

CONVENTION ON INTERNATIONAL TRADE IN ENDANGERED SPECIES
OF WILD FAUNA AND FLORA

Twenty-sixth meeting of the Plants Committee
Geneva (Switzerland), 5 – 9 June 2023

Compliance

Review of Significant Trade in specimens of Appendix-II species

SELECTION OF NEW SPECIES/COUNTRY COMBINATIONS FOR REVIEW FOLLOWING COP19

1. This document has been prepared by the Secretariat.
2. In Resolution Conf. 12.8 (Rev. CoP18) on *Review of Significant Trade in specimens of Appendix-II species*, the Conference of the Parties:
 1. *DIRECTS the Animals and Plants Committees, in cooperation with the Secretariat and experts, and in consultation with range States, to review the biological, trade and other relevant information on Appendix-II species subject to significant levels of trade, to identify problems and solutions concerning the implementation of Article IV, paragraphs 2 (a), 3 and 6 (a)...*
 3. In accordance with paragraph 1 a) of that Resolution (under the section Stage 1 – *Selection of species/country combination to be reviewed*), the Secretariat requested the World Conservation Monitoring Centre of the United Nations Environment Programme (UNEP-WCMC) to produce the following:
 - a) a summary from the CITES Trade Database of annual report statistics showing the recorded level of direct exports for Appendix-II species over the five most recent years (see Annex 1), and
 - b) an extended analysis of trade to inform the preliminary selection of species/country combinations (see Annex 2).
 4. The extended analysis outlines the process used to identify candidate taxa for inclusion in the Review of Significant Trade based on the guidance contained in Annex 2 to Resolution Conf. 12.8 (Rev. CoP18) and presents a list of possible candidate species/country combinations thus identified. The data used to prepare this summary are available in Excel format in an information document.
 5. Paragraph 1 b) of Resolution Conf. 12.8 (Rev. CoP18) directs the Plants Committee to include at its first regular meeting following a meeting of the Conference of the Parties a limited number of species/country combinations of greatest concern for inclusion in Stage 2 of the review process.

Recommendation

6. The Committee is invited to select a limited number of species/country combinations of greatest concern for inclusion in Stage 2 of the Review of Significant Trade.

Selection of species for inclusion in the *Review of Significant Trade following CoP19*

Summary output: Flora

Selection of species for inclusion in the Review of Significant Trade following CoP19. Summary output: Flora

Overview

To comply with Stage 1 a) of Resolution Conf. 12.8 (Rev. CoP18) and the *Guidance regarding the selection of species/country combinations* outlined in Annex 2 of the Resolution, the UN Environment Programme World Conservation Monitoring Centre (UNEP-WCMC) has produced two outputs to assist the Plants Committee with their work in selecting species/country for inclusion in the Review of Significant Trade following CoP19:

- A **summary output** (this document), which provides an overview of direct trade over the most recent five years (2017-2021) in wild-sourced and source unknown specimens of CITES-listed taxa, in addition to trade in specimens of plants that fulfil the definition for ‘assisted production’ in Resolution Conf. 11.11 (Rev. CoP18) and trade in specimens without a source specified.
- An **extended analysis**, which uses five criteria to identify taxa that show noteworthy patterns of trade (see PC26 Doc 16.5 Annex 2).

The summary output is accompanied by an excel version of the data available as an information document, which details gross direct exports for each individual country between 2017-2022 and provides further details regarding quotas and trade suspensions.

Data used in the summary output

Data were extracted from the CITES Trade Database (trade.cites.org) on 20th March 2023, and include all CITES Annual Reports received by UNEP-WCMC by 23rd February 2023.

