

**Project Rapid-Field Identification of *Dalbergia* Woods and Rosewood Oil
by NIRS Technology –NIRS ID.**

The project has been financed by the CITES Secretariat with funds from the European Union

Consulting objectives: TO SELECT INTERNATIONAL OR NATIONAL XYLARIUM OR WOOD COLLECTIONS REGISTERED AT THE INTERNATIONAL ASSOCIATION OF WOOD ANATOMISTS – IAWA THAT HAVE A SIGNIFICANT NUMBER OF SPECIES AND SPECIMENS OF THE GENUS *DALBERGIA* TO BE ANALYZED BY NIRS TECHNOLOGY.

Consultant: VERA TERESINHA RAUBER CORADIN Dra

1 INTRODUCTION

The Project "Rapid and field identification of *Dalbergia* wood and Rosewood oil by NIRS technology" aims to: 1) build models for wood identification/classification from 20 *Dalbergia* species and 2) build an exploratory identification model for rosewood oil (*Aniba roseodora*).

To build models that make it possible to identify/classify woods from 20 *Dalbergia* species as proposed in the project, it is necessary to obtain spectra from a large number of wood samples (ca. 50) from different specimens of each species of the *Dalbergia* genus. To achieve this goal, spectra will be collected from wood samples deposited at the international wood collections of the Royal Botanical Gardens, Kew (London / England); Smithsonian Museum (Washington / USA); CIRAD (Montpellier, France); Hamburg (Germany); and the People's Republic of China (Beijing), as previously planned in the scope of the project. In addition, spectra will also be obtained from the national wood collections as the Botanical Garden - R-Bw (Rio de Janeiro); IPT-BCTw (São Paulo); INPA - INPAw (Manaus), and Belém - RBHw (Belém).

To create robust identification models for about twenty species of the *Dalbergia* genus, as accounted in the project, it is necessary to obtain spectra from the largest possible number of specimens per species and to check for which species there is enough material and which xylaria are likely to be visited to obtain spectra. For this, it is necessary to carry out an updated survey on the Brazilian and international xylaria to check the material available in the collections to be sampled.

2 THE SPECIES OF THE GENUS *DALBERGIA*

The genus *Dalbergia* L.f, belonging to the Fabaceae family (Leguminosae-Papilionoideae), occurs naturally in the tropical regions of Asia, Africa, Central America, South America, and the Caribbean. The number of species in this genus is not yet defined, and ongoing research with different technologies to identify this large and dominant group of species is still under progress. The Plant List, a database produced in collaboration between the Royal Botanic Gardens, Kew, and Missouri Botanical Garden www.theplantlist.org/tpl1.1/search?q=dalbergia which presents plant species from around the world, lists 648 *Dalbergia* species with different status: **accepted**; **synonym**; and **unresolved**, of which only 287 are considered as accepted species. At www.worldfloraonline.org, a Consortium of botanical research institutions from various continents, 726 entries for the genus *Dalbergia* are also presented with different statuses. The International Legume Database Information Service ILDIS established by legume specialists ildis.org has 445 *Dalbergias* listed, also with different types of status: **accepted**, **synonym**, and **provisional**. To check the status of each of the species listed in ILDIS, it is necessary to do a species search. Brazilian Flora, maintained by the Instituto Rio de Janeiro Botany Garden, considers 39 species of the *Dalbergia* genus as valid, 21

of which are endemic to Brazil; and 13 synonyms, with species at the level of variety and sub-species. The Tropicos database of the Missouri Botanical Garden/USA www.tropicos.org/nameSearch lists 607 entries for the genus, and like the other websites, it is necessary to do an individual search to find out the number of species considered accepted. The websites' information analyzed, points to a very diversified genus and still has many uncertainties in identifying species. Also, the exact number of valid species can only be established by exploring a comprehensive bibliography of taxonomic research.

