and is not capable of being released into the air by hand pressure (12 NYCRR 56-2.1) [Added March 2007].
- *Non-Friable Organically Bound (NOB) Asbestos Material* - Non-friable asbestos materials embedded in flexible-to-rigid asphalt or vinyl matrices, including but not limited to flooring materials, adhesives, mastics, asphalt shingles, roofing materials and caulks (12 NYCRR 56-2.1) [Added March 2007].
- *Occupied Area* - Any frequented portion of the work site where abatement is not taking place (12 NYCRR 56-2.1) [Added March 2007].
- *Operations and Maintenance Worker* - Any person who performs the duties described at Section 56-3.2 (d) (5) of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *OSHA* - The Occupational Safety and Health Administration (12 NYCRR 56-2.1) [Added March 2007].
- *Outside Air* - The air immediately outside the building or structure in which an asbestos project is performed (12 NYCRR 56-2.1) [Added March 2007].
- *Person* - Any natural person (12 NYCRR 56-2.1) [Added March 2007].
- *Personal Air Sampling* - Air sampling located in a worker's breathing zone (12 NYCRR 56-2.1) [Added March 2007].
- *Personal Decontamination System Enclosure* - An area designated for controlled passage of all persons to and from the regulated abatement work area (12 NYCRR 56-2.1) [Added March 2007].

- *Personal Protective Equipment (PPE)* - Disposable work suits or coveralls, head covering, eye protection, footwear, gloves and appropriate NIOSH-approved respirators with appropriate NIOSH-approved filters (12 NYCRR 56-2.1) [Added March 2007].
- *Plasticize* - To cover floors, walls, ceilings or other surfaces with 6-mil fire-retardant plastic sheeting (12 NYCRR 56-2.1) [Added March 2007].
- *Presumed Asbestos Containing Material (PACM)* - All Thermal System Insulations and Surfacing Materials found in buildings constructed no later than 1980. PACM is considered to be ACM unless proven otherwise by appropriate bulk sampling and laboratory analyses (12 NYCRR 56-2.1) [Added March 2007].
- *Project Air Sampling* - Area air sampling conducted in accordance with Subpart 56-4 of this Part during the course of the asbestos project (12 NYCRR 56-2.1) [Added March 2007].
- *Project Designer* - Any person who performs the duties described at Section 56-3.2(d)(7) of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Project Monitor* - Any person who performs the duties described at Section 56-3.2(d)(8) (12 NYCRR 56-2.1) [Added March 2007].
- *Public* - Any natural person except (12 NYCRR 56-2.1) [Added March 2007]:
 - (1) A person engaged in an asbestos project
 - (2) An authorized visitor
 - (3) Police, fire, or other public safety personnel.
- *Receptor* - Any opening, which could admit asbestos fibers into a structure if not properly protected. Examples include but are not limited to operable windows, doors, vents, air intakes or exhausts of any mechanical device within a building or structure (12 NYCRR 56-2.1) [Added March 2007].
- *Regulated Abatement Work Area* - The portion of the restricted area where abatement work actually occurs. For tent work areas, the interior of each tent is a regulated abatement work area. For OSHA Class I and Class II asbestos abatement, the interior of the restricted area containment enclosure is the regulated abatement work area. For exterior non-friable asbestos abatement conducted without the establishment of negative air ventilation systems or containment enclosures, the entire restricted area surrounding the abatement location is considered to be the regulated abatement work area (12 NYCRR 56-2.1) [Added March 2007].
- *Regulated Asbestos-Containing Material (RACM)* - Friable ACM or PACM, Category I Non-friable ACM that has become friable or has been or will be subjected to sanding, grinding, cutting or abrading, or Category II Non-friable ACM that has a high probability of becoming or has become crumbled, pulverized, or reduced to powder by the forces expected to act on the material in the course of demolition or renovation operations (12 NYCRR 56-2.1) [Added March 2007].
- *Remodel* - For purposes of this code, remodel shall mean the same as renovation (12 NYCRR 56-2.1) [Added March 2007].
- *Remote Decontamination System Enclosure* - Decontamination systems that are not attached to the regulated abatement work area but are within the work site (12 NYCRR 56-2.1) [Added March 2007].
- *Removal* - Abatement, consisting of operations where ACM, PACM or asbestos material is removed or stripped from structures or substrates. This includes demolition operations (12 NYCRR 56-2.1) [Added March 2007].
- *Renovation* - The altering of an existing building/structure, or a portion of building/structure components or systems, including the stripping, removal or abatement of ACM from a building or structure. Operations in which load-supporting structural members are wrecked or taken out are demolitions (12 NYCRR 56-2.1) [Added March 2007].

- *Repair (Asbestos)* - Abatement, consisting of corrective action for a Minor Asbestos Project using required work practices to control fiber release from damaged ACM, PACM or asbestos material (12 NYCRR 56-2.1) [Added March 2007].
- *Repair* - The replacement, overhaul, rebuilding, reconstructing or reconditioning of any part of a building/structure component or system with like or similar material or parts, due to damage or excessive wear (12 NYCRR 56-2.1) [Added March 2007].
- *Respiratory Protection* - NIOSH-approved respirators with appropriate NIOSH-approved filters (12 NYCRR 56-2.1) [Added March 2007].
- *Restricted Area* - A restricted area established and marked for the abatement portion of an asbestos project. This area shall include, but not be limited to asbestos project regulated abatement work areas and any contiguous decontamination facilities, adjoining staging areas where work materials, debris or waste from such work may accumulate, remote decontamination areas, and waste storage areas (dumpsters, trailers, etc.) (12 NYCRR 56-2.1) [Added March 2007].
- *Restricted Asbestos Handler (Allied Trades)* - Any person who performs the duties described at Section 56-3.2 (d) (2) of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Sequential Abatement* - The abatement of different types of asbestos containing material within a common regulated abatement work area in a priority order. (See Section 56-8.6) (12 NYCRR 56-2.1) [Added March 2007].
- *Supervisor* - Any person who performs the duties described at Section 56-3.2 (d) (6) of this Part (12 NYCRR 56-2.1) [Added March 2007].
- *Suspect Miscellaneous ACM* - Any suspect asbestos-containing material that is not PACM, such as floor tiles, ceiling tiles, mastics/adhesives, sealants, roofing materials, cementitious materials, etc. A listing of typical suspect miscellaneous ACM can be found in Subpart 56-5. All suspect miscellaneous ACM must be assumed to be ACM, unless proven otherwise by appropriate bulk sampling and laboratory analyses (12 NYCRR 56-2.1) [Added March 2007].
- *Surfacing Material* - Material that is sprayed-on, troweled-on, or otherwise applied to surfaces (such as acoustical or finish plaster on ceilings and walls, and fireproofing materials on structural members, or other materials on surfaces for acoustical, fireproofing, or other purposes) (12 NYCRR 56-2.1) [Added March 2007].
- *Variance (Site-specific)* - Relief in accordance with Section 30 of the Labor Law from specific sections of Industrial Code Rule 56 for a specific project (12 NYCRR 56-2.1) [Added March 2007].
- *Variance (Applicable) (AV)* - Blanket relief in accordance with Section 30 of the Labor Law from specific sections of Industrial Code Rule 56 for a particular type of project (12 NYCRR 56-2.1) [Added March 2007].
- *Visible Emission* - Any emission of particulate material that can be seen without the aid of instruments (12 NYCRR 56-2.1) [Added March 2007].
- *Washroom* - A room between the regulated abatement work area and the holding area in the waste decontamination system enclosure, where equipment and waste containers are wet cleaned or HEPA-vacuumed (12 NYCRR 56-2.1) [Added March 2007].
- *Work Site* - Building, structure, parcel of land or premises where an asbestos project takes place (12 NYCRR 56-2.1) [Added March 2007].

**TOXIC SUBSTANCES MANAGEMENT
GUIDANCE FOR NEW YORK CHECKLIST USERS**

REFER TO CHECKLIST ITEMS:

PCB Management

Many types of PCBs and PCB equipment are regulated as hazardous wastes in New York. See the Hazardous Waste Management section for details.

Missing Checklist Items T1.2.1.NY.

Asbestos Management

State Requirements T2.1.1.NY.

Missing Checklist Items T2.2.1.NY.

Renovation and Demolition T2.5.1.NY. through T2.5.7.NY.

Personnel Training T2.10.1.NY.

Asbestos Disposal T2.15.1.NY.

Radon Management

Refer to the U.S. TEAM Guide and the DOD Component Supplements for DOD and service-specific requirements.

Missing Checklist Items T3.2.1.NY.

Lead-Based Paint Management

Refer to the U.S. TEAM Guide and the DOD Component Supplements for DOD and service-specific requirements.

Missing Checklist Items T4.2.1.NY.