Table 1: Data included for the summary output

	Data included
Distribution status	Trade data for all distribution statuses except for species-exporter combinations where the species has been introduced, according to Species ¹
CITES Trade Database report type	Gross exports; direct trade only (re-exports are excluded)
Current Appendix	Appendix II taxa and Appendix I taxa subject to reservation
Source codes²	Wild ('W'), specimens of plants that fulfil the definition for ‘assisted production’ in Resolution Conf. 11.11 (Rev. CoP18) ('Y'), unknown ('U') and no reported source ('-')
Purpose codes²	All
Terms³	bark, carvings, chips, cultures, derivatives, dried plants, extract, flowers, flower pots, fruit, furniture, kernel, leaves, live, logs, plywood, powder, roots, sawn wood, seeds, stems, timber, timber carvings, transformed wood, veneer, wax and wood products
Units of measure	Number (unit = blank or ‘number of specimens’), kg, l, m, m ² , m ³ . Where necessary, trade reported in other metrics was converted to one of these units, and trade that could not be equated to a standardised unit of measure (e.g. bags, bottles, boxes, flasks, etc.) was considered to be traded as ‘number of specimens’.
Year range	2017-2021 ⁴

¹ speciesplus.net

² A full list and description of source and purpose codes is specified in in [Res. Conf. 12.3 \(Rev. CoP19\)](#).

³ A full list of “terms” (i.e. descriptions of specimens in trade) traded is available in the CITES Trade Database interpretation guide, see: https://trade.cites.org/cites_trade_guidelines/en-CITES_Trade_Database_Guide.pdf

⁴ Trade data for 2021 may appear lower than other years due to missing annual reports; annual reports for 2021 had been received from 58% of Parties at the time of analysis.

	Data included
Additional information	<ul style="list-style-type: none"> The global conservation status and population trend of the species as published in The IUCN Red List of Threatened Species⁵, as well as the year of assessment. Whether the species/country combination was subject to the Review of Significant Trade process during any of the last four iterations (post CoP14, post CoP15, post CoP16 and post CoP17)⁶. Whether the taxon was reported in trade for the first time within the CITES Trade Database since 2017 (i.e. since the last Review of Significant Trade selection). Where possible, nomenclature changes have been accounted for; however, some taxa may be indicated as being in trade for the first time since the last selection process that were previously traded under a different taxonomic name. Whether a species was recently listed at CoP16, CoP17 and CoP18 (no trade data are available for CoP19 listings)⁷. A list of countries with direct exports in any of the most recent five years (2017-2021), whether they are a range State according to Species+ (with an asterisk * denoting non-range States), and the proportion of trade that their exports account for. Non-range States are defined as any States that are not listed as range States or where the population is considered Extinct according to Species+. The number of range States according to Species+⁸. Species that are subject to listing annotations relating to zero quotas⁹, or where a quota has been recommended by the Plants Committee, Standing Committee or Conference of the Parties for any year since 2017, or where a country has published a voluntary zero export quota for any year since 2017¹⁰. Species/country combinations subject to Standing Committee recommendations to suspend trade in any year since 2017¹¹. If a taxon/country combination was subject to one or more long-standing suspensions extending into 2017, the date when the suspension was put in place is reflected. It should be noted that a suspension may not necessarily have been in place for the whole year shown. Whether all trade in the taxon between 2017-2021 is reported as non-commercial, where non-commercial trade is defined as trade reported with any purpose code other than T. The proportion of the trade in each taxon reported under each source code.

⁵ www.iucnredlist.org Data downloaded on 17th January 2023.

⁶ No selection process took place following CoP18 due to disruption caused by the Covid-19 pandemic. The Plants Committee agreed to postpone the selection of new species/country combinations for review until the first regular meeting of the Committee after the 19th meeting of the Conference of the Parties (see PC25 SR).

⁷ Not shown for trade reported at the genus level or higher.

⁸ Not shown for trade reported at the genus level or higher.

⁹ The annotation text in full is available in the Excel output accompanying this document.

¹⁰ Not shown for trade reported at the genus level or higher. Data downloaded from Species+ on 31st March 2023.

¹¹ Current as of 23rd March 2023.

Summary Output

Key to Table 2

Unit: Trade in the unit 'blank' includes trade data reported with the unit code 'NAR' (number of specimens) or whether the unit column has been left blank.

