**ABSTRACT:** We provide a checklist of grass flora along with the details of life form a ~ 6922 km<sup>2</sup> area located in the southern part of Assam (Barak valley). This area harbors 98 grass species belonging to 49 genera of the Poaceae. Subfamily Panicoideae (52 species) had the highest number of species followed by Bambusoideae (25 species), Chloridoideae (13 species), Ehrhartoideae (4 species), Centothecoideae (3 species) and Arundinoideae (1 species), while subfamilies like Anomochlooideae, Aristidoideae, Danthonioideae, Pharoideae, Pooideae and Puelioideae were not represented. The region accounts ca. 32% of the diversity of grass flora of the state of Assam.

## INTRODUCTION

Grasses occur in virtually every terrestrial habitat, cover as much as one-fifth of the Earth's land surface (Shantz 1954). The cereals, sugarcane, bamboos, and forage and weedy grasses are of pre-eminent importance in human economy. The grass family (Poaceae) includes approximately 11,000 species in over 700 genera (Chen *et al.* 2006). Bor (1960) has given a major contribution through his consolidated work, which excluded Bambusoideae. The detailed account on bamboos by Gamble (1896) remained the main source to determine the Indian bamboos, although two compilations on Indian bamboos have recently appeared (Tewari 1992; Seethalakshmi and Kumar 1998). At present, in India there are about 1300 grass species distributed in 25 tribes and 263 genera out of 17,500 known flowering plants (Nair and Murthy, 2012).

As far as the North-East India is concerned, Bor (1940) was responsible for the account on grass in *Flora of Assam*. Shukla (1996) has made an account on the grasses of North-Eastern India. Barooah and Borthakur (2003) reported the occurrence of 40 species of bamboos belonging to 10 genera from the state Assam. Chowdhury (2005) listed ca. 303 species of grasses occurring within the ambit of political boundary of Assam. Southern Assam seems to have received very little attention in the above mentioned works and are known through the sporadic reports by Gamble (*l.c.*), Hooker (1897), Bor (*l.c.*), Gupta (1972) and Bhattacharjee (2002).

Aiming to reduce the gap in the knowledge of biodiversity of North-East India, the present study has been carried out to contribute the knowledge of grass flora occurring in Southern Assam.

## MATERIALS AND METHODS

### Study Area

The Southern Assam or Barak Valley (Figure 1) is located between 24°08'–25°08' N and 92°12'–93°15' E. The valley covers an area of 6922 km<sup>2</sup> and is surrounded

by Dima Hasao District and Jaintia Hill in the north, on the east by the Manipur hills and on the south by the Mizoram hills. To the west the plains merge with Sylhet Plains of Bangladesh and Indian state Tripura. At present the region is divided into three administrative districts, namely Cachar, Karimganj and Hailakandi. The region has 12 Reserve Forests and 1 Wild Life Sanctuary comprising a total forest area of about 2339 km<sup>2</sup> i.e., ca. 33.7% of the total geographical area of the valley. The drainage system of southern Assam is fed by 18 major rivers and rivulets, and Barak is the chief river, flowing in the east-west direction through the central part of the valley. The region experiences hot summers interspersed with rains and thunderstorms from May–Sept., while Dec.–Jan. have the lowest temperatures. Rainfall varies between 2500 and 4000 mm, with an average of 143 rainy days per annum; temperature ranges from 7.5°C in winter to 40°C in the summer and humidity of the region varies from 60% to 91%.

The vegetation of the region predominantly consists of tropical wet evergreen to tropical semi-evergreen forest types (Champion and Seth, 1968). Tropical wet evergreen type of forest is prevalent in the northern and eastern slopes of southern Assam like Borail Hill Ranges, Upper and Lower Jiri R.F., Barak R.F. and Inner Line R.F. The dominant tree species of this type of forest are, for example, *Bauhinia acuminata*, *Callicarpa arborea*, *Carallia integerrima*, *Castanopsis lanceifolia*, *Chisocheton cumingianus*, *Duabanga grandiflora*, *Ficus roxburghii*, *Holarhena antidyserterica*, *Mallotus roxburghianus*, *Melia azedarach*, *Microcos paniculata*, *Saurauia roxburghii*, *Schefflera venulosa*, *Sterculia villosa*, *Syzygium cumini*, *Toona ciliata* and *Xerospermum glabratum* (Barbhuiya, *Pers. Obs.*).

