

Wednesday Walk on the Bullen Range from Tidbinbilla Tracking Station – 22 September 2010

After a difficult start scaling the gate opposite the tracking station car park, we explored the lower slopes heading north and venturing into a few gullies. We mainly wanted to find *Acacia verniciflua* in flower and were eventually rewarded. There were many good displays of other flowers - *Hardenbergia violacea*, *Acacia buxifolia*, *Cryptandra amara* var. *longiflora*, *Petalochilus fuscatus*, *Daviesia genistifolia*, *Stypandra glauca*, to name a few. Other plants of interest were *Pomaderris betulina* ssp. *betulina*, *P. angustifolia*, *Hibbertia riparia*, *Personaria rigida* (quite a few) and some wonderful trees, particularly *Eucalyptus rossii*, *E. polyanthemos* and *E. nortonii*.