Trade summaries: Quantities are in gross exports and rounded to the nearest decimal place, where applicable. '0' indicates no trade, '-' indicates that the species had not yet been listed in the Appendices.

IUCN status: DD = Data Deficient, NE = Not Evaluated, LC = Least Concern, NT = Near Threatened, VU = Vulnerable, EN = Endangered, CR = Critically Endangered.

IUCN population trends in brackets: (→) = stable population trend, (↓) = decreasing population trend, (↑) = increasing population trend, (?) = unknown population trend.

IUCN year of assessment: in brackets, where applicable e.g. (2011).

Exporters and Contextual information: For country and territory names see Appendix 1. An asterisk * denotes a non-range State as defined in Table 1. **No commercial trade = no trade between 2017-2021 reported with purpose code T; trade may have occurred under different purpose codes.** Percentages are correct to 1 decimal place, exporters accounting for <0.1% of total trade are not included. Please refer to the accompanying information document for full details of the text of any annotation relating to zero quotas, the text of any recommended quotas or voluntary published zero quotas, and the text of any suspensions.

Range States: the number of range States according to Species+.

% trade by Source: W = Wild, Y = specimens that fulfil the definition for 'assisted production' in Resolution Conf. 11.11 (Rev. CoP18), U = Unknown, - = Not reported. Percentages are correct to 1 decimal place, sources accounting for <0.01% of total trade are not included.

Table 2: Gross direct exports 2017-2021 of source W, U, or Y specimens, or specimens with no source reported. Data extracted from the CITES Trade Database 20th March 2023. [See Key on p. 6]

Overview

To comply with Stage 1 a) of Resolution Conf. 12.8 (Rev. CoP18) and the *Guidance regarding the selection of species/country combinations* outlined in Annex 2 of the Resolution, the UN Environment Programme World Conservation Monitoring Centre (UNEP-WCMC) has produced two outputs to assist the Plants Committee with their work in selecting species for inclusion in the Review of Significant Trade following CoP19:

- A **summary output**, which provides an overview of direct trade over the most recent five years (2017-2021) in wild-sourced and source unknown specimens of CITES-listed taxa, in addition to trade in specimens of plants that fulfil the definition for 'assisted production' in Resolution Conf. 11.11 (Rev. CoP18) and trade in specimens without a source specified (PC26 Doc. 16.5 Annex 1).
- An **extended analysis** (this document), which uses five criteria to identify taxa that show noteworthy patterns of trade.

Full details of the methodology for the extended analysis are provided from page 5; the results are provided in [Table 3](#) (page 10). Overall, 123 plant taxa met at least one of the five criteria for noteworthy patterns of trade; [Table 1](#) provides a breakdown of the number of taxa meeting each criterion by order.

Table 1: Overview of plant taxa meeting at least one of the five criteria for noteworthy trade.

Order	i) Endangered Species	ii) Sharp Increase (Global)	iii) Sharp Increase (Country)	iv) High Volume	v) High Volume (Globally Threatened)	Total no. unique taxa fulfilling any of the five criteria ¹
Apiales	0	0	0	1	0	1
Arecales	1	0	0	0	0	1
Caryophyllales	12	2	2	8	4	18
Cyatheales	0	1	1	2	0	3
Cycadales	2	0	0	1	0	3
Dipsacales	1	0	0	1	1	1
Ebenales	1	0	0	0	0	1
Euphorbiales	9	1	2	3	2	12
Fabales	15	3	5	7	7	20
Gentianales	2	0	0	2	2	4
Laurales	1	1	1	1	1	1
Liliiales	1	0	0	2	2	3
Malvales	1	0	0	0	0	1
Myrtales	4	1	2	2	2	6
Nepenthales	3	0	0	1	1	4
Orchidales	26	1	1	7	0	33
Primulales	0	1	1	1	0	2
Rhamnales	0	0	0	1	0	1
Rosales	0	0	0	1	1	1
Santanales	0	0	1	1	0	1
Sapindales	5	0	0	2	2	6

¹ Since a single taxon can meet more than one criterion, the total no. taxa may be lower than the sum of taxa for each group across the five criteria.