Dalbergias can exhibit multiple habits; they can grow as trees, shrubs, vines/winding/climbing plants. The Rapid-Field Identification of *Dalbergia* woods and Rosewood Oil by NIRS Technology - NIRS ID project will focus on wood-producing trees species, especially those frequent in international trade. Many tree species of this genus are economically important due to their woods' high quality, notably used in the manufacture of musical instrument components. However, overexploitation, predatory exploration, and habitat fragmentation is often a cause of species becoming endangered in the tropics. *Dalbergia nigra*, commercially called jacarandá-da-Bahia, is the most wanted species within the genus; it became highly threatened by the international trade, culminating in its inclusion in CITES **APPENDIX I** in 1992; therefore, illegal to harvest. The large volume of wood traded in the international market, belonging to additional *Dalbergia* species, continued to be very expressive and, in 2017, led CITES signatory countries to include all species of the genus *Dalbergia* in **APPENDIX II** (UNEP-WCMC 2014).

Considering that it is necessary to enforce international legislation with the inclusion of the genus in **APPENDIX II**, species identification is the first step to control international trade. A large number of species, a wide geographic distribution, and a significant similarity of the woods to each other make international trade face great difficulty in differentiating *Dalbergia* woods from each other and, in many cases, determining their origin. Since in international trade, for commercial purposes, wood species are found as logs or previously prepared pieces, lacking leaves, seeds, and flowers, so it is necessary to use precise identification methods that can be carried out at checkpoints.

There are several methods of identification, including genetic, chemical, and visual methods. Most methods require the sample to be transported to a laboratory for analysis. The most used method in practice for species identification is wood anatomy, with the use of various tools and resources to facilitate identification such as CitesWood ID 2014; identification keys, such as CORADIN et al. (2010); and remote identification in which images are captured in loco, transmitted to the laboratory for the anatomist to carry out the identification in real-time. However, the wood anatomy within *Dalbergia* species is very similar, making it difficult for enforcement agents to separate them and often incur misidentification. The identification by wood anatomy requires highly qualified technical personnel with knowledge of wood anatomy, which

is only possible with several years of experience in the area, considering the diversity of wood producing species.

3 MATERIAL AND METHODS

3.1 NIRS METHODOLOGY AND SPECTRA COLLECTION

The NIRS methodology can be an excellent tool with the advantage of almost eliminating human error and can be used as a rapid identification method in the field, with accurate and real-time response, given that it is based on a robust spectral database to create species identification models.

To obtain spectra and construct the model, it is necessary to obtain multiple samples previously identified by an experienced botanist or wood anatomist. One way of obtaining spectra is collecting samples in the field, which is impracticable due to the wide distribution of the species, the high costs involved, and the collecting restrictions imposed by the endangered species native country's laws and international regulations.

Another strategy for obtaining the spectra is to use material from the biological collections of wood or xylaria, which have samples previously identified by experienced botanists or wood anatomists.

In the project "Rapid-Field Identification of *Dalbergia* Woods and Rosewood Oil by NIRS Technology - NIRS ID," samples from xylaria registered in the **Index Xylariorum**, a list recognized by the Brazilian and international scientific community, will be used as an alternative to obtaining the spectra necessary to build the database to be used in the development of identification models.

3.2 CRITERIA FOR SELECTING XYLARIA TO BE VISITED TO COLLECT SPECTRA

The selection of xylaria was carried out based on **Index Xylariorum 4.1**, edited by the International Association of Wood Anatomists - IAWA (2016). To choose xylaria within the universe of wood collections available in the Index, some selection criteria were adopted: (1) prioritizing Brazilian collections, collections in Central and North America that are regions of the natural occurrence of species of the genus, and (2) collections from Europe, where xylaria include a large number of samples from tropical countries and (3) a collection from Asia that is also an area of occurrence of species of the genus *Dalbergia* and already expected in the project.

Among Brazilian xylaria, some that have not yet been registered in the Index Xylariorum were included and contacted; therefore, practically all Brazilian xylaria with a considerable number of *Dalbergia* specimens were selected. The xylarium of Vale

Corporation and of Cacao Research Center CEPEC, despite having a small number of samples, were kept because they are located in *Dalbergia nigra*'s natural habitat. It was also considered the existence of *Dalbergia* species' plantations to collect samples scheduled for 2020. The xylarium of the Federal University of Bahia will be included in this report later since its curator did not have access to the archives due to the period of quarantine caused by the Coronavirus pandemic.