Whereas tropical semi-evergreen type of forest is prevalent in southern and western side of southern Assam, viz., Sonai R.F., Katakhal R.F., Singla R.F., Badsha Tilla R.F., Longai R.F., Tilbum R.F., Duhalia R.F. and Patheria R.F. The dominant tree species of this type of forest

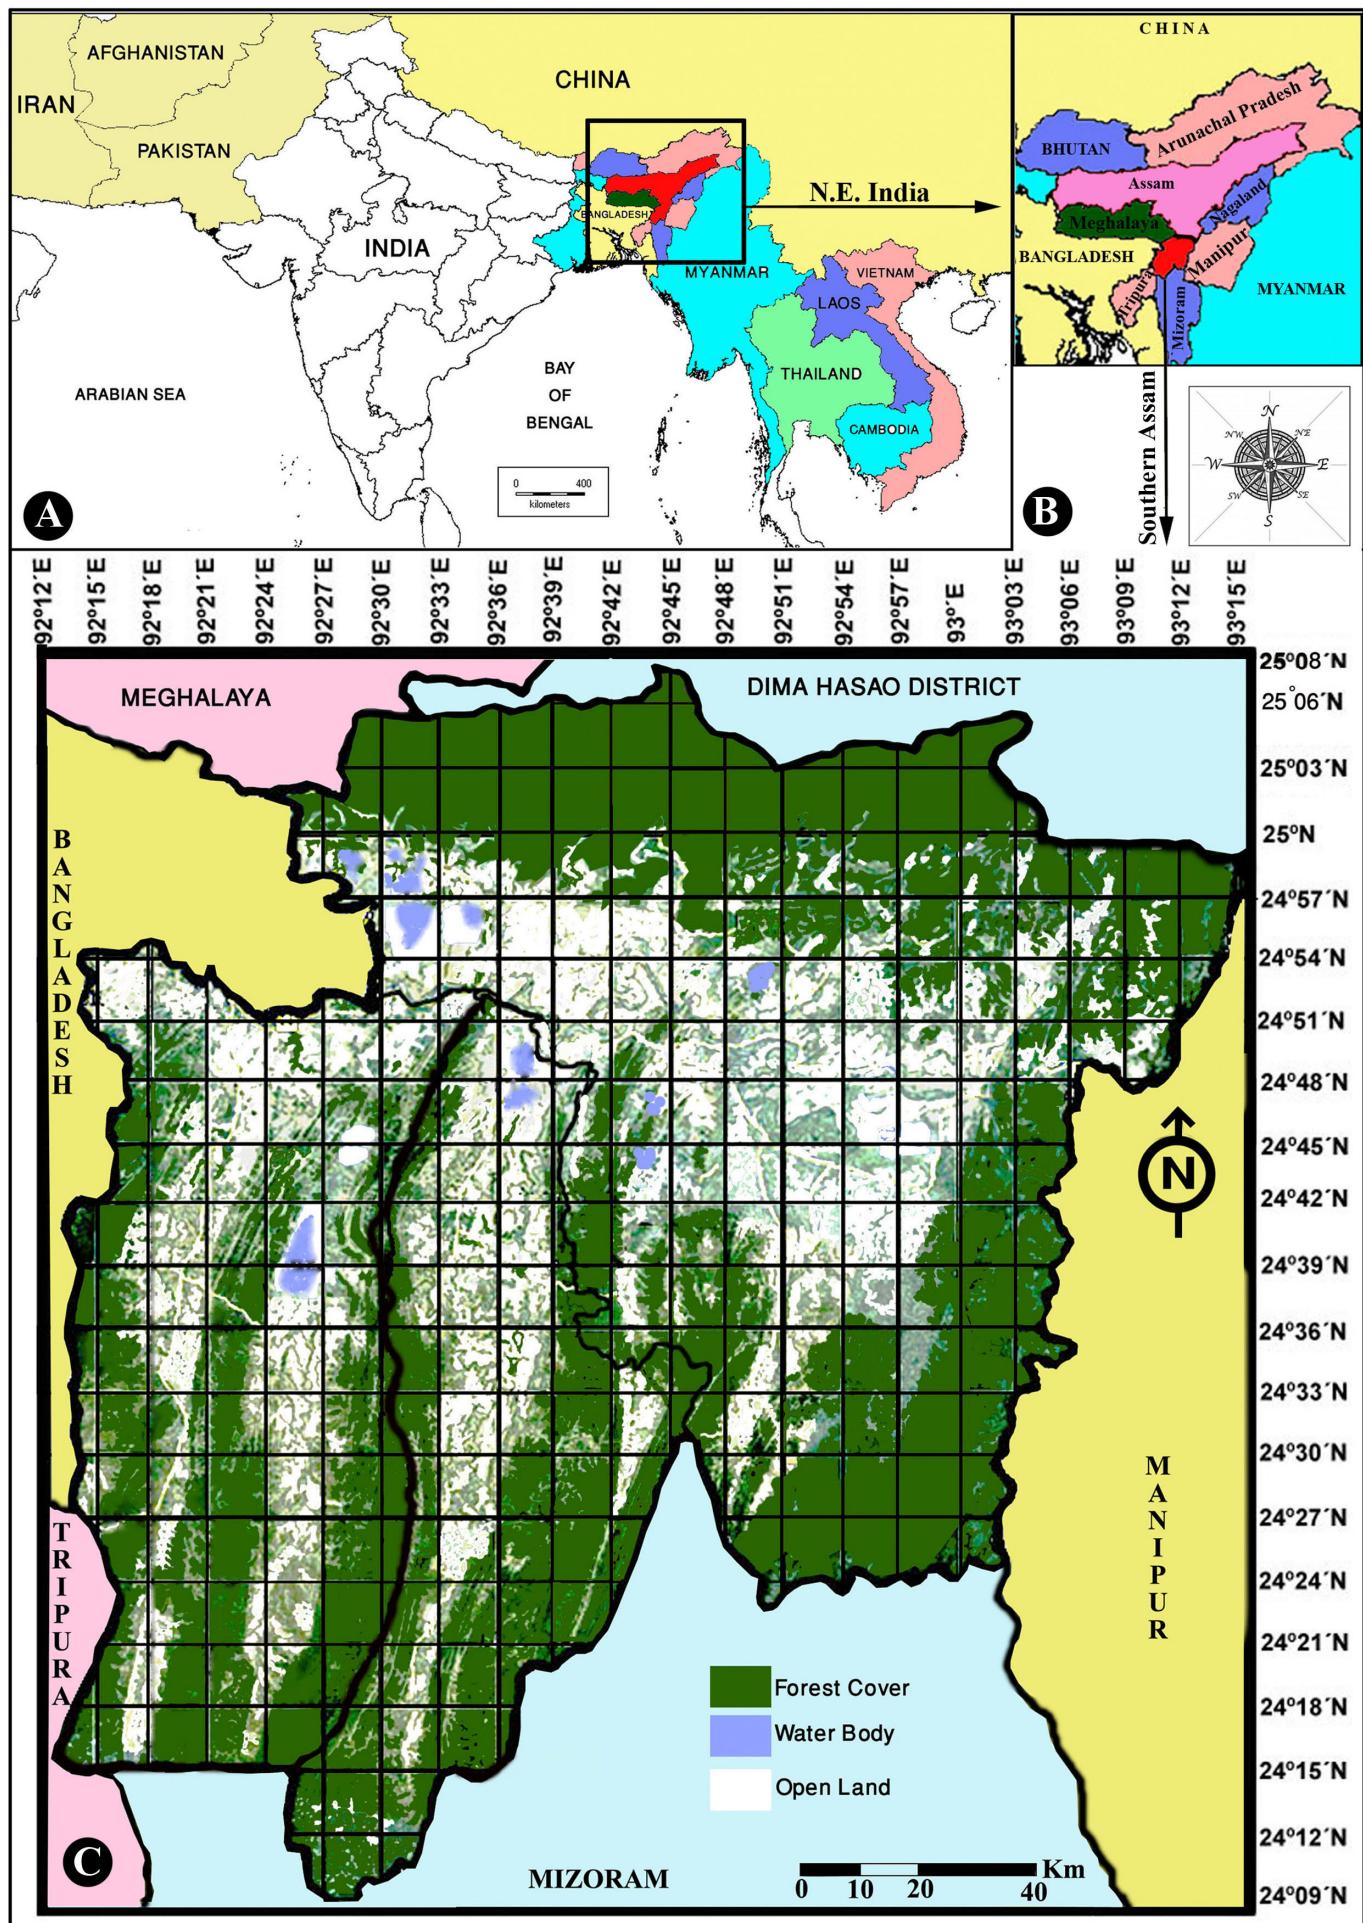

FIGURE 1. A) North-East India; B) Southern Assam; C) Grid map of Southern Assam (Barak Valley).