Methodology

Criteria to identify noteworthy patterns of trade

Taxa were considered to have noteworthy patterns of trade if they met any of the following five criteria: (i) Endangered Species, (ii) Sharp Increase (Global), (iii) Sharp Increase (Country), (iv) High Volume, or (v) High Volume (Globally Threatened). While criteria (i), (ii), (iv) and (v) apply to specific taxa, criterion (iii) applies to specific country/taxon combinations. The five criteria are defined below (a flow chart outlining how they are applied can also be found in [Figure 2](#)). All exports refer to gross exports².

- (i) **Endangered Species:** Taxa met this criterion if they were categorized as Critically Endangered (CR) or Endangered (EN) according to the *IUCN Red List of Threatened Species* and if any trade was reported in the most recent five years (2017-2021).
- (ii) **Sharp Increase (Global):** Taxa met this criterion if the volume of direct exports in 2021 at the global level across all accepted terms (see [Table 2](#)) was more than three times the average trade volume of the preceding five years (2016-2020) (see [Figure 1](#) below). A minimum trade threshold was applied; taxa were excluded if they were traded in very low volumes, defined as (a) totalling less than 100 units over the 10 year period 2012-2021 or (b) average trade of less than 1 unit/year (if the taxon is CR, EN) or 20 units/year (any other IUCN classification or not assessed) in the most recent three years (2019-2021)).

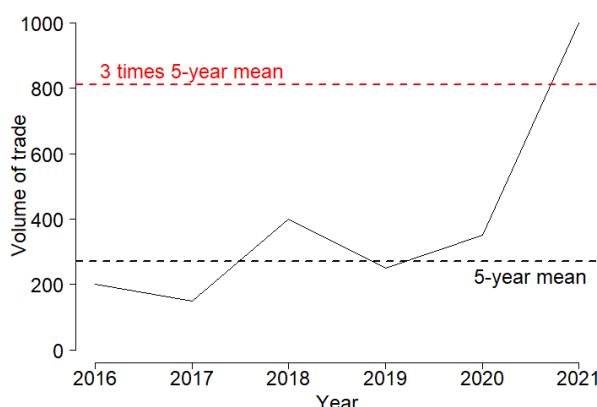

Figure 1 Application of the 'sharp increase' criterion (volume of trade = direct gross exports).

- (iii) **Sharp Increase (Country):** Taxon/country combinations met this criterion if the volume of direct exports across all accepted terms (see [Table 2](#)) in 2021 was more than three times the average trade volume of the preceding five years (2016-2020). A minimum trade threshold was applied; taxa were excluded if exports of that taxon/country combination occurred in very low volumes, defined as (a) totalling less than 100 units over the 10 year period 2012-2021 or (b) average trade of less than 1 unit/year (if the taxon is CR, EN) or 20 units/year (any other IUCN classification or not assessed) in the most recent three years (2019-2021)).
- (iv) **High Volume and (v) High Volume (Globally Threatened):** Taxa met criterion iv) or v) if the volume of exports across all accepted terms (see [Table 2](#)), based on average direct

² Quantities reported by the exporter and importer are compared and the largest quantity is taken. See https://trade.cites.org/cites_trade_guidelines/en-CITES_Trade_Database_Guide.pdf

exports 2019-2021, was in the top third of taxa within their order. Taxa were excluded if trade averaged less than 20 units/year for the three years 2019-2021, unless listed by the IUCN as Endangered or Critically Endangered, in which case they were only excluded if exports averaged less than 1 unit/year for the three year period. If the species in question was assessed by the IUCN as globally threatened³, Near Threatened or Data Deficient, average export volumes were adjusted by multiplying by 10 (see [Box 1](#)). If only 1-2 taxa within an order were represented, these were selected (provided that the threshold outlined above was met).