SECTION 12

WASTEWATER MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Wastewater Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Amalgam Separator* - a type of dental equipment designed to remove dental amalgam particles from the wastewater of a dental facility and meeting the standards specified in subdivision 374-4.2(a) of this Subpart (6 NYCRR 374-4.1) [Added March 2007].
- *Assistant/Shift Operator* - an individual who is employed or appointed by any county, city, village, town, district, or by any state department, agency, or authority, or by any sewer company, corporation, person, or group of persons, or by any industry or institution, and who is designated by the appointing officials as a person who, under the direction of the chief operator, is in responsible supervision of the complete and actual operation of a wastewater treatment plant during a shift or in the absence of the chief operator (Codes, Rules, and Regulations of the State of New York, Title 6, Chapter X, Subchapter A, Part 650, Section 650.2 (6 NYCRR 650.2)).
- *Animal Feeding Operation* - a lot or facility (other than an aquatic animal production facility) where animals have been, are, or will be stabled or confined and fed or maintained for a total of 45 days or more in any 12-month period, and the animal confinement areas do not sustain crops, vegetation, forage growth, or post-harvest residues in the normal growing season. Two or more animal feeding operations under common ownership are a single animal feeding operation if they physically adjoin each other, or if they use a common area or system for the disposal of wastes (6 NYCRR 750-1.2) [Added March 2004].
- *Banks* - that land area immediately adjacent to, and which slopes toward, the bed of a watercourse, and which is necessary to maintain the integrity of a watercourse. For purposes of this section, a bank will not be considered to extend more than 50 ft horizontally from the mean high water line; with the following exception: where a generally uniform slope of 45 degrees (100 percent) or greater adjoins the bed of the watercourse, the bank is extended to the crest of the slope or the first definable break in slope, either a natural or constructed (i.e., road or railroad grade) feature, lying generally parallel to the watercourse (6 NYCRR 608.1).
- *Bed* - the land area of a watercourse covered by water at mean high water (6 NYCRR 608.1).
- *Biosolids*- dewatered treatment residuals that meet federal regulations (40 CFR Part 501 - see section 750-1.24 of this Part) and state regulations (Part 360 of this Title) and local rules for reuse concerning metals, pathogens, and vector attraction reduction (6 NYCRR 750-1.2) [Added March 2004].
- *Bypass* - the intentional or unintentional diversion of wastewater or stormwater around any portion of a treatment facility having the effect of reducing the degree of treatment designed for the bypassed portion of the treatment facility (6 NYCRR 750-1.2) [Added March 2004].
- *Chief Operator* - an individual who is employed or appointed by any county, city, village, town, district, or by any state department, agency, or authority, or by any sewer company, corporation, person or group of persons, or by any industry or institution, and who is designated by the appointing officials as the person in responsible supervision of the complete and actual operation of any wastewater treatment plant. It is not intended to include

city managers, superintendents of public works, or municipal or other officials unless their duties include the actual operation of a wastewater treatment plant (6 NYCRR 650.2).

- *Coastal Waters* - those marine waters within the territorial limits of the state other than estuaries and enclosed bays. Long Island Sound is designated as coastal waters for the purposes of thermal discharges (6 NYCRR 700.1).
- *Commissioner* - the Commissioner of Environmental Conservation or a duly authorized representative (6 NYCRR 364.1(c)).
- *Contiguous Zone* - the entire zone established or to be established by the United States under article 24 of the Convention of the Territorial Sea and the contiguous zone (6 NYCRR 750-1.2) [Citation Revised March 2004].
- *Dental Amalgam* - an alloy which contains mercury and other metals used in the practice of dentistry (6 NYCRR 374-4.1) [Added March 2007].
- *Dental Amalgam Waste* - waste from a dental facility containing (6 NYCRR 374-4.1) [Added March 2007]:
 - (i) Dental amalgam that has been in contact with the patient including, but not limited to: extracted teeth with dental amalgam restorations, carving scrap collected at chair-side, dental amalgam captured by chair-side traps, vacuum pump filters, amalgam separators, or other dental amalgam capture devices
 - (ii) Dental amalgam that has not been in contact with the patient including, but not limited to: excess dental amalgam mix and the used pre-encapsulated dental amalgam capsules remaining at the end of a dental procedure
 - (iii) Dental amalgam that may have accumulated in the plumbing system of a dental facility.
- *Dental Facility* - any institution, clinic, office or other location where the practice of dentistry is performed (6 NYCRR 374-4.1) [Added March 2007].
- *Department* - the New York State Department of Environmental Conservation (6 NYCRR 364.1(c)).
- *Discharge* - any addition of any pollutant to state waters, waters of the contiguous zone, or the ocean through an outlet or point source (6 NYCRR 750-1.2) [Citation Revised March 2004].
- *Discharge Monitoring Report (DMR)* - a report submitted by a permittee to the department summarizing the effluent monitoring results obtained by the permittee over periods of time as specified in the SPDES permit (6 NYCRR 750-1.2) [Added March 2004].
- *Disposal System* - a system for disposing of sewage, stormwater, industrial waste or other wastes, including sewer systems and treatment works(6 NYCRR 750-1.2) [Added March 2004].
- *Disposal* - the abandonment, discharge, deposit, injection, dumping, spilling, leaking, or placing of any waste or hazardous waste on or into any lands or waters of the state so that such waste or hazardous waste or any related constituent thereof may enter the environment or be emitted into the air or be discharged into any waters, including groundwaters thereof. Disposal also means the thermal destruction of waste or hazardous waste and the burning of such wastes as fuel for the purpose of recovering usable energy (6 NYCRR 364.1(c)).
- *Disposal System* - a system for disposing of sewage, industrial waste, or other wastes, including sewer systems and treatment works (6 NYCRR 700.1).
- *Effluent Limitations* - any restriction on quantities, qualities, rates and concentrations of chemical, physical, biological, and other constituents of effluents that are discharged into or allowed to run from an outlet or point source, or any other discharge within the meaning of section 17-0501 of the Environmental Conservation Law into surface waters, groundwater, or unsaturated zones (6 NYCRR 700.1).

- *ELAP Identification Number* - the number assigned to a certified laboratory by the New York State Health Department (6 NYCRR 750-1.2) [Added March 2004].
- *Elemental Mercury* - a heavy, silvery-white metal that is liquid at room temperature and is represented by the chemical symbol "Hg" with an atomic number of 80 and an atomic mass of 200.59 (6 NYCRR 374-4.1) [Added March 2007].
- *Enclosed Bays* - those marine waters within the territorial limits of New York State, other than coastal waters or estuaries, in which exchange of sea water is severely limited by barrier beaches. For the purpose of thermal discharges, the following are designated as enclosed bays: Jamaica Bay, Hempstead Bay, Great South Bay, Moriches Bay, Shinnecock Bay, and Mecox Bay (6 NYCRR 700.1) [Citation Revised March 2008].
- *Estuary* - the tidal portion of a river or stream (6 NYCRR 700.1) [Citation Revised March 2008].
- *General SPDES Permit* - a SPDES permit issued pursuant to section 750-1.21 of this Part authorizing a category of discharges (6 NYCRR 750-1.2) [Added March 2004; Citation Revised March 2008].
- *Groundwaters* - those waters in saturated zones (6 NYCRR 700.1) [Citation Revised March 2008].
- *Guidance Value* - such measure of purity or quality for any waters in relation to their reasonable and necessary use as may be established by the Department pursuant to section 702.1 of 6 NYCRR (6 NYCRR 700.1) [Citation Revised March 2008].
- *Individual Sewage Treatment System* - a facility serving one or more parcels of land or residential households and treating sewage or other liquid wastes for discharge into the groundwater of the state, except where a permit for such a facility is required under the applicable provisions of Article 17 of the *Environmental Conservation Law* (Codes, Rules, and Regulations of the State of New York, Title 10, Chapter II, Subchapter I, Part 75, Section 75.3 (10 NYCRR 75.3)).
- *Individual SPDES Permit* - a SPDES permit issued to a single facility in one location in accordance with this Part (as distinguished from a general SPDES permit) (6 NYCRR 750-1.2) [Added March 2004].
- *Industrial-Commercial Waste* - any solid waste which originates at, is generated by, or occurs as a result of any industrial or commercial activity. Industrial-commercial wastes are exemplified by, but not limited to (6 NYCRR 364.1(d)(4)):
 1. liquids such as:
 - a. acids, alkalis, caustics, leachate, petroleum (and its derivatives), and process or treatment wastewaters
 - b. sludges, which are semisolid substances resulting from process or treatment operations or residues from storage or use of liquids
 2. solids such as:
 - a. solidified chemicals, paints, or pigments
 - b. dredge spoil, foundry sand, and the end or byproducts of incineration or other forms of combustion, including bottom ash and fly ash
 3. contained gaseous materials
 4. hazardous waste
 5. any liquid, sludge, septage, solid, semisolid substance or contained gaseous material in which any of the foregoing is intermixed or absorbed, or onto which any of the foregoing is adhered.
- *Large Dental Facility* - an institution which houses fifty (50) or more dental chairs (6 NYCRR 374-4.1) [Added March 2007].
- *Mean Low Water or Mean High Water* - respectively, the approximate average low water level or high water level for a given body of water at a given location, that distinguishes between predominantly aquatic and predominantly terrestrial habitat as determined, in order of use, by the following (6 NYCRR 608.1):

