

MANSFIELD'S
PROPAGATION NURSERY

Advanced Orders
2021 - 2022

Brachyscome Magenta Bliss (PBR)

Australia's Leading Wholesale Propagation Nursery

Quality All The Way

Dear Valued Customer,

The following is a copy of our Advanced Order Book for 2021-2022.
Our Advanced Order Book has been split into two sections.

The 1st section of the list is varieties we plan to produce over the next year.
To guarantee your supply, please fill out the quantities you require in the month or months you require them.
Please note it may be difficult to fulfil orders in the greyed out months.

We have identified new varieties to the list from last year. These varieties are in **Bold** text.

Order Quantities:

- Multiples of 144 for plug grownnet tray
- Multiples of 84 for 50mm grownnet tray
- Multiples of 56 for 50mm square container
- Multiples of 20 for 75mm container

If you're looking to grow crops of over 3,000 of any varieties listed, you will automatically take advantage of our Crop Pricing efficiencies of 10% off (providing we can meet your requirements)
Further reductions will be applied for crops over 5,000. Simply speak to our Sales Team.

The 2nd section is for you to write in any varieties that we have not listed that you are interested in purchasing a minimum of 1,000 plants.
We will discuss these varieties with you.

Simply fill out your Advanced Order Book and post it back to us. We will confirm that we have received your order and if we encounter any production issues along the way you will be contacted and updated.

Please contact us if you prefer to use an electronic copy of our Advanced Order Book to fill out.
If you would like any further information, please call us on (03) 9782 2404 or email us orders@mansfields.net.au

With thanks from,

Will, Ruth, Julie, Matt and Molly
Mansfield's Propagation Sales Team

What is a Grownet?

Our Grownet is a plug liner, made up of a biodegradable web, with an open net structure. The net structure not only ensures binding of the root ball but it also provides a structure so that the plant's roots can continue to grow uninhibited. Grownet is completely biodegradable. Once it is in contact with substrate, natural micro-organisms and bacteria gradually break the Grownet down. The speed of this decomposition is influenced by the temperature, humidity and the pH value of the substrate. During the disintegration process, the Grownet is converted into CO₂ and H₂O. Even before the Grownet begins to degrade, the roots have the ability to penetrate the net and begin bursting it open.

Why is Mansfield's changing?

- Mansfield's Propagation Nursery has been reaching it's limits as to how many plants it could produce in a season. In order to move to the next stage of production we needed to install more automation and a transplantable plug.
- Whilst tubes will remain for certain lines, we have listened to feedback from our customers requesting us to move to a transplantable product.
- Our customers would like more plants and as early in the season as possible. The Grownet will allow us to fulfil customer timing requirements and more plants into the industry with a quicker turnaround time.
- The Grownet is a biodegradable and compostable product which means fewer plastic tubes going in to landfill.

How will the change benefit you?

You, as a business will now be able to remove the de-tubing process and tube waste. For those who currently have or

are researching transplanters, this will be a method that will suit the Grownet. According to our trials, plants will rapidly develop a stronger root system and the root disturbance is far less with a Grownet encased plant. Fresher stock can be confidently planted if required.

What our customers have to say...

"From the moment the plants in the Grownets arrived, we knew this was the future in plant production. Potting with them was fast, clean and effortless and with no plastic tubes to recycle in this era of global warming, reducing our carbon footprint can only be a positive. The plants grew fantastic in 140mm, root structure was excellent and well within our expected time frames that we expect from traditional plastic tube grown stock. I thank the team at Mansfield's for allowing us to trial this game changing product and hope the industry as a whole embraces it." - Shane Male from Meyer Nurseries

Biodegradable and transplantable, Grownet is part of Mansfield's plan towards a more efficient, better performing and greener future.