It should be noted that not all species have been assessed in the *IUCN Red List of Threatened Species*; trade volumes were not adjusted where species have not been assessed by the IUCN.

Box 1 Determination of taxa meeting the High Volume and High Volume (Globally Threatened) criteria.

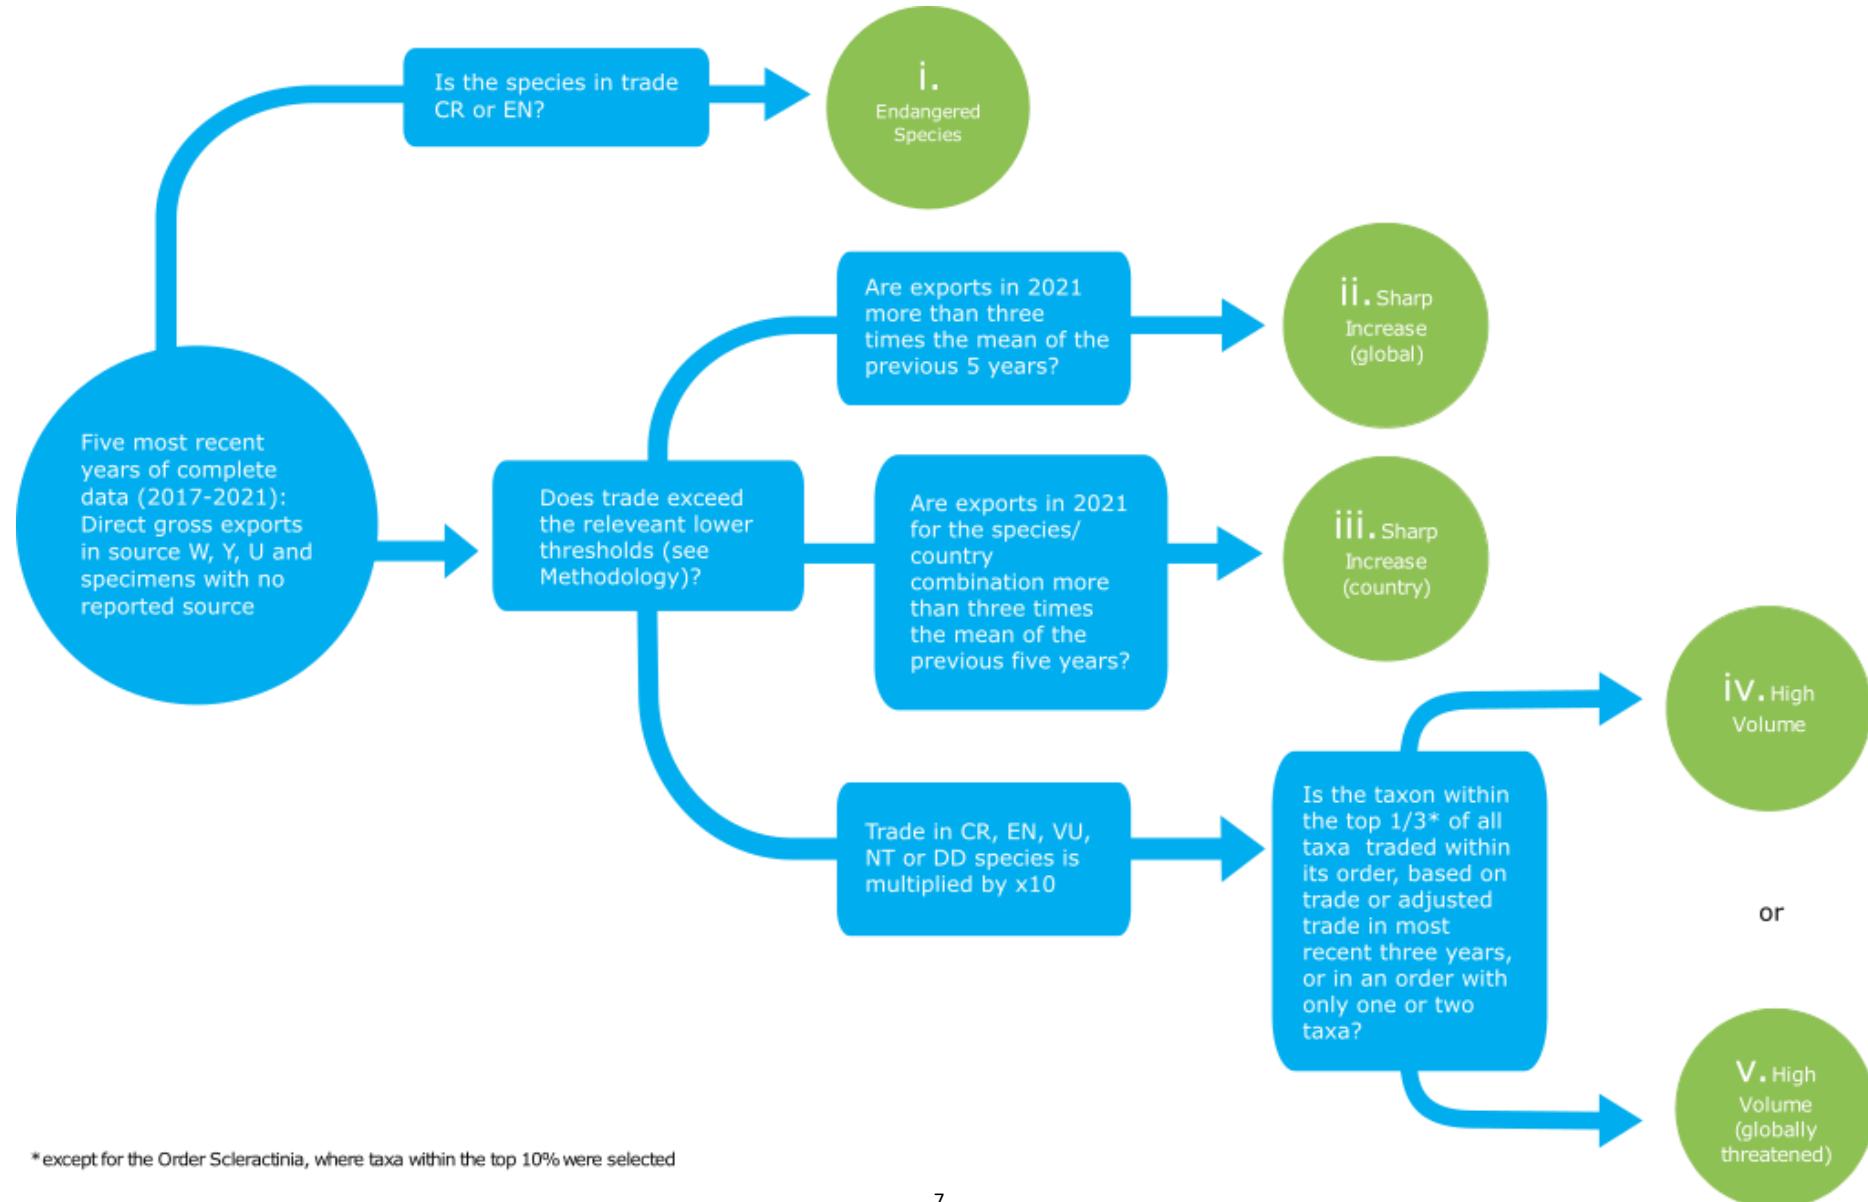

To illustrate the application of the High Volume and High Volume (Globally Threatened) criteria, we consider a sample order with nine species in trade (see table below). The three species whose trade volumes fell within the top third of the order would be selected. In the absence of any globally threatened species, species 1, 2 and 3 would meet the criteria for "High Volume". However, as species 6 and 9 are globally threatened, the average export volumes for those species are adjusted by multiplying by 10. Based on the adjusted export volumes, the species with the highest export volumes were species 6, 1 and 2.