1. available hydrologic data, calculations, and other relevant information concerning water levels (e.g., discharge, storage, tidal, and other recurrent water elevation data); (mean high water elevations are established, using this method, for certain waterbodies as presented in 6 NYCRR 608.11)
 2. vegetative characteristics (e.g., location, presence, absence, or destruction of terrestrial or aquatic vegetation)
 3. physical characteristics (e.g., clear natural line impressed on a bank, scouring, shelving, or the presence of sediments, litter, or debris)
 4. other appropriate means that consider the characteristics of the surrounding area.
- *Navigable Waters of the State* - all lakes, rivers, streams, and other bodies of water in the state that are navigable in fact or upon which vessels with a capacity of one or more persons can be operated notwithstanding interruptions to navigation by artificial structures, shallows, rapids, or other obstructions, or by seasonal variations in capacity to support navigation. It does not include waters that are surrounded by land held in single private ownership at every point in their total area (6 NYCRR 608.1).
 - *Outlet* - the terminus of a sewer system, or the point of emergence of any water-borne sewage, industrial waste or other wastes or the effluent therefrom, into the waters of the state (6 NYCRR 700.1).
 - *Pathogenic Organism* - any disease-producing organism (6 NYCRR 700.1).
 - *Point Source* - any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel, or other floating craft, from which pollutants are or may be discharged (6 NYCRR 750-1.2) [Citation Revised March 2004].
 - *Pollutant* - dredged spoil, filter backwash, solid waste, incinerator residue, sewage, garbage, sewage sludge, munitions, chemical wastes, biological materials, radioactive materials, heat, wrecked or discarded equipment, rock, sand and industrial, municipal, agricultural waste and ballast discharged into water; which may cause or might reasonably be expected to cause pollution of the waters of the state in contravention of the standards or guidance values adopted as provided in Parts 700 et seq of this Title (6 NYCRR 750-1.2) [Citation Revised March 2004].
 - *Raw Sewage* - any untreated sanitary waste (6 NYCRR 364.1(d)(4)).
 - *Regional Permit Administrator* - an employee of the department, one for each of the department's 9 regions, designated to act on the commissioner's behalf in carrying out the provisions of Article 70 of the ECL and Part 621 of this Title, or the regional permit administrator's designated representative. When used in this Part, the regional permit administrator is the one designated for the region in which the permittee discharges (6 NYCRR 750-1.2) [Revised March 2004].
 - *Regulated Waste* - a solid waste which is raw sewage, septage, sludge from a sewage or water supply treatment plant, waste oil, or industrial-commercial waste, including hazardous waste (6 NYCRR 364.1(d)(4)).
 - *Rerefined Oil* - any waste oil from which physical and/or chemical contaminants have been removed so that it is substantially equivalent to virgin distillate or virgin residual oil (6 NYCRR 364.1(d)(4)).
 - *Saline Groundwater* - groundwater having a chloride concentration of more than 250 mg/L or a total dissolved solids concentration of more than 1000 mg/L (6 NYCRR 700.1).
 - *Saline Surface Waters* - all waters that are so designated by the Commissioner (6 NYCRR 700.1).
 - *Saturated Zones* - any extensive portion of the earth's crust that contains sufficient water to fill all interconnected voids or pore spaces (6 NYCRR 700.1).

- *Septage* - the contents of a septic tank, cesspool, or other individual sewage treatment facility which receives domestic sewage waste (6 NYCRR 364.1(d)(4)).
- *Septic Tank* - an underground vessel for treating wastewater by combination of settling and anaerobic digestion (6 NYCRR 650.2).
- *Sewage* - the water-carried human or animal wastes from residences, buildings, industrial establishments, or other places, together with such groundwater infiltration and surface water as may be present (6 NYCRR 700.1).
- *Single Private Ownership* - the ownership by a person, joint ownership by more than one person or a single nongovernmental entity such as an association, corporation, trust, or estate. It does not include ownership by any unit of government, including a village, town, county, city, or the state or the United States or any subdivision, department, agency, or authority thereof (6 NYCRR 608.1).
- *Sludge* - any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility. Sludge does not include the treated effluent from a wastewater treatment plant (6 NYCRR 364.1(d)(4)).
- *Solid Waste* - any garbage, refuse, sludge, or any solid, liquid, semisolid, or contained gaseous material, resulting from industrial, commercial, mining, agricultural, community, or other activities, not excluded, which is discarded, disposed of, burned, or incinerated, including being burned as a fuel for the purpose of recovering usable energy, or is being accumulated, stored, or physically, chemically, or biologically treated in lieu of or prior to being disposed of, burned, or incinerated, or which has served its original use and is sometimes discarded, or is a manufacturing or mining byproduct and sometimes is discarded. The following materials are not solid wastes for the purposes of this section (6 NYCRR 364.1(d)(4)):
 1. domestic sewage and any mixture of domestic sewage and other wastes that passes through a sewer system to a publicly owned treatment works for treatment (domestic sewage means untreated sanitary wastes that pass through a sewer system)
 2. industrial wastewater discharges that are point source discharges for which a permit has been issued pursuant to article 17 of the Environmental Conservation Law
 3. irrigation return flows
 4. radioactive materials which are source, special nuclear, or byproduct material
 5. materials subject to in-site mining techniques which are not removed from the ground as part of the extraction process.
- *Storage* - the holding of solid waste for a temporary period, at the end of which the solid waste is processed, recovered, disposed of, or stored elsewhere (6 NYCRR 364.1(d)(4)).
- *Stream* - a watercourse or portion thereof, including the bed and banks thereof. Small ponds or lakes with a surface area at mean low water level of 10 acres or less and located in the course of a stream shall be considered part of a stream. A stream does not include a pond or lake having a surface area of greater than 10 acres at mean low water level (6 NYCRR 608.1).
- *Surface Impoundment or Impoundment* - a facility or part of a facility which is a natural topographical depression, manmade excavation, or diked area formed primarily of earthen materials (although it may be lined with manmade materials), which is designed to hold an accumulation of solid waste in semisolid or liquid form, and which is not an injection well. Examples of surface impoundments are holding, storage, settling, and aeration pits, ponds, and lagoons (6 NYCRR 364.1(d)(4)).
- *Thermal Discharge* - a discharge that results or would result in a temperature change of the receiving water (6 NYCRR 700.1) [Citation Revised March 2008].
- *Treatment Works* - any plant, disposal field, lagoon, pumping station, constructed drainage ditch or surface water intercepting ditch, incinerator, area devoted to sanitary landfills, or other works not specifically

mentioned here, installed for the purpose of treating, neutralizing, stabilizing, or disposing of sewage, industrial waste, or other wastes (6 NYCRR 700.1) [Citation Revised March 2008].

- *Waste Oil* - used engine lubricating oil and any other oil, including, but not limited to, fuel oil, motor oil, gear oil, cutting oil, transmission fluid, hydraulic fluid, dielectric fluid, oil storage tank residue, animal oil, and vegetable oil, which has been contaminated by physical or chemical impurities, through use or accident, and has not subsequently been rerefined (6 NYCRR 364.1(d)(4)).
- *Wastewater Treatment Plant* - any plant or facility owned or maintained by any county, city, village, town, district, or by any state department, agency, or authority, or by any sewer company, corporation, person or group of persons, or by any industry or institution, which subjects wastewater to a process for removing or altering the objectionable constituents of wastewater for the purpose of meeting the requirements of its state Pollutant Discharge Elimination System Permit (SPDES) and making it less offensive or dangerous (6 NYCRR 650.2).
- *Watercourse* - that area of land within which or upon which the flow of water is ordinarily confined due to existing topography (6 NYCRR 608.2).
- *Waters or Waters of the State* - lakes, bays, sounds, ponds, impounding reservoirs, springs, wells, rivers, streams, creeks, estuaries, marshes, inlets, canals, the Atlantic Ocean within the territorial limits of the State of New York and all other bodies of surface or underground water, natural or artificial, inland or coastal, fresh or salt, public or private (except those private waters which do not combine or effect a junction with natural surface or underground waters), which are wholly or partially within or bordering the State or within its jurisdiction (6 NYCRR 658.2) [Added March 2008].

Appendix 12-1

Effluent Standards for Marine Toilets

(Source: 6 NYCRR 656.1)

| Items | Specifications |
|---|--|
| Floating solids; settleable solids | Removal of substantially all floating and settleable solids which are readily visible and attributable to sewage |
| Suspended solids | Not more than 50 ppm |
| Five-day biochemical and chemical oxygen demand | Nor more than 50 ppm |
| Organisms of the coliform group | The median MPN value in any series of samples is not in excess of 50/100 mL |

NOTE: pH is not to be lower than 6.5 or the pH of the natural groundwater, whichever is lower, nor greater than 8.5 or the pH of the natural groundwater, whichever is greater.

SECTION 13

WATER QUALITY MANAGEMENT

New York Supplement, March 2010

This section covers the state requirements for Water Quality Management and is intended to supplement the U.S. TEAM Guide. Refer to the U.S. TEAM Guide and the DOD Component Supplements for Federal, DOD, and service-specific requirements.

Definitions

- *Abandoned Well* - a well whose use has been permanently discontinued. A well shall be deemed abandoned if it is in such a state of disrepair that continued use for the purpose of obtaining a satisfactory groundwater supply is impracticable (10 NYCRR 5-2.3) [Citation Revised January 1998].
- *Action Level* - the concentration of copper or lead that when exceeded trigger actions to be taken by a water system. Copper action level = 1.3 mg/L in 90 percent of 1 L first draw samples. Lead action level = 0.015 mg/L in 90 percent of 1 L first draw samples (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Auxiliary Source* - source of water supply that is not normally used but which has been approved for use by the Department or other state agencies having jurisdiction, and has been developed for use when the normal source or sources fail to meet the water supply requirements (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Community Water System* - a public water system that serves at least five service connections used by year-round residents or regularly serves at least 25 year-round residents (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Construction of Water Wells* - all acts necessary to obtain groundwater by wells, including the location and excavation of the well (10 NYCRR 5-2.3) [Citation Revised January 1998].
- *Contaminant* - any physical, chemical, microbiological, or radiological substances or matter in water (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Contamination* - any substance or characteristic that will make the water unsuitable or unsafe including a constituent or characteristic in an amount exceeding the allowable limits therefore hereinafter set forth (10 NYCRR 170.3) [Citation Revised January 1998].
- *Conventional Filtration* - a series of processes including coagulation, flocculation, sedimentation, and filtration (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Corrosion Inhibitor* - a substance capable of reducing the corrosivity of water toward metal plumbing materials, especially lead and copper, by forming a protective coating on the interior surface of these materials (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *CT* - the product of free residual disinfectant concentration (C) in milligrams per liter determined before or at the first customer, and the corresponding disinfectant contact time (T) in minutes, expressed by the formula $(C) \times (T) = CT$. Disinfectant contact time (T) is the time that it takes for water to move from the point of disinfectant application or the previous point of residual disinfectant measurement to a point before or at the point where residual disinfectant concentration (C) is measured (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Department* - the New York State Department of Health (10 NYCRR 5-1.1) [Citation Revised January 1998].