are, for example, *Schima wallichii*, *Saurauia roxburghii*, *Dipterocarpus turbinatus*, *Albizia procera*, *Gmelina arborea*, *Lagerstroemia speciosa*, *Macaranga denticulata*, *Mallotus nepalensis*, *M. roxburghianus*, *Phyllanthus emblica*, *Ficus bengalensis* and *F. religiosa* (Barbhuiya, Pers. Obs.).

#### Data collection

The species listed here were compiled mainly from the surveys in the years 2010 to 2012 covering all habitat types of the region, particularly in protected areas (Table 1). This was supplemented with a study of all the previous herbarium collections deposited at the Botanical Survey of India, Eastern Regional Centre, Shillong (ASSAM).

#### RESULTS AND DISCUSSION

This qualitative survey revealed the presence of 98 grass species belonging to 49 genera distributed in 6 subfamilies are here classified according to Grass Phylogeny Working Group (GPWG 2001). The number of species known from Southern Assam and the total number of species in the genus are indicated between brackets. Plant binomial along with the local name in the bracket if any, life form, voucher specimen and their location of occurrence are provided in Table 2. Those species were not collected but their presence was recorded by photographs.

#### Systematic overview

##### Subfamily Bambusoideae

Tribe: Bambuseae

Genera: *Bambusa* (10/100) *Dendrocalamus* (4/40) *Dinochloa* (1/30) *Gigantochloa* (3/30) *Melocalamus* (3/5) *Melocanna* (1/2) *Pseudostachyum* (1/1) *Schizostachyum* (2/50)

##### Subfamily Ehrhartoideae

Tribe: Oryzeae

Genera: *Leersia* (1/17) *Oryza* (3/24)

##### Subfamily Arundinoideae

Tribe: Arundineae

Genera: *Phragmites* (1/5)

##### Subfamily Centothecoidae

<b>Total</b>	-	-	<b>2338.65</b>	<b>6922</b>	<b>33.78</b>

Tribe: Centothecae

Genera: *Centotheca* (1/4) *Lophatherum* (1/2)

Tribe: Thysanolaenae

Genera: *Thysanolaena* (1/1)

##### Subfamily Panicoideae

Tribe: Isachneae

Genera: *Isachne* (3/90)

Tribe: Paniceae

Genera: *Acroceras* (2/19) *Axonopus* (1/110) *Brachiaria* (2/3) *Cyrtococcum* (2/11) *Digitaria* (3/250) *Echinochloa* (3/45) *Ichnanthus* (1/30) *Oplismenus* (1/5) *Ottochloa* (1/3) *Panicum* (10/300) *Paspalidium* (1/40) *Paspalum* (2/330) *Pseudoraphis* (1/6) *Sacciolepis* (1/30) *Setaria* (3/130)

Tribe: Arundinelleae

Genera: *Arundinella* (1/60)

Tribe: Andropogoneae

Genera: *Chrysopogon* (2/44) *Coix* (1/4) *Hackelochloa* (1/2) *Hemarthria* (2/12) *Imperata* (1/11) *Polygonatherum* (1/4) *Saccharum* (4/40) *Themeda* (1/27) *Vossia* (1/1)