Species 1 and 2 would then be selected as "High Volume", and species 6 would be selected as "High Volume (Globally Threatened)" because of its threat status. The species that would be selected are highlighted in grey in the table below.

Example Order	Average exports 2019-2021	Adjusted average exports 2019-2021	Globally threatened (CR, EN, VU, NT or DD)	Criterion met
Species 1	1000	1000	No	High Volume
Species 2	850	850	No	High Volume
Species 3	820	820	No	
Species 4	750	750	No	
Species 5	600	600	No	
Species 6 (VU)	200	2000	Yes	High Volume (Globally Threatened)
Species 7	55	55	No	
Species 8	3	3	No	
Species 9 (EN)	1	10	Yes	

³ Defined as species classified in the IUCN Red List of Threatened Species as Critically Endangered, Endangered, and Vulnerable.

Figure 2 Flow chart for the methodology used to select taxa showing noteworthy patterns of trade for consideration in the RST.

Data used in the extended analysis

Data used for the extended analysis ([Table 2](#)) were extracted from the CITES Trade Database (trade.cites.org) on 20th March 2023, and include all CITES Annual Reports received by UNEP-WCMC by 23rd February 2023.

Table 2: Data included in the extended analysis

	Data included
Distribution status	Trade data for all distribution statuses except for species-exporter combinations where the species has been introduced, according to Species ⁴
CITES Trade Database report type	Gross exports; direct trade only (re-exports are excluded)
Appendix	Appendix II taxa and Appendix I taxa subject to reservation
Source codes⁵	Wild ('W'), specimens of plants that fulfil the definition for 'assisted production' in Resolution Conf. 11.11 (Rev. CoP18) ('Y'), unknown ('U') and no reported source ('-')
Purpose codes⁵	All
Terms⁶	bark, carvings, chips, cultures, derivatives, dried plants, extract, flowers, flower pots, fruit, furniture, kernel, leaves, live, logs, plywood, powder, roots, sawn wood, seeds, stems, timber, timber carvings, transformed wood, veneer, wax and wood products
Units of measure	Number (unit = blank or 'number of specimens'), kg, l, m, m ² , m ³ . Where necessary, trade reported in other metrics was converted to one of these units, and trade that could not be equated to a standardised unit of measure (e.g. bags, bottles, boxes, flasks, etc.) was considered to be traded as 'number of specimens'.
Year range	Data for 2017-2021 is shown in the results tables ⁷ . Data from 2012-2021 is used in the analysis/selection process (see <i>Criteria to identify noteworthy patterns of trade</i>)
Additional information	<ul style="list-style-type: none"> The global conservation status and population trend of the species as published in the IUCN Red List of Threatened Species⁸ as well as the year of assessment. Whether the species/country combination was subject to the Review of Significant Trade process during any of the last four iterations (post CoP14, post CoP15, post CoP16 and post CoP17)⁹. Whether the taxon was reported in trade for the first time within the CITES Trade Database since the last Review of Significant Trade selection process (i.e. since 2017). Where possible, nomenclature changes have been accounted for; however, some taxa may be indicated as being in trade for the first time since the last selection process that were previously traded under a different taxonomic name.

⁴ speciesplus.net

⁵ A full list and description of source and purpose codes is specified in [Res. Conf. 12.3 \(Rev. CoP19\)](#).

⁶ A full list of 'terms' (i.e. descriptions of specimens in trade) traded is available in the CITES Trade Database interpretation guide, see: https://trade.cites.org/cites_trade_guidelines/en-CITES_Trade_Database_Guide.pdf

⁷ Trade data for 2021 may appear lower than other years due to missing annual reports; annual reports for 2021 had been received from 58% of Parties at the time of analysis.