For the selection of international xylaria, it was initially considered the collection's size and specialization, and the feasibility of carrying out visits within the project's scope. The selected xylaria from Europe have more than 20,000 samples per wood collection, ranging from 20,000 to 125,000 specimens, such as the Leiden xylarium (Netherlands), which brings together several collections in the same place. Some of these xylaria are quite generalist, but other collections can be specialized in some regions. The CIRAD Research Center in Montpellier - France, for example, has material concentrated in Africa and Asia, and the Tervuren (Belgium) collection concentrates African species.

The survey started with the xylarium with information available online, and those that do not have online data, the curators were contacted to obtain the information. Due to the COVID 19 pandemics, it has not yet been possible to obtain information from two large xylaria: that of the Thünner Institute in Germany and the xylarium in Beijing in China. Both curators have already responded positively to the project's technical team's visit, and the information will be added to the database as soon they are shared by the curators.

The data of each xylarium are presented in spreadsheets according to the information provided on the web pages or in the form provided by the curators. To analyze the information necessary to plan the project's activities, a consolidated spreadsheet was prepared for the national and international collections **APPENDIX III**. This spreadsheet contains the species, the number of samples, and the xylarium where these samples are available.

3.3 TERMINOLOGY

To better understand the information in the spreadsheets and in the report, some definitions of the technical terminology adopted are as follows:

Species: the basic taxonomic unit of the classification system.

Specimen: it is "any individual of a **species**" or any sample of material from an organism. In xylaria the reference numbers refer to the individuals from which the sample was obtained.

Xylarium: a collection of wood material that adopts a botanical identification system to classify the sample in the collection and has a curator who organizes and manages the

collection. To make xylarium official, they must be registered in the Index Xylariorum under the International Association of Wood Anatomists - IAWA.

Acronyms of xylaria: every wood collection registered in the Index Xylariorum receives an acronym by which it is identified. It is composed of combining the abbreviation chosen by the Institution and the letter "w" for wood. Example: the xylarium of the Botanical Garden of Rio de Janeiro (RBw). "RB" was chosen in honor of the botanist Barbosa Rodrigues.

***Dalbergia* sp:** a sample with this identification means that it was determined down to the genus level without identifying the species.

Models for sample information: Two models of tables have been suggested to present the sample information in xylaria and the respective spectral data obtained. The information of each sample and the visualization of the respective spectral data presented in the same spreadsheet will facilitate the traceability and analysis of the data. In model 1: the information of specimens of a given species, obtained in a xylarium, will be made available, together with the corresponding spectral data. In model 2: the sum of the information of all the specimens analyzed, by species, in the different xylaria will be made available. See the example of the two table models for the species *D. cearensis* in Product 4.