- *Distribution Point* - a sampling point representative of drinking water within the distribution system (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Diatomaceous Earth Filtration* - a process resulting in substantial particulate removal which a precoat cake of diatomaceous earth filter media is deposited on a support membrane (septum), and while the water is filtered by passing through the cake on the septum, additional filter media known as body feed is continuously added to the feed water to maintain the permeability of the filter cake (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Direct Filtration* - a series of processes including coagulation and filtration but excluding sedimentation resulting in substantial particulate removal (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Discharge* - any addition of any pollutant to state waters, waters of the contiguous zone, or the ocean through an outlet or point source (6 NYCRR 750.2) [Added January 1998].
- *Disposal System* - a system for disposing of sewage, industrial waste, or other wastes, including sewer systems and treatment works (6 NYCRR 700.1) [Added January 1998].
- *Dose Equivalent* - the product of absorbed dose from ionizing radiation and such factors as account for differences in biological effectiveness because of the type of radiation and its distribution in the body as specified by the International Commission on Radiological Units and Measurements (ICRU) (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Effective Corrosion Inhibitor Residual* - a concentration sufficient to form a protective coating on the interior walls of a pipe (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Emergency Source* - a source of water supply that is not the regular source or auxiliary source and which is developed during an emergency for temporary use (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Entry Point* - a representative sampling location after the last point of treatment but before the first consumer connection (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Filtration* - a process for removing particulate matter from water by passage through a porous material (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *First Draw Tap Sample for Lead and Copper* - a 1 L sample of water collected from a cold water tap after the water has stood in the plumbing system for at least 6 h and is collected without flushing the tap (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Flocculation* - a process to enhance agglomeration or collection of smaller floc particles into larger, more easily settleable particles through gentle stirring by hydraulic or mechanical mechanisms (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Gross Alpha Particle Activity* - the total radioactivity because of alpha particle emission as inferred from measurements on a dry sample (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Groundwater Directly Influenced by Surface Water* - any water beneath the surface of the ground that exhibits significant and rapid shifts in water characteristics such as turbidity, temperature, conductivity or pH which closely correlates to climatological or surface water conditions and/or which contains macroorganisms, algae, large diameter (3 micrometers or greater) pathogens or insect parts of a surface water origin (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Groundwater Source* - a source of water supply taken from a groundwater aquifer and developed in accordance with 10 NYCRR 5-1.22, but shall not include an admixture of surface water or water exposed to the ground surface (10 NYCRR 5-1.1) [Citation Revised January 1998].

- *Groundwaters* - those waters in saturated zones (6 NYCRR 700.1) [Added January 1998; Citation Revised March 2008].
- *Guidance Value* - such measure of purity or quality for any waters in relation to their reasonable and necessary use as may be established by the Department pursuant to 6 NYCRR 702.1 (6 NYCRR 700.1) [Added January 1998; Citation Revised March 2008].
- *Haloacetic acids (five) (HAA5)* - the sum of the concentrations in milligrams per liter of five specific haloacetic acid compounds, rounded to two significant figures after addition. The five haloacetic acids that comprise the HAA5 are monochloroacetic acid, dichloroacetic acid, trichloroacetic acid, monobromoacetic acid, and dibromoacetic acid (10 NYCRR 5-1.1) [Added March 2005].
- *Individual Water Supply System* - a water supply intended to supply one or more single parcels of land, except when supplied by a public water supply as defined in 10 NYCRR Part 5 (10 NYCRR 75.3) [Revised January 1998].
- *Large Water System* - a water system that serves more than 50,000 persons (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Lead Service Line* - a service line made of lead that connects the water main to the building inlet and any lead appurtenances connected to the lead service line (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Lead Service Line Sample* - a 1 L sample for lead, collected after the water has stood in the service line for at least 6 h. The sample must be collected directly from a tap on the service line or by calculating and wasting the amount of water in the plumbing system from the sampling point to the service line. At a single family structure, the sample may be collected by running the water until there is a significant change in water temperature (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Manmade Beta Particle and Photon Emitters* - all radionuclides emitting beta particles and/or photons, except the daughter products of thorium-232, uranium-235 and uranium-238 as listed in Maximum Permissible Body Burdens and Maximum Permissible Concentration of Radionuclides in Air or Water for Occupational Exposure, National Bureau of Standards, Handbook 69, as amended August 1963, U.S. Department of Commerce (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Maximum Contaminant Level (MCL)* - the maximum permissible level of a contaminant in water which is delivered to the free-flowing outlet of the ultimate user of a public water system. For entry point turbidity, the maximum permissible level is measured at the point of entry to the distribution system of treatment. For principal organic chemicals, unspecified organic chemicals and vinyl chloride, the MCL is measured at the individual sources, unless otherwise specified by the State. Substances added to the water by the user, and limited to the premises of the user, are excluded from this definition (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Maximum residual disinfectant level (MRDL)* - a level of disinfectant measured at a consumer's tap, above which the possibility of unacceptable health effects exists (10 NYCRR 5-1.1) [Added March 2005].
- *Maximum Total Trihalomethane Potential* - the maximum concentration of total trihalomethane produced in a given water containing a free chlorine residual after 7 days at a temperature of 25 °C or above (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Medium Water System* - a water system that serves greater than 3300 and less than or equal to 50,000 persons (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Millirem (mrem)* - 0.001 of a rem (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Noncommunity Water System* - a public water system that is not a community water system (10 NYCRR 5-1.1) [Citation Revised January 1998].

- *Nontransient, Noncommunity Water System* - a public water system that is not a community water system but is a subset of noncommunity water system that regularly serves at least 25 of the same persons, 4 h or more per day, for at least 4 days per week, for at least 26 weeks per yr (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Ocean* - any portion of the high seas beyond the contiguous zone (6 NYCRR 750.2) [Added January 1998].
- *Outlet* - the terminus of a sewer system, or the point of emergence of any water-borne sewage, industrial waste or other wastes or the effluent therefrom, into the waters of the state (6 NYCRR 700.1) [Added January 1998].
- *Optimal Corrosion Control Treatment* - the corrosion control treatment that reduces the lead and copper concentrations at users' taps to the lowest reasonably achievable level while ensuring that the treatment does not cause the water system to violate Part 5 of the State Sanitary Code or cause adverse health or operational effects (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Pathogenic Organism* - any disease-producing organism (6 NYCRR 700.1) [Added January 1998].
- *Permit-Issuing Official* - the health commissioner or health officer of a city of 50,000 population or over, the health commissioner or health officer of a county or part-county health district, the state regional health director or area director having jurisdiction, a grade I or grade II public health administrator qualified and appointed pursuant to Part 11 of this Title, or any county health director having all the powers and duties prescribed in section 352 of the Public Health Law. The health commissioner or health officer of a city of 50,000 population or over, or the health commissioner or health officer of a county or part-county health district, or such grade I or grade II public health administrator or county health director may designate the director of environmental health of such district; and the state regional health director or area director may designate the district sanitary engineer as additional persons authorized to issue the permits required by this Part (10 NYCRR 5-2.3) [Citation Revised January 1998].
- *Person* - an individual, corporation, company, association, partnership, State agency, municipality including a county, or Federal agency (10 NYCRR 5-1.1) [Added March 2005].
- *picoCurie* - that quantity of radioactive material producing 2.22 nuclear transformations per minute (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Point of Use* - the free-flowing outlet of the ultimate user of a public water system (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Point Source* - any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel, or other floating craft, from which pollutants are or may be discharged (6 NYCRR 750.2) [Added January 1998].
- *Principal Organic Contaminant (POC)* - any organic chemical compound belonging to the following classes, except for trichloromethane (chloroform), dibromochloromethane, bromodichloromethane, tribromomethane (bromoform):
 - halogenated Alkane
 - halogenated ether
 - halobenzenes and substituted halobenzenes
 - benzene and alkyl- or nitrogen-substituted benzenes
 - substituted, unsaturated hydrocarbons
 - halogenated nonaromatic cyclic hydrocarbons (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Protected from Contamination* - includes, in addition to responsibility for the prevention of contamination, responsibility for the reservation, surveillance, storage, diversion, collection, treatment, processing, distribution, and use of water for domestic and municipal purposes (10 NYCRR 170.3) [Citation Revised January 1998].
- *Public Health Hazard* - Public health hazard means an existing or imminent condition which can be responsible for or cause illness, injury or death and for which immediate corrective or remedial action is required. Public health hazards include, but are not limited to, the following (10 NYCRR 5-1.1) [Citation Revised January 1998; Revised March 2005]:

1. an *Escherichia coli* (*E. coli*) MCL violation, or failure to test for *E. coli* after any repeat sample tests positive for coliform;
 2. a nitrate/nitrite MCL violation, or failure to take a confirmation sample within 24 hours for nitrate or nitrite after an initial sample exceeds the MCL;
 3. an acute MRDL violation for chlorine dioxide as specified in section 5-1.52 table 3A of this Subpart, or failure to take the required samples in the distribution system the day after the MRDL is exceeded at the entry point as specified in section 5-1.52 table 15A of this Subpart;
 4. turbidity violations or exceedances specified in paragraph 5-1.78(d)(3) of this Subpart and determined by the State to present an existing or imminent condition which can be responsible for or cause illness, injury or death and for which immediate corrective or remedial action is required;
 5. use of an unapproved or contaminated water supply source;
 6. insufficient quantity of water to meet drinking or sanitary demands;
 7. hazardous or toxic chemical contamination;
 8. disinfection which is inadequate to destroy harmful microorganisms or to maintain a specified chlorine residual;
 9. disruption of water service of four hours or more, determined by the State to present an existing or imminent condition which can be responsible for or cause illness, injury or death and for which immediate corrective or remedial action is required;
 10. cross-connections of sufficient hazard to adversely affect the health of a water consumer; and
 11. any other conditions, including a waterborne disease outbreak, determined to be a public health hazard by the commissioner.
- *Public Notification* - disseminating information about a problem with a public water system in a form and manner consistent with section 5-1.78 of this Subpart (10 NYCRR 5-1.1) [Added March 2005].
 - *Public Water System* - a community, noncommunity, or nontransient noncommunity water system which provides piped water to the public for human consumption, if such system has at least five service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. Such term includes: (10 NYCRR 5-1.1)
 1. collection, treatment, storage and distribution facilities under control of the supplier of water of such system and used with such system, and
 2. collection or pretreatment storage facilities not under such control which are used with such system.
 - *Raw Water* - water immediately before the first or only point of disinfection or other treatment (10 NYCRR 5-1.1) [Citation Revised January 1998].
 - *Regular Source* - a source of water supply that is normally used and is approved by the Department and other state agencies having jurisdiction (10 NYCRR 5-1.1) [Citation Revised January 1998].
 - *rem* - the unit dose equivalent from ionizing radiation to the total body or any internal organ or organ system (10 NYCRR 5-1.1) [Citation Revised January 1998].
 - *Saline Groundwater* - groundwater having a chloride concentration of more than 250 mg/L or a total dissolved solids concentration of more than 1000 mg/L (6 NYCRR 700.1) [Added January 1998].
 - *Saline Surface Waters* - all waters that are so designated by the Commissioner (6 NYCRR 700.1) [Added January 1998].
 - *Saturated Zones* - any extensive portion of the earth's crust that contains sufficient water to fill all interconnected voids or pore spaces (6 NYCRR 700.1) [Added January 1998].
 - *Sedimentation* - a process for removal of solids before filtration by gravity or separation (10 NYCRR 5-1.1) [Citation Revised January 1998].
 - *Service Connection* - the pertinent pipes, valves and fittings that connect a distribution system to a consumer's facility (10 NYCRR 5-1.1) [Citation Revised January 1998].

- *Sewage* - the water-carried human or animal wastes from residences, buildings, industrial establishments, or other places, together with such groundwater infiltration and surface water as may be present (6 NYCRR 700.1) [Added January 1998].
- *Shellfish* - includes oysters, scallops, clams, mussels, and other aquatic mollusks, and lobsters, shrimp, crayfish, crabs, and other aquatic crustaceans (NYCRR 700.1) [Added March 2009].
- *Single Family Structure* - a building constructed as a single-family residence that is currently used as either a residence or a place of business (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Slow Sand Filtration* - a process involving passage of raw water through a bed of sand at low velocity resulting in particulate removal by physical or biological mechanisms (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Small Water System* - a water system that serves 3300 or fewer persons (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Source of Water Supply* - any groundwater aquifer or watercourse from which water is taken either periodically or continuously for drinking, culinary, or food-processing purposes, or which has been designated for present or future use as a source of water supply for domestic or municipal purposes (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *State* - the State Commissioner of Health, or his designated representative (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *State Notification* - notifying the state by telephone, facsimile (FAX) copy or other means within 24 h of learning of the existence or potential existence of a public health hazard, or within 48 h after the supplier of water learns of a failure to comply. The initial telephone notification to the state shall be confirmed, by the supplier of water within 24 h, by certified letter (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Supplier of Water* - any person who owns or operates a public water system (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Surface Water* - all water open to the atmosphere and subject to surface runoff (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Thermal Discharge* - a discharge that results or would result in a temperature change of the receiving water (6 NYCRR 700.1(a)(44)) [Added January 1998].
- *Tier 1 Notification* - the category for public notifications that are required within 24 hours of learning of a public health hazard. Section 5-1.78(c) of this Subpart lists the specific requirements for Tier 1 notifications (10 NYCRR 5-1.1) [Added March 2005].
- *Tier 2 Notification* - the category for public notifications that are required within 30 days of learning of a violation or situation with the potential to have serious adverse effects on human health after long term exposure, such as most MCL, MRDL and treatment technique violations that are not public health hazards. Section 5-1.52 table 13 of this Subpart lists violations and situations that require Tier 2 notification; section 5-1.78(d) of this Subpart lists the specific requirements for Tier 2 notifications (10 NYCRR 5-1.1) [Added March 2005].
- *Tier 3 Notification* - the category for public notifications that are required within one year (30 days for transient noncommunity water systems) of learning of a less serious violation or situation that does not require a Tier 1 or Tier 2 notification, such as most monitoring violations. Section 5-1.52 table 13 of this Subpart lists violations and situations that require Tier 3 notification; section 5-1.78(e) of this Subpart lists the specific requirements for Tier 3 notifications (10 NYCRR 5-1.1) [Added March 2005].

- *Total Trihalomethane (TTHM)* - the sum of the concentration of trichloromethane (chloroform), dibromochloromethane, bromodichloromethane and tribromomethane (bromoform) (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Transient Noncommunity Water System (TNC)* - a noncommunity water system that does not regularly serve at least 25 of the same people over six months per year (10 NYCRR 5-1.1) [Added March 2005].
- *Trout* - any fish in the following genera: Coregonus, Oncorhynchus, Prosopium, Salmo, Salvelinus and Thymallus (NYCRR 700.1) [Added March 2009].
- *Trout Waters* - waters that provide habitat in which trout can survive and grow within a normal range on a year-round basis, or on a year-round basis excepting periods of time during which almost all of the trout inhabiting such waters could and would temporarily retreat into and survive in adjoining or tributary waters due to natural circumstances. When these conditions exist or have been met a water may be classified as a trout water and identified with the symbol (T), appearing in an entry in the "standards" column in the classification tables of parts 800 through 941 of this Title (NYCRR 700.1) [Added March 2009].
- *Trout Spawning Waters* - trout waters in which trout eggs can be deposited and be fertilized by trout inhabiting such waters (or connecting waters) and in which those eggs can develop and hatch, and the trout hatched therefrom could survive and grow to a sufficient size and stage of development to enable them to either remain and grow to adult trout therein, or migrate into and survive in other trout waters. When these conditions exist or have been met a water may be classified as a trout spawning water and identified with the symbol (TS), appearing in an entry in the "standards" column in the classification tables of Parts 800 through 941 of this Title (NYCRR 700.1) [Added March 2009].
- *Unspecified Organic Contaminant (UOC)* - any organic chemical compound not otherwise specified in the regulations (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Violation* - failure to comply with or conform to the provisions of these regulations (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Virus* - a virus of fecal origin infectious to humans by waterborne transmission (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Water Supply Emergency Plan* - a plan approved by the state and filed with the state at such location as specified by the Commissioner. The plan shall address the actions to be taken by a water supplier to anticipate water supply emergencies and the steps to be taken to ensure the delivery of potable water during a water supply emergency (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Water Treatment Assistant Operator* - a person who, under the direction of a certified water treatment operator, is involved in the day-to-day operation of a water treatment plant or a major segment of a water treatment plant at a community water system (10 NYCRR 5-4.1) [Citation Revised January 1998].
- *Water Treatment Operator* - the certified person in responsible charge of the operation of the water treatment plant at a community water system (10 NYCRR 5-4.1) [Citation Revised January 1998].
- *Water Treatment Plant* - any plant or equipment that, through the addition of chemicals or through aeration, ion exchange, demineralization, coagulation, sedimentation, or filtration, or through any other means or combinations of treatment, shall change the physical, chemical, radiological, or microbiological quality of water (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Waterborne Disease Outbreak* - the occurrence of acute infectious illness epidemiologically associated with the ingestion of water from a public water system (10 NYCRR 5-1.1) [Citation Revised January 1998].
- *Well* - any excavation that is drilled, cored, bored, washed, driven, dug, jetted, or otherwise constructed when the intended use of such excavation is for the location or acquisition of groundwater, but such does not include an

excavation made for the purpose of obtaining or for prospecting for oil, natural gas, minerals, or products of mining or quarrying, or for inserting media to repressure oil or natural gas-bearing formation or for storing petroleum, natural gas or other products (10 NYCRR 5-2.3) [Citation Revised January 1998].

| Contaminants | (mg/l) ⁴ |
|---------------------------|---|
| Asbestos | 7.0 million fiber/liter (MFL) (Longer than 10 microns) |
| Antimony | 0.006 |
| Arsenic | 0.05 |
| Barium | 2.00 |
| Beryllium | 0.004 |
| Cadmium | 0.05 |
| Chromium | 0.10 |
| Cyanide (as free Cyanide) | 0.2 |
| Mercury | 0.002 |
| Selenium | 0.05 |
| Silver | 0.1 |
| Thallium | 0.002 |
| Fluoride | 2.2 |
| Chloride | 250.0 |
| Iron | 0.3 ² |
| Manganese | 0.3 ² |
| Sodium | No designated limits ³ |
| Sulfate | 250.0 |
| Zinc | 5.0 |
| Color | 15 Units |
| Odor | 3 Units |

² If iron and manganese are present, the total concentration of both should not exceed 0.5 mg/l. Higher levels may be allowed by the State when justified by the supplier of water.