⁸ www.iucnredlist.org Data downloaded on 17th January 2023.

⁹ No selection process took place following CoP18 due to disruption caused by the Covid-19 pandemic. The Plants Committee agreed to postpone the selection of new species/country combinations for review until the first regular meeting of the Committee after the 19th meeting of the Conference of the Parties (see PC25 SR).

	Data included
	<ul style="list-style-type: none"> • Whether a species was recently listed at CoP16, CoP17 or CoP18 (no trade data are available for CoP19 listings)¹⁰. • A list of countries with direct exports in any of the most recent five years (2017-2021), whether they are a range State according to Species+ (with an asterisk * denoting non-range States), and the proportion of trade that their exports account for. Non-range States are defined as any States that are not listed as range States or where the population is considered Extinct according to Species+. • The number of range States according to Species+¹¹. • Species that are subject to listing annotations relating to zero quotas¹², or where a quota has been recommended by the Plants Committee, Standing Committee or Conference of the Parties for any year since 2017, or where a country has published a voluntary zero export quota for any year since 2017¹³. • Species/country combinations subject to Standing Committee recommendations to suspend trade in any year since 2017¹⁴. If a taxon/country combination was subject to one or more long-standing suspensions extending into 2017, the date when the suspension was put in place is reflected. It should be noted that a suspension may not necessarily have been in place for the whole year shown. • Whether all trade in the taxon between 2017-2021 was reported as non-commercial, where non-commercial trade is defined as trade reported with any purpose code other than T. • The proportion of the trade in each taxon reported in each source code.

¹⁰ Not shown for trade reported at the genus level or higher.

¹¹ Not shown for trade reported at the genus level or higher.

¹² The annotation text in full is available in the Excel document accompanying the summary output.

¹³ Not shown for trade reported at the genus level or higher. Data downloaded from Species+ on 31st March 2023.

¹⁴ Current as of 23rd March 2023.

Results

Key to Table 3

Taxon: Taxa should be assumed to be Appendix II unless otherwise indicated. For Appendix I species that are subject to a reservation, this is indicated as "(Res. I)" with the countries concerned listed.

Unit: Trade in the unit 'blank' includes trade data reported with the unit code 'NAR' (number of specimens) or where the unit column has been left blank.

Trade summaries: Quantities are in gross exports and rounded to the nearest decimal place, where applicable. '0' indicates no trade, '-' indicates that the species had not yet been listed in the Appendices.

Selection criteria met: The number of criteria met is given in brackets, e.g. "(2)"; if taxa meet 2 or more criteria this is indicated in bold.

IUCN status: DD = Data Deficient, NE = Not Evaluated, LC = Least Concern, NT = Near Threatened, VU = Vulnerable, EN = Endangered, CR = Critically Endangered.

IUCN population trends in brackets: (→) = stable population trend, (↓) = decreasing population trend, (↑) = increasing population trend, (?) = unknown population trend.

IUCN year of assessment: in brackets, where applicable e.g. (2011).

Exporters and Contextual information: For country and territory names see Appendix 1. An asterisk * denotes a non-range State as defined in Table 2. **No commercial trade = no trade between 2017-2021 reported with purpose code T; trade may have occurred under different purpose codes.** Percentages are correct to 1 decimal place, exporters accounting for <0.1% of total trade are not reported. Please refer to the information document accompanying the summary output for flora for full details of the text of any annotation relating to zero quotas, the text of any recommended quotas or voluntary published zero quotas, and the text of any suspensions.

Range States: the number of range States according to Species+.

% trade by Source: W = Wild, Y = specimens that fulfil the definition for 'assisted production' in Resolution Conf. 11.11 (Rev. CoP18), U = Unknown, - = Not reported. Percentages are correct to 1 decimal place, sources accounting for <0.01% of total trade are not included.

Table 3: Flora taxa that meet any of the five criteria for noteworthy trade. Data extracted from the CITES Trade Database 20th March 2023. See Key on p. 10.
RS = range States.