4 RESULTS

4.1 CONTACTED XYLARIA FOR THE COLLECTION'S SURVEY

4.1.1 BRAZILIAN XYLARIA

1. BRASÍLIA: Dr. Harry van der Slooten Wood Collection, Forest Products Laboratory, Brazilian Forest Service SFB/MAPA, (**FPBw**).
2. BELÉM: Walter Alberto Egler Wood Collection, Emilio Goeldi Museum – Research Campus, Botany Department, (**MGw**).
3. BELÉM: CPATU wood collection (no record in the Index Xylariorum, awaits information).
4. BOTUCATU: "Profa. Dra. Maria Aparecida Mourão Brazil" Wood Collection, São Paulo State University Júlio de Mesquita Filho (UNESP, (**BOTUw**)). (insufficient samples).
5. CAMPOS: The State University of Northern Rio de Janeiro Wood Collection UENF (no record in the Index Xylariorum, insufficient samples).
6. CURITIBA: Federal University of Paraná Wood Collection (UFPR) (no record in the Index Xylariorum).
7. ILHEUS: CEPEC Herbarium, Botany Division, Cacao Research Center, (**CEPECw**) (available samples, awaits information).
8. LINHARES: Vale Corporation Forest Reserve CVRD Wood Collection, (**CVRDw**).
9. MANAUS: National Institute for Amazonian Research Wood Collection, (**INPAw**).
10. PIRACICABA: Luiz de Queiroz College of Agriculture ESALQ Wood Collection, (**ESAw**) (no reply).
11. RECIFE: Sergio Tavares Wood Collection, Federal Rural University of Pernambuco, Forest Science Department (**SUDENEw, TIPw**) (closed xylarium).
12. RIO DE JANEIRO: Rio de Janeiro Botanical Garden Research Institute Wood Collection, (**RBw**).
13. RIO DE JANEIRO: Rio de Janeiro State University Wood Collection - UERJ. (without record in the Index Xylariorum, insufficient samples).
14. SEROPÉDICA: Forest Products Department, Federal Rural University of Rio de Janeiro, Institute of Forestry, Department of Forest Products Wood Collection, (**FPDw**) (xylarium temporarily closed due to fire).
15. SALVADOR: The Padre José Pereira de Sousa Wood Collection, Salvador, Bahia, Brazil (**PJPSw**) (samples available, awaits information).
16. SÃO PAULO: Dr. Calvino Mainieri Wood Collection, Institute for Technological Research of São Paulo S.A. - IPT (**BCTw**)
17. SÃO PAULO: Nanuza Luiza de Menezes Wood Collection, University of São Paulo (USP) Institute of Biosciences (IB-USP), Department of Botany, (**SPFw**).
18. SÃO PAULO: Botany Institute of São Paulo Wood Collection, (**SPw**).

19. SÃO PAULO: Forest Institute of São Paulo Wood Collection, (**SPSFw**).

4.1.2 INTERNATIONAL XYLARIA

1. BELGIUM - TERVUREN: Tervuren Xylarium, Royal Museum for Central Africa, (**Tw**).
2. CHINA - BEIJING: The Research Institute of Wood Industry (CRIWI), Chinese Academy of Forestry - CAF, (**CAFw**). ENGLAND - KEW: Jodrell Laboratory, Royal Botanic Gardens Kew, (**K-Jw**).
3. ENGLAND – KEW: Jodrell Laboratory, Royal Botanic Gardens Kew, (**K-Jw**).
4. FRANCE - MONTPELLIER: CIRAD, (**CTFw**).
5. GERMANY - HAMBURG: Thünen Institute of Wood Research (The Johann Heinrich von Thünen Institute, Federal Research Institute for Rural Areas, Forestry and Fisheries, (**RBHw**). (already contacted, no information about the collection).
6. MEXICO - MEXICO Dr. Ramon Echenique-Manrique, Wood Collection Instituto de Biologia, Universidad Nacional Autonoma de Mexico, (**MEXUw**).
7. MEXICO: National Xylaria, Seccion de Anatomia de Maderas, Instituto Nacional de Investigaciones Forestales, (**MEXFw**) (wood collection closed, in the process of being incorporated into UNAM).
8. MEXICO, XALAPA: "Dr. Faustino Miranda" Wood Collection, Instituto de Ecologia, A.C., (**XALw**) (insufficient samples).
9. NETHERLANDS - LEIDEN: Naturalis Biodiversity Center (**Dw, Lw, RTIw, Uw, WAGw, WLw, WIBw**).
10. UNITED STATES - MADISON: Forest Products Laboratory Wood Collection and Samuel J. Record Memorial Wood Collection, USDA Forest Service, Forest Products Laboratory, (**MADw, SJRw**). (spectra for *Dalbergia* were already collected by the project staff).
11. UNITED STATES - RALEIGH: The David A. Kribs Wood Collection, Department of Wood and Paper Science, College of Natural Resources, North Carolina State University, (**PACw**) (*Dalbergia* wood samples of this collection are duplicates from the Madison collection).
12. UNITED STATES - WASHINGTON: Department of Botany, National Museum of Natural History, Smithsonian Institution, (**USw**).