³ Water containing more than 20 mg/l of sodium should not be used for drinking by people on severely restricted sodium diets. Water containing more than 270 mg/l of sodium should not be used for drinking by people on moderately restricted sodium diets.

⁴ mg/l = milligrams per liter.

Appendix 13-2

Organic Chemical Maximum Contaminant Levels (MCLs)

(Source: 10 NYCRR 5-1.52, Table 3) [Citation Revised January 1998; Revised January 1999; Revised March 2004]

(NOTE: 2,4-D MCL is 0.05 ppm, while Federal standard is 0.07 ppm. 2,4,5-TP (Silvex) MCL is 0.1 ppm while Federal standard is 0.05 ppm. New York also includes propylene glycol MCL of 1.0 ppm.)

| Contaminant | MCL(mg/l) | Type of Water System |
|---------------------------------------|------------|----------------------------------|
| General organic chemicals | | Community, NTNC and Noncommunity |
| Principal organic contaminant (POC) | 0.005 | |
| Unspecified organic contaminant (UOC) | 0.05 | |
| Total POCs and UOCs | 0.1 | |
| Trihalomethanes ² | | Community and Noncommunity |
| Total trihalomethanes ¹ | 0.10 | |
| Group I Contaminants | MCL (mg/l) | Type of Water System |
| Alachlor | 0.002 | Community, NTNC and Noncommunity |
| Aldicarb | 0.003 | |
| Aldicarb sulfone | 0.002 | |
| Aldicarb sulfoxide | 0.004 | |
| Atrazine | 0.003 | |
| Benzo(a)pyrene | 0.0002 | |
| Carbofuran | 0.04 | |
| Chlordane | 0.002 | |
| Di(2-ethylhexyl)phthalate | 0.006 | |
| Dibromochloropropane(DBCP) | 0.0002 | |
| 2, 4-D | 0.05 | |
| Dinoseb | 0.007 | |
| Diquat | 0.02 | |
| Endrin | 0.002 | |
| Ethylene dibromide(EDB) | 0.00005 | |
| Heptachlor | 0.0004 | |
| Heptachlor epoxide | 0.0002 | |
| Hexachlorobenzene | 0.001 | |
| Lindane | 0.0002 | |
| Methoxychlor | 0.04 | |
| Pentachlorophenol | 0.001 | |
| Polychlorinated biphenyls (PCBs) | 0.0005 | |
| Propylene glycol | 1.0 | |
| Simazine | 0.004 | |
| Toxaphene | 0.003 | |
| 2, 4, 5-TP (Silvex) | 0.01 | |
| 2, 3, 7, 8-TCDD (dioxin) | 0.00000003 | |
| Vinyl Chloride | 0.002 | |

¹ Effective one yr after beginning sampling according to the minimum monitoring requirements.

² The State may require a supplier of water to monitor for MTP at a frequency specified by the State.

| Monitoring and Control of Disinfection Byproduct Precursors (section 5-1.60 to 5-1.64) | Not applicable | State Tier 2 | State Tier 3 |
| Disinfectant residuals Chlorine and Chloramine (section 5-1.52 tables 3A and 15) | State | State Tier 2 | State Tier 3 |
| Disinfectant residual Chlorine dioxide At entry point (section 5-1.52 tables 3A and 15) | State | State Tier 2 | State ¹² Tier 3, or Tier 2 |
| Disinfectant residual Chlorine dioxide In distribution system (section 5-1.52 tables 3A and 15) | State | State ¹³ Tier 1 | State ¹³ Tier 1 |
| Disinfection byproducts Trihalomethanes Haloacetic acids (Tables 3 and 9A) and Bromate and Chlorite (section 5-1.52 tables 1 and 8B) | Not applicable | State Tier 2 | State Tier 3 |
| Acrylamide and Epichlorohydrin (section 5-1.51(j)) | Not applicable | State Tier 2 | Not applicable |
| Operation under a variance or exemption | Not applicable | Tier 3 | Not applicable |
| Violation of conditions of a variance or exemption | Not applicable | State Tier 2 | Not applicable |
| Disruption of water service of four hours or more (section 5-1.23(b)) | Not applicable | ⁶ State | Not applicable |

¹ MCL-maximum contaminant level, MRDL-maximum residual disinfectant level, TT-treatment technique

² State notification must be made by the supplier of water within 24 hours of learning of an E. coli positive sample

³ Public notification normally does not have to be issued for an E. coli positive sample prior to the results of the repeat samples. However, there may be situations where the State determines that a Tier 1 notification is necessary to protect the public health. The supplier of water must provide the Tier 1 notification no later than 24 hours after learning of the State's determination.

⁴ Failure to test for E. coli requires a Tier 1 notification if testing is not done after any repeat sample tests positive for coliform. All other E. coli monitoring and testing procedure violations require Tier 3 notification.

⁵ Tier 2 notification is normally required, however, there may be situations where the State determines that a Tier 1 notification is necessary to protect the public health. The supplier of water must provide the Tier 1 notification no later than 24 hours after learning of the State's determination.

- ⁶ Tier 1 notification is required if the situation meets the definition of a public health hazard.
- ⁷ If the daily entry point analysis exceeds one NTU, a repeat sample must be taken as soon as practicable and preferably within one hour. If the repeat sample exceeds one NTU, the supplier of water must make state notification.
- ⁸ Systems must consult with the State within 24 hours after learning of the violation. Based on this consultation, the State may subsequently decide to elevate the violation from a Tier 2 to a Tier 1 notification. If consultation does not take place within the 24 hour period, the water system must distribute a Tier 1 notification no later than 48 hours after the system learns of the violation.
- ⁹ These violations include the following: failure to comply with the treatment technique or monitoring requirements in section 5-1.30(b), (c), and (g) of this Subpart; failure to comply with the avoidance criteria in section 5-1.30(c) of this Subpart; and failure to install filtration or disinfection treatment facilities required by section 5-1.30 of this Subpart; failure to report to the state information required in paragraph (3) of section 5-1.72(c) of this Subpart; and failure to maintain records required in paragraph (7) of section 5-1.72(c) of this Subpart.
- ¹⁰ Applies to systems that have surface water or groundwater directly influenced by surface water as a source and use chlorine. The system must make State notification whether the residual was restored to at least 0.2 mg/L within four hours.
- ¹¹ Failure to take a confirmation sample within 24 hours for nitrate or nitrite after an initial sample exceeds the MCL requires a Tier 1 notification. Other monitoring violations for nitrate or nitrite require a Tier 3 notification.
- ¹² Failure to monitor for chlorine dioxide at the entrance to the distribution system the day after exceeding the MRDL at the entrance to the distribution system requires a Tier 2 notification. Other monitoring violations for chlorine dioxide at the entrance to the distribution system require a Tier 3 notification.
- ¹³ If any daily sample taken at the entrance to the distribution system exceeds the MRDL for chlorine dioxide and one or more samples taken in the distribution system the next day exceed the MRDL, Tier 1 notification is required. Failure to take the required samples in the distribution system the day after the MRDL is exceeded at the entry point also triggers Tier 1 notification.
- ¹⁴ State notification must be made by the supplier of water within 24 hours of learning of the violation.