##### Subfamily Chloridoideae

Tribe: Cynodonteae

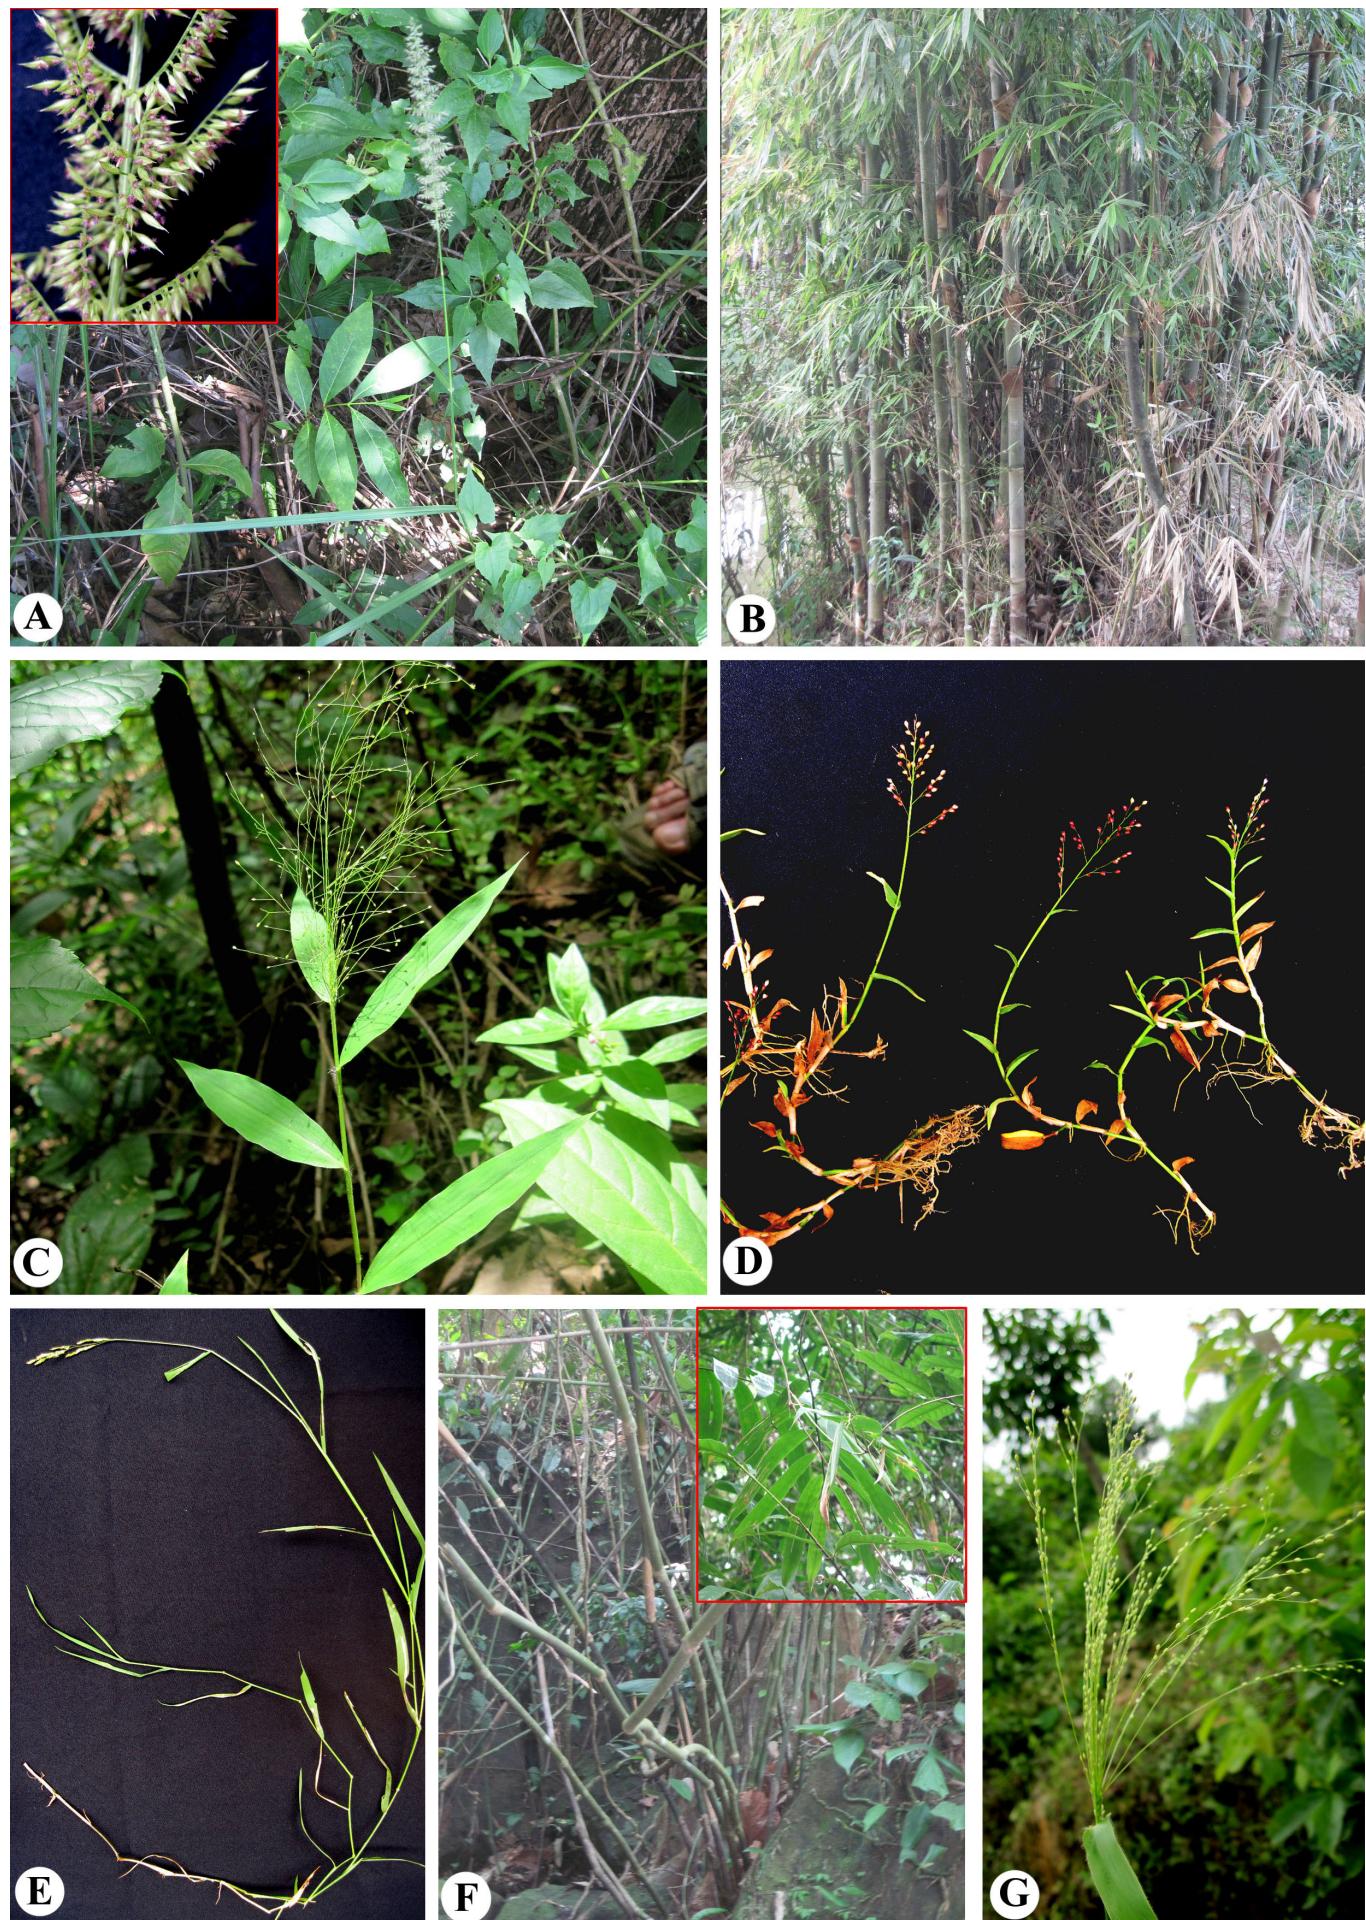

Genera: *Chloris* (1/55) *Cynodon* (1/10) *Enteropogon* (1/19)