4.2 SELECTED XYLARIA

According to the criteria used, ten Brazilian wood xylaria and ten international xylaria were selected. Brazilian xylaria: (**FPBw**); (**MGw**); (**UFPR**); (**CEPECw**); (**CVRDw**), (**INPAw**), (**RBw**), (**PJPSw**), (**BCTw**), (**SPSFw**). International xylaria: (**RBHw**), (**Tw**); (**CAFw**); (**MADw**,

SJRw); (CTFw); (Dw, Lw, RTlw, Uw, WAGw, WLw, WIBw); (K-Jw). , (MEXUw, MEXFw); (XALw). The tables' results do not include information from the international xylaria of the Thünen Institute of Wood Research (**RBHw**), BEIJING (**CAFw**), Xil. Nacional (**MEXFw**) and the national xylaria from Bahia UFBA (**PJPSw**) for the lack of information due to the Coronavirus pandemic.

4.3 RESULTS OF THE SURVEY OF *DALBERGIA* SAMPLES IN THE BRAZILIAN XYLARIA

In the collection of the ten Brazilian xylaria in **APPENDIX I**, 480 specimens of the genus *Dalbergia* are registered, with 417 specimens identified at the species level, comprising 38 species, of which 23 are from Brazil and the remaining from Asia and Africa and 63 specimens identified at the genus level. Table 1 shows the Brazilian collections with the respective numbers of *Dalbergia* samples, the number of species, and the number of identifications up to the genus level. Table 2 shows the number of specimens by species and occurrence according to the xylaria data. The complete information of the Brazilian xylaria is presented in **APPENDIX I**. In **APPENDIX III**, a consolidation of the data of all Brazilian and international xylaria is presented with the number of specimens per species, the origin, and the registration number of each specimen, which will be necessary for planning the technical visits to obtain the spectra.

Table 1. Brazilian Xylaria in descending order of *Dalbergia* samples.

Xylaria	No. of specimens	No. of species	No. of samples identified to genus level
IPT - BCTw	167	20	28
JBRJ - RBw	128	24	15
LPF - FPBw	55	17	05
Forest Institute - SPSFw	47	12	09

<i>D. lineata</i>	1	Brazil
<i>D. paniculata</i>	1	India
<i>D. riedelii</i>	1	No information
<i>D. subcymosa</i>	1	Brazil, Pará
<i>D. tucurensis</i>	1	Honduras

4.4 RESULTS OF THE SURVEY OF *DALBERGIA* SAMPLES IN THE INTERNATIONAL XYLARIA

Among the eight International xylaria 1,228 specimens of the genus *Dalbergia* were accounted, with 940 specimens identified at the species level comprising 103 species, 13 specimens with questionable identification, and 185 specimens at the genus level. Among the specimens identified at the species level, 18 have up to 15 individuals per species, and the vast majority have less than ten individuals per species. The collection with the largest number of samples of *Dalbergia* is that of CIRAD CTFw, followed by MADISON (MADw, SJRw), Tervuren Tw, and Kew K-Jw with more than one hundred specimens of the genus *Dalbergia* Table 3. In the international collections presented in Table 4 species from Africa and Asia predominate and, to a lesser extent, species from

South and Central America, and the Caribbean. Eleven species native to Brazil are represented in international wood collections, which are in descending order of specimen number: *D. nigra* 81, *D. frutecens* 34, *D. cearensis* 19, *D. spruceana* 15, *D. villosa* 07, *D. glauca* 06, *D. decipularis* 05, *D. glaucecens* 03, *D. brasiliensis* 01, *D. foliosa* 01, and *D. violacea* 01.

Table 3. International Xylaria in descending order of *Dalbergia* samples.

Xylaria	No. of specimens	No. of species	No. of samples identified to genus level
FRANCE - MONTPELLIER: CTFw	407	52	64
UNITED STATES – MADISON: MADw, SJRw	368	67	80