Appendix 13-8

Required Minimum Grade for Water Treatment Plants and Distribution System Operators

(Source: 10 NYCRR 5-4.2) [Added January 1998]

| Plant type | Operator | Assistant operator |
|--|-----------------|---------------------------|
| Water treatment plant with facilities for filtration which treats over 2.5 MGD (million gal/day) | IA | IIA |
| Water treatment plant with facilities for filtration which treats 2.5 MGD or less | IIA | IIA |
| Water treatment plant without facilities for filtration which treats over 2.5 MGD | IB | IIB |
| Water treatment plant without facilities for filtration which treats 2.5 MGD or less and serves more than 1,000 people | IIB | C |
| Water treatment plant without facilities for filtration that serves 1,000 people or less | C | None required |
| Distribution system serving 1,000 people or more | D | None required |

Appendix 13-9

Standards of Raw Water Quality

(Source: 10 NYCRR 170.4) [Citation Revised January 1998]

| Items | Specifications |
|--|---|
| 1. Floating solids; settleable solids; oil; sludge deposits; tastes or odor producing substances | None attributable to sewage, industrial wastes, or wastes. |
| 2. Sewage or water effluents | None which are not effectively disinfected. |
| 3. pH | Range between 6.5 and 8.5 |
| 4. Dissolved oxygen | For trout waters, greater than 5.0 ppm; for nontrout waters greater than 4.0 ppm. |
| 5. Toxic wastes, oil, deleterious substances, colored or other wastes or heated liquids | None alone or in combination with other substances or wastes in sufficient amounts or at such temperatures as to make the waters unsafe or unsuitable as a water supply for drinking, culinary or food processing purposes. Provided further, that the concentration or quantity of the constituents hereinafter set forth must not be exceed the allowable limits established therefore. |
| 6. Turbidity | 5 NTU |
| 7. Microbiological | |
| Coliform organism | 50 per 100 mL |
| 8. Inorganic chemicals | (Concentration in mg/L) |
| Ammonia (NH ₃) | <.0 |
| Arsenic (As) | 0.05 |
| Barium (Ba) | 1.0 |
| Boron (B) | 1.0 |
| CCE | 0.2 |
| Cadmium (Cd) | 0.01 |
| Chloride (Cl) | 250 |
| Chromium (Hexavalent) (Cr+6) | 0.05 |

| Strontium - 90 | 10 |

Appendix 13-10

Narrative Water Quality Standards

(Source: 6 NYCRR 703.2) [Revised March 2008]

| Parameters | Classes | Standard |
|---|--|--|
| Taste-, color-, and odor-producing toxic and other deleterious substances | AA, A, B, C, D, SA, SB, SC, I, SD, A-Special, GA, GSA, GSB | None in amounts that will adversely affect the taste, color or odor thereof, or impair the waters for their best usages. |
| Turbidity | AA, A, B, C, D, SA, SB, SC, I, SD | No increase that will cause a substantial visible contrast to natural conditions. |
| Suspended, colloidal, and settleable solids | AA, A, B, C, D, SA, SB, SC, I, SD, A-Special | None from sewage, industrial wastes, or other wastes that will cause deposition or impair the waters for their best usages. |
| Oil and floating substances | AA, A, B, C, D, SA, SB, SC, I, SD, A-Special | No residue attributable to sewage, industrial wastes, or other wastes nor visible oil film nor globules of grease. |
| Garbage, cinders, ashes, oils, sludge, and other refuse | SA, SB, SC, I, SD | None in any amounts. |
| Phosphorus and nitrogen | AA, A, B, C, D, SA, SB, SC, I, SD, A-Special | None in amounts that will result in growths of algae, weeds, and slimes that will impair the waters for their best usages. |
| Radioactivity | A-Special | Should be kept at the lowest practicable levels, and in any event should be controlled to the extent necessary to prevent harmful effects on health. |
| Thermal discharges | GA, GSA, GSB | None in amounts that will impair the waters for their best usages. |
| Thermal discharges | AA, A, B, C, D, SA, SB, SC, I, SD, A-Special | See 6 NYCRR Part 704; see also section WA.90.NY. |
| Flow | AA, A, B, C, D, A-Special | No alteration that will impair the waters for their best usages. |
| | | |

Appendix 13-11

Water Quality Standards for pH, Dissolved Oxygen, Dissolved Solids, Odor, Color, and Turbidity

(Source: 6 NYCRR 703.3) [Revised March 2008]

| Parameter | Classes | Standard |
|-----------------------|---|--|
| pH | AA, A, B, C, AA-Special, A-Special, GA | Must not be less than 6.5 nor more than 8.5. |
| | D | Must not be less than 6.0 nor more than 9.5. |
| | SA, SB, SC, I, SD | The normal range must not be extended by more than one-tenth (0.1) of a pH unit. |
| Dissolved oxygen (DO) | A-Special | In rivers and upper waters of lakes, not less than 6.0 mg/L at any time. In hypolimnetic waters, it should not be less than necessary for the support of fishlife, particularly cold water species. |
| | AA, A, B, C, AA-Special | For trout spawning waters(TS), the DO concentration must not be less than 7.0 mg/L from other than natural conditions. For trout waters, the minimum daily average must not be less than 6.0 mg/L, and at no time must the concentration be less than 5.0 mg/L. For nontrout waters, the minimum daily average must not be less than 5.0 mg/L, and at no time must the DO concentration be less than 4.0 mg/L. |
| | D | Must not be less than 3.0 mg/L at any time. |
| | SA, SB, SC | Chronic: Shall not be less that a daily average of 4.8 mg/L * |
| | | Remark:*The DO concentration may fall below 4.8 mg/L for a limited number of days, as defined by the formula: $DO_i = 13.0 - 2.80 - 1.84e^{-0.1t_i}$ Where DO_i = DO concentration in mg/L between 3.0 - 4.8 mg/L and t_i = time in days. This equation is applied by dividing the DO range of 3.0 - 4.8 mg/L into a number of equal intervals. DO_i is the lower bound of each interval (i) and t_i is the allowable number of days that the DO concentration can be within that interval. The actual number of days that the measured DO concentration falls within each interval (i) is divided by the allowable number of days that the DO can fall within interval (t_i). The sum of the quotients of all intervals ($\sum \frac{i}{t_i}$) cannot exceed 1.0: i.e., $\sum_{i=1}^n \frac{t_i(\text{actual})}{t_i(\text{allowed})} < 1.0$ The DO concentration shall not fall below the acute standard of 3.0 mg/L at any time. |
| | SA, SB, SC, SD | Acute: Shall not be less than 3.0 mg/L at any time |
| I | Must not be less than 4.0 mg/L at any time. | |
| Dissolved solids | A-Special | Must not exceed 200 mg/L |
| | AA, A, B, C, AA-Special, GA | Must be kept as low as practicable to maintain the best usage of waters but in no case must it exceed 500 mg/L. |
| Odor | GA | Must not exceed a threshold odor number of 3. |
| Color | GA | Must not exceed 15 color units (platinum-cobalt method). |
| Turbidity | GA | Must not exceed 5 NTU. |

| Zineb | 12122-67-7 | 1.8 |
| Ziram | 137-30-4 | 4.2 |

- {1} Includes related forms that convert to the organic acid upon acidification to a pH of 2 or less; and esters of the organic acid.
- {2} Foaming agents determined as methylene blue active substances (MBAS) or other tests as specified by the commissioner.
- {3} Refer to groundwater effluent limitation for "Phenolic compounds (total phenols)".
- {4} Combined concentration of iron and manganese shall not exceed 1000 ug/L.
- {5} Includes related forms that convert to nitrilotriacetic acid upon acidification to a pH of 2.3 or less.
- {6} pH shall not be lower than 6.5 or the pH of the natural groundwater, whichever is lower, nor shall be greater than 8.5 or the pH of the natural groundwater, whichever is greater.

In addition to the effluent limitations above, the following also apply in the counties of Nassau and Suffolk:

| Substance | Maximum Allowable Concentration in mg/L |
|-----------------------------|---|
| (1) Dissolved solids, total | 1,000 |
| (2) Nitrogen, total (as N) | 10 |

Appendix 13-13

Required Minimum Separation Distances to Protect Water Wells From Contamination Contaminant Source (Source: 10 NYCRR Appendix 5-1, 5-B.7) [Added March 2006; Citation Revised March 2008]

| Contaminant Source | Distance ¹ (Feet) |
|--|---------------------------------|
| Chemical storage sites not protected from the elements (e.g., salt and sand/salt storage) ² | 300 |
| Landfill waste disposal area, or hazardous or radiological waste disposal area ² | 300 |
| Land surface application or subsurface injection of effluent or digested sludge from a Municipal or public wastewater treatment facility | 200 |
| Land surface application or subsurface injection of septage waste | 200 |
| Land surface spreading or subsurface injection of liquid or solid manure ³ | 200 |
| Storage Areas for Manure piles ⁴ | 200 |
| Barnyard, silo, barn gutters and animal pens ^{5,6} | 100 |
| Cesspools (i.e. pits with no septic tank pretreatment) | 200 |
| Wastewater treatment absorption systems located in coarse gravel or in the direct path of drainage to a well | 200 |
| Fertilizer and/or pesticide mixing and/or clean up areas | 150 |
| Seepage pit (following septic tank) ⁵ | 150 |
| Underground single walled chemical or petroleum storage vessels | 150 |
| Absorption field or bed ⁵ | 100 |
| Contained chemical storage sites protected from the elements (e.g., salt and sand/salt storage within covered structures) ⁷ | 100 |
| Septic system components (non-watertight) ⁵ | 100 |
| Intermittent sand filter without a watertight liner ⁵ | 100 |
| Sanitary Privy pit ⁵ | 100 |
| Surface wastewater recharge absorption system constructed to discharge storm water from parking lots, roadways or driveways ⁵ | 100 |
| Cemeteries | 100 |
| Sanitary privy with a watertight vault | 50 |
| Septic tank, aerobic unit, watertight effluent line to distribution box | 50 |
| Sanitary sewer or combined sewer | 50 |
| Surface water recharge absorption system with no automotive-related Wastes (e.g., clear-water basin, clear-water dry well) | 50 |
| Stream, lake, watercourse, drainage ditch, or wetland | 25 |
| All known sources of contamination otherwise not shown above | 100 |

¹ The listed water well separation distances from contaminant sources shall be increased by 50 percent whenever aquifer water enters the water well at less than 50 feet below grade. If a 50 percent increase in separation distances can not be achieved, then the greatest possible increase in separation distance shall be provided with such additional measures as needed to prevent contamination.