Tribe: Eragrostideae

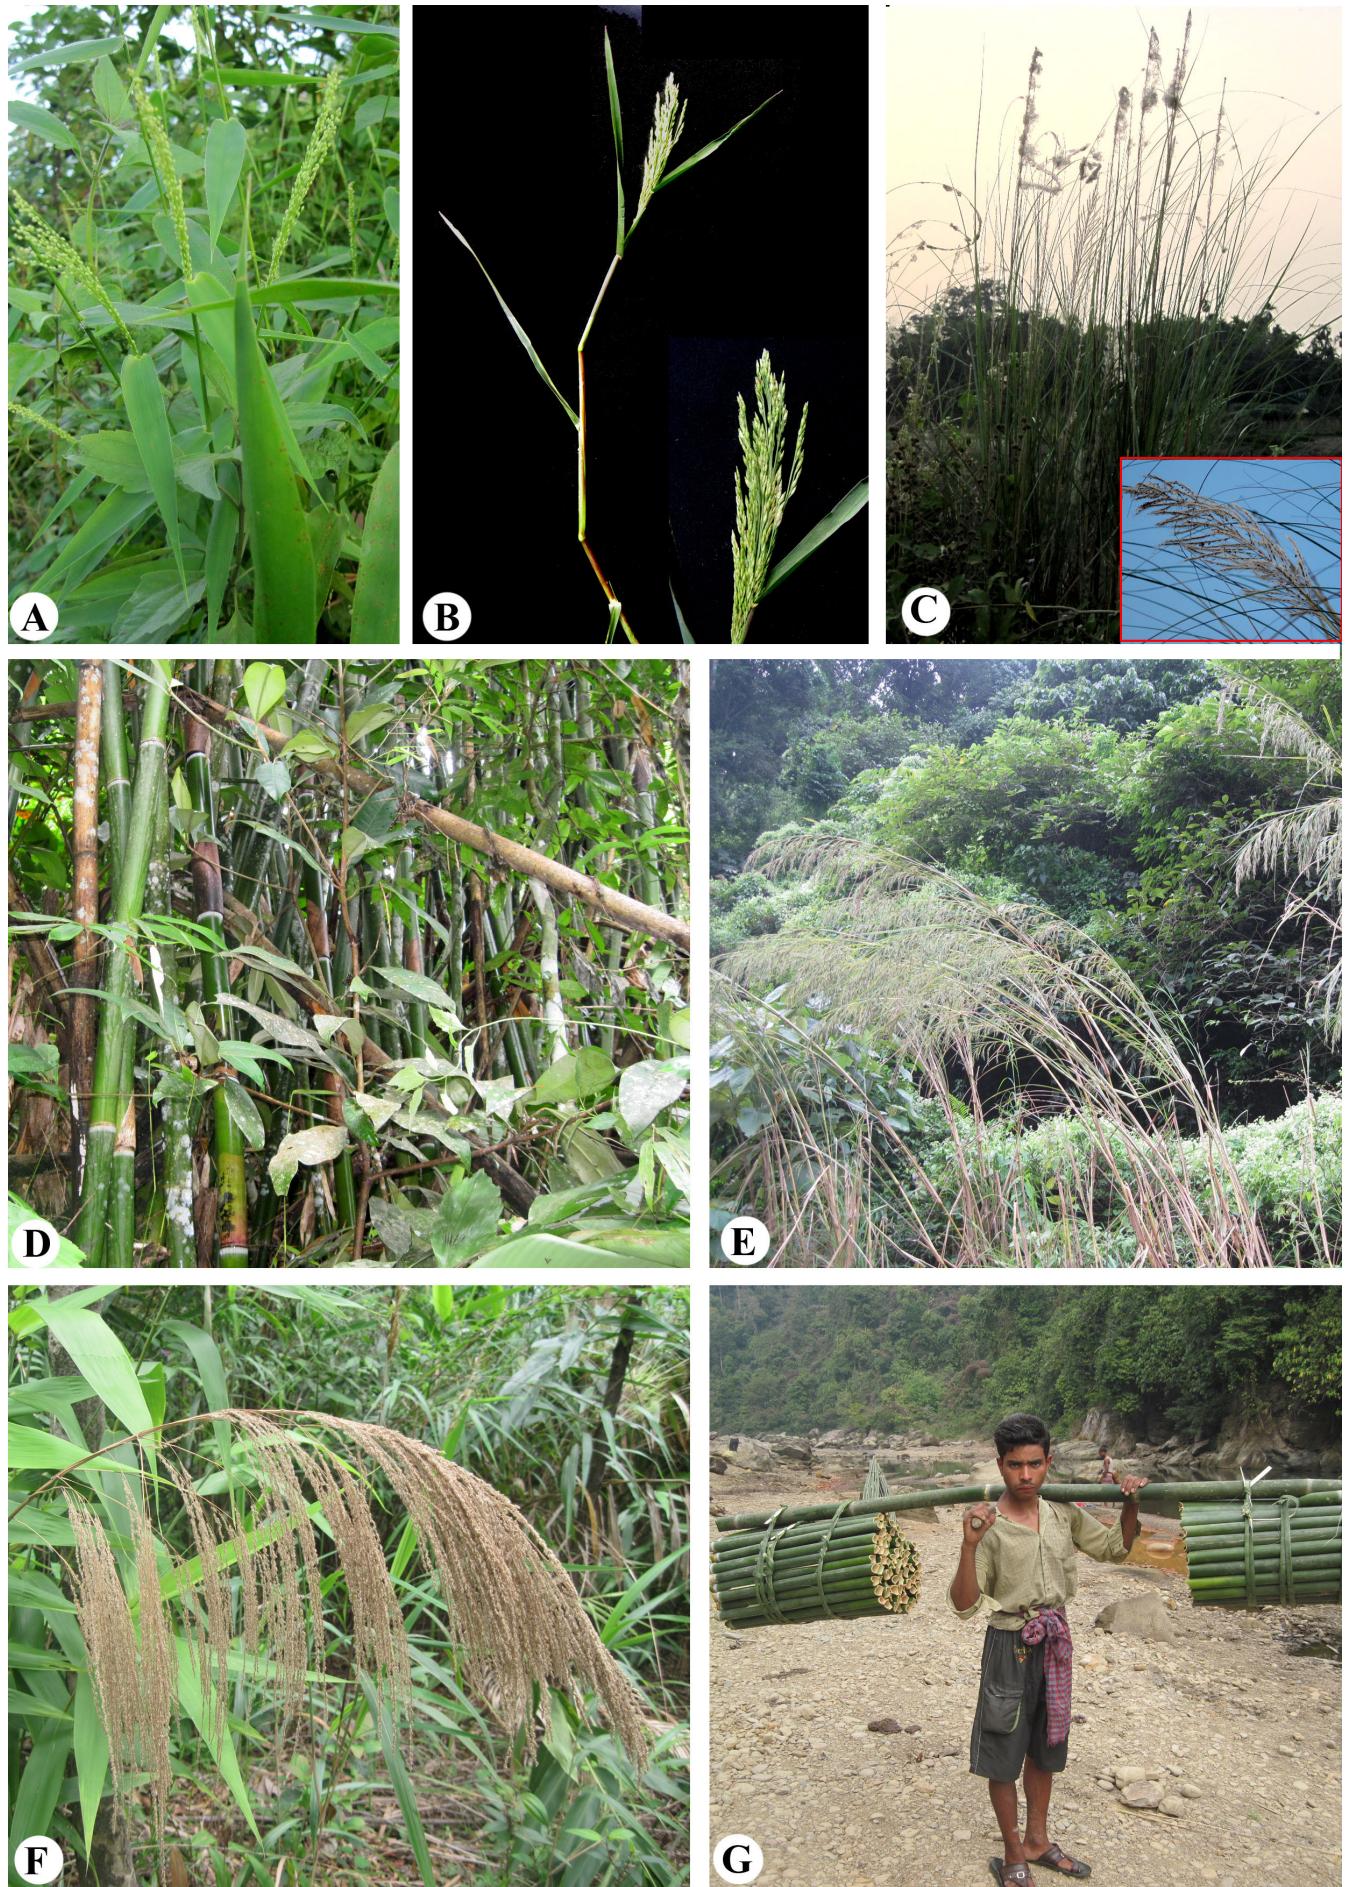

Genera: *Acrachna* (1/3) *Eleusine* (1/10) *Eragrostis* (2/350) *Leptochloa* (2/31) *Neyraudia* (1/52) *Sporobolus* (3/160)

#### Concluding remarks

Grasslands occur in alluvial plains and riparian flats throughout the valley and generally inundated every year during the monsoon period. The study has revealed the occurrence of 98 grass species belonging to 49 genera of the Poaceae in Southern Assam, which accounts ca. 32% of the diversity of grasses of the state of Assam. On the other hand, bamboos are used as the major source of fibers in local Paper Mill and, in the need of fulfilling the demands, many indigenous bamboo species (e.g. *Bambusa balcooa*, *Bambusa cacharensis*, *Bambusa polymorpha* etc.) are becoming rarer and finally approached to Near Threatened (eg. *Dendrocalamus hamiltonii*).