<i>Dalbergia lactea</i>	1	Africa
<i>Dalbergia lanceolata</i>	1	No information
<i>Dalbergia lemurica</i>	1	Africa/Madagascar
<i>Dalbergia lindeniana</i>	1	South America/
<i>Dalbergia lineata</i>	1	South America/Brazil
<i>Dalbergia mammosa</i>	1	Tropical Asia/Indochina
<i>Dalbergia melanocardium</i>	1	Central America/Mexico
<i>Dalbergia minahassae</i>	1	Tropical Asia/Philippines
<i>Dalbergia miscolobium</i>	1	South America/Brazil
<i>Dalbergia nigrescens</i>	1	Tropical Asia/Thailand
<i>Dalbergia orientalis</i>	1	Africa/Madagascar
<i>Dalbergia paniculata</i>	1	Tropical Asia/India
<i>Dalbergia pseudobaroni</i>	1	No information
<i>Dalbergia riparia</i>	1	South America/Peru
<i>Dalbergia toxicaria</i>	1	Africa/Madagascar
<i>Dalbergia tsiandalana</i>	1	Africa/Madagascar
<i>Dalbergia violacea</i>	1	South America/Brazil

Table 5. Species with more than ten specimens considering the samples of all Xylaria in APPENDIX III.

Species	No. of samples	Origin
<i>D. nigra</i>	165	South America/Brazil, Southeast, Northeast
<i>D. frutescens</i>	116	South America/Brazil
<i>D. latifolia</i>	116	Asia/India, China
<i>D. sissoo</i>	87	Asia/India
<i>D. melanoxydon</i>	79	Africa/Tanzania, Senegal
<i>D. arbutifolia</i>	70	Africa/Tanzania
<i>D. retusa</i>	69	Central America, Mexico
<i>D. cearensis</i>	63	South America/Brazil, Northeast
<i>D. spruceana</i>	48	South America/Brazil, Amazonas, Pará
<i>D. oliveri</i>	35	Asia/Vietnam, Cambodia
<i>D. decipularis</i>	34	South America/Brazil, Bahia, Ceará
<i>D. purpurascens</i>	31	Africa/Madagascar
<i>D. cochinchinensis</i>	31	Asia/Vietnam, Cambodia, Laos
<i>D. greveana</i>	30	Africa/Madagascar
<i>D. madagascariensis</i>	26	Africa/Madagascar
<i>D. stevensonii</i>	26	Central America
<i>D. miscolobium</i>	20	South America/Brazil, Midwest, Southeast
<i>D. ecastaphyllum</i>	20	Africa/ Congo
<i>D. monticola</i>	19	Africa/Madagascar
<i>D. tucurensis</i>	18	Central America
<i>D. lanceolaria</i>	14	Asia/ Sri Lanka
<i>D. monetaria</i>	14	South America/Suriname, Guyana
<i>D. brasiliensis</i>	14	South America/Brazil
<i>D. cultrata</i>	13	Asia/Myanmar
<i>D. chlorocarpa</i>	11	Africa/Madagascar

5 CONCLUSION AND RECOMMENDATIONS

The results presented in **Tables 1, 2, 3, 4** and **APPENDICES I, II, and III** show that there is a large number of *Dalbergia* samples deposited in xylaria around the world, but the majority with a restricted number of specimens. Only twenty-five species have more than ten specimens (Table 5), and among them, seven are from Brazil.

In addition to the xylaria sampled in this work, contacts were made with curators of international and national xylaria not available online. Some curators do not have access to the information due to the Coronavirus pandemic. As soon as the institutions'

work returns to normal, this information can be added. With the inclusion of information from the international xylaria of Hamburg (RBHw), Beijing (CAFw), and the Brazilian collections of Belém CPATU and Salvador (PJPSw), the number of specimens for many species is expected to increase.

To build a robust and safe identification model for *Dalbergia* species in international trade, we suggest collecting *Dalbergia* spectra from all naturally occurring continents of the genus (i.e., Africa, Asia, South and Central Americas) and choose the best-represented species (i.e., twenty-five species with more than ten samples per species), presented in Table 5.

With the information provided in this work and the data from the important xylaria mentioned above, it will be possible to plan the project's next stages.

It is important to emphasize that it is necessary to review the scientific nomenclature of the species in the collections, to be in accordance with the taxonomic advances within this group. Some inconsistencies were observed in the xylaria databases, which indicate the need for this review. On the other hand, it is worth recognizing that taxonomists visit herbariums more frequently than xylaria resulting in the outdated information of the Xylaria. Species placed in synonym, for example, can change the number of specimens per species and, if they remain with the outdated nomenclature, it can induce inaccurate results.