² Water wells shall not be located in a direct line of flow from these items, nor in any contaminant plume created by these items, except with such additional measures (e.g., sentinel groundwater monitoring, hydraulic containment, source water treatment) as needed to prevent contamination.

³ Based upon on-site evaluations of agricultural properties done per agricultural environmental management (AEM) or comprehensive nutrient management plan (CNMP) programs by a certified nutrient management planner or soil and water conservation district (SWCD) official, water wells may be located a minimum of 100 feet from areas subject to land spreading of manure.

⁴ Water wells may be located 100 feet from temporary (30 days or less) manure piles/staging areas that are controlled to preclude contamination of surface or groundwater or 100 feet from otherwise managed manure piles that are controlled pursuant to regulation in a manner that prevents contamination of surface or groundwater.

⁵ When these contamination sources are located in coarse gravel or are located upgrate and in the direct path of drainage to a water well, the water well shall be located at least 200 feet away from the closest part of these sources.

⁶ Animal pen does not include small pet shelters or kennels housing 3 or fewer adult pets.

⁷ Chemical storage sites as used in this entry do not include properly maintained storage areas of chemicals used for water treatment nor areas of household quantities of commonly used domestic chemicals.

Appendix 13-14

Water Classifications

(Source: 6 NYCRR 701.2 through 701.17) [Added March 2009]

Section 701.2. Class N Fresh Surface Waters

- (a) The best usages of Class N waters are the enjoyment of water in its natural condition and, where compatible, as a source of water for drinking or culinary purposes, bathing, fishing, fish propagation, and recreation. The waters shall be suitable for shellfish and wildlife propagation and survival and fish survival.
- (b) There shall be no discharge of sewage, industrial wastes, or other wastes, waste effluents or any sewage effluents not having had filtration resulting from at least 200 feet of lateral travel through unconsolidated earth. A greater distance may be required if inspection shows that, due to peculiar geologic conditions, this distance is inadequate to protect the water from pollution.
- (c) These waters shall contain no deleterious substances, hydrocarbons or substances that would contribute to eutrophication, nor shall they receive surface runoff containing any such substance.
- (d) There shall be no alteration to flow that will impair the waters for their best usages.

Section 701.3. Class AA--Special (AA-S) Fresh Surface Waters

- (a) The best usages of Class AA-S waters are: a source of water supply for drinking, culinary or food processing purposes; primary and secondary contact recreation; and fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival.
- (b) These waters shall contain no floating solids, settleable solids, oil, sludge deposits, toxic wastes, deleterious substances, colored or other wastes or heated liquids attributable to sewage, industrial wastes or other wastes.
- (c) There shall be no discharge or disposal of sewage, industrial wastes or other wastes into these waters.
- (d) These waters shall contain no phosphorus and nitrogen in amounts that will result in growths of algae, weeds and slimes that will impair the waters for their best usages.
- (e) There shall be no alteration to flow that will impair the waters for their best usages.
- (f) There shall be no increase in turbidity that will cause a substantial visible contrast to natural conditions.

Section 701.4. Class A--Special (A-S) Fresh Surface Waters

- (a) The best usages of Class A-S waters are: a source of water supply for drinking, culinary or food processing purposes; primary and secondary contact recreation; and fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival.
- (b) This classification may be given to those international boundary waters that, if subjected to approved treatment, equal to coagulation, sedimentation, filtration and disinfection with additional treatment, if necessary, to reduce naturally present impurities, meet or will meet New York State Department of Health drinking water standards and are or will be considered safe and satisfactory for drinking water purposes.

Section 701.5. Class AA Fresh Surface Waters

- (a) The best usages of Class AA waters are: a source of water supply for drinking, culinary or food processing purposes; primary and secondary contact recreation; and fishing. The waters shall be suitable for fish, trout, and wildlife propagation and survival.
- (b) This classification may be given to those waters that, if subjected to approved disinfection treatment, with additional treatment if necessary to remove naturally present impurities, meet or will meet New York State Department of Health drinking water standards and are or will be considered safe and satisfactory for drinking water purposes.

Section 701.6. Class A Fresh Surface Waters

- (a) The best usages of Class A waters are: a source of water supply for drinking, culinary or food processing purposes; primary and secondary contact recreation; and fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival.
- (b) This classification may be given to those waters that, if subjected to approved treatment equal to coagulation, sedimentation, filtration and disinfection, with additional treatment if necessary to reduce naturally present impurities, meet or will meet New York State Department of Health drinking water standards and are or will be considered safe and satisfactory for drinking water purposes.

Section 701.7. Class B Fresh Surface Waters

The best usages of Class B waters are primary and secondary contact recreation and fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival

Section 701.8. Class C Fresh Surface Waters

The best usage of Class C waters is fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival. The water quality shall be suitable for primary and secondary contact recreation, although other factors may limit the use for these purposes.

Section 701.9. Class D Fresh Surface Waters

The best usage of Class D waters is fishing. Due to such natural conditions as intermittency of flow, water conditions not conducive to propagation of game fishery, or stream bed conditions, the waters will not support fish propagation. These waters shall be suitable for fish, shellfish, and wildlife survival. The water quality shall be suitable for primary and secondary contact recreation, although other factors may limit the use for these purposes.

Section 701.10. Class SA Saline Surface Waters

The best usages of Class SA waters are shellfishing for market purposes, primary and secondary contact recreation and fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival.

Section 701.11. Class SB Saline Surface Waters

The best usages of Class SB waters are primary and secondary contact recreation and fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival.

Section 701.12. Class SC Saline Surface Waters

The best usage of Class SC waters is fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival. The water quality shall be suitable for primary and secondary contact recreation, although other factors may limit the use for these purposes.

Section 701.13. Class I Saline Surface Waters

The best usages of Class I waters are secondary contact recreation and fishing. The waters shall be suitable for fish, shellfish, and wildlife propagation and survival.

Section 701.14. Class SD Saline Surface Waters

The best usage of Class SD waters is fishing. These waters shall be suitable for fish, shellfish, and wildlife survival. This classification may be given to those waters that, because of natural or man-made conditions, cannot meet the requirements for primary and secondary contact recreation and fish propagation.

Section 701.15. Class GA Fresh Groundwaters

The best usage of Class GA waters is as a source of potable water supply. Class GA waters are fresh groundwaters.

Section 701.16. Class GSA Saline Groundwaters

The best usages of Class GSA waters are as a source of potable mineral waters, for conversion to fresh potable waters, or as raw material for the manufacture of sodium chloride or its derivatives or similar products. Class GSA waters are saline groundwaters.

Section 701.17. Class GSB Saline Groundwaters

The best usage of Class GSB waters is as a receiving water for disposal of wastes. Class GSB waters are saline groundwaters that have a chloride concentration in excess of 1,000 milligrams per liter or a total dissolved solids concentration in excess of 2,000 milligrams per liter.

Appendix 13-15

Total And Fecal Coliform Standards
(Source: 6 NYCRR 703.4) [Added March 2009]

(a) Total coliforms (number per 100 ml).

| Classes | Standard |
|--------------------|--|
| AA | The monthly median value and more than 20 percent of the samples, from a minimum of five examinations, shall not exceed 50 and 240, respectively. |
| A, B, C, D, SB, SC | The monthly median value and more than 20 percent of the samples, from a minimum of five examinations, shall not exceed 2,400 and 5,000, respectively. |
| SA | The median most probable number (MPN) value in any series of representative samples shall not be in excess of 70. |
| I | The monthly geometric mean, from a minimum of five examinations, shall not exceed 10,000. |
| A-Special | The geometric mean, of not less than five samples, taken over not more than a 30-day period shall not exceed 1,000. |
| GA | The maximum allowable limit is 50. |

(b) Fecal coliforms (number per 100 ml).

| Classes | Standard |
|--------------------|---|
| A, B, C, D, SB, SC | The monthly geometric mean, from a minimum of five examinations, shall not exceed 200. |
| I | The monthly geometric mean, from a minimum of five examinations, shall not exceed 2,000. |
| A-Special | The geometric mean, of not less than five samples, taken over not more than a 30-day period shall not exceed 200. |

(c) The total and fecal coliform standards for classes B, C, D, SB, SC, and I shall be met during all periods:

- (1) when disinfection is required for SPDES permitted discharges directly into, or affecting the best usage of, the water;
- or
- (2) when the department determines it necessary to protect human health.

REPORT DOCUMENTATION PAGEForm Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.

| 14. ABSTRACT Environmental assessments help determine compliance with current environmental regulations. The U.S. Air Force, U.S. Army, Defense Logistics Agency (DLA), and Corps of Engineers (Civil Works) have adopted environmental compliance programs that identify compliance problems before they are cited as violations by the U.S. Environmental Protection Agency. Since 1984, the U.S. Army Construction Engineering Research Laboratory, in cooperation with numerous Department of Defense (DOD) components, has developed environmental compliance assessment checklist manuals. The Environmental Assessment and Management (TEAM) Guide was developed for use by all DOD components. Currently there are five participating DOD components: the Air Force, Air National Guard, Army, Civil Works, and DLA. These agencies have agreed to share the development and maintenance of this Guide. The Guide combines Code of Federal Regulations and management practices into a series of checklists that show legal requirements and the specific operations or items to review. TEAM Guide is supplemented by DOD component-specific manuals detailing DOD component regulations and policies. The New York Supplement was developed to be used in conjunction with the TEAM Guide, using existing New York state environmental legislation and regulations as well as suggested management practices. | | | | | |
