Extinction is a natural process. Today, however, plant and animal species are disappearing world-wide at an accelerated pace. Based on current trends, half of the species on earth will be extinct within the next 100 years. The major cause of this phenomenon is human caused changes to the environment, which continue to increase - in Oregon and throughout the world.

Once lost, a species can never be recovered, and there is no way of knowing how useful it may have been. We do know that human beings and many of their industries depend on plant and animal products. About 50% of all pharmaceuticals have a natural component as an active ingredient, yet less than one percent of the world's species have been chemically analyzed and tested. Many invertebrates and plants contain undescribed and highly functional compounds.

Limnanthes floccosa subsp. *grandiflora*, or woolly meadow-foam, a rare plant that grows in southwest Oregon, has been recently found to produce a hybrid with the more common member of the genus, *Limnanthes alba*. This hybrid grows well in the poorly drained soils of the Willamette Valley and produces a valuable oil used for soaps, plastic and rubber production. In addition, the new hybrid meadow-foam does not require the field burning necessary for other crops. This species, and many other Oregon natives, will be lost without intervention. The purpose of this publication is to provide land managers, owners and interested parties with a list of those species in Oregon which are in greatest jeopardy.

Oregon State Endangered Species Programs

In 1987, the Oregon Legislature passed an Endangered Species Act which gave the Oregon Department of Agriculture (ODA) responsibility and jurisdiction over threatened and endangered plants, and reaffirmed the Oregon Department of Fish and Wildlife's (ODFW) responsibility for threatened and endangered fish and wildlife. Both of these agencies have entered into cooperative (Section 6) agreements with the United States Fish and Wildlife Service (USFWS) for the purpose of carrying out research and conservation programs for animal and plant species under the auspices of the federal Endangered Species Act. The Oregon Natural Heritage Advisory Council has a similar agreement with USFWS for invertebrates. More information on the state

endangered species programs can be found at the beginning of the animal and plant sections of this booklet.

Oregon Natural Heritage Information Center

The Oregon Natural Heritage Information Center (ORNHIC) is part of the Information Program of the Institute for Natural Resources of Oregon State University (OSU). ORNHIC maintains extensive databases of Oregon biodiversity, concentrating on rare and endangered plants, animals and ecosystems. The program is managed by OSU, but has been a cooperative project, with significant support from The Department of State Lands, The Nature Conservancy in Oregon, USFWS, the Bureau of Land Management (BLM), the U.S. Forest Service (USFS), and the Oregon Watershed Enhancement Board. Biologists working for these agencies, together with the state's herbaria and museums, provide most of the information that comprise ORNHIC's databases.

This booklet has been compiled using the most current information available on the distribution and abundance of plants and animals native to Oregon. Although based on a large volume of information, it is by no means complete. Much is known about some species, very little about others. ORNHIC welcomes additional information or recommendations regarding any of the taxa listed herein. Such information, as well as data requests, should be directed to:

Outline

This booklet is divided into animal and plant sections. The sections begin with a description of the animal and plant programs in the state and are followed by the main list of animals and plants. For animals, the list is first divided into major groups (fish, amphibians, reptiles, mammals, birds, and invertebrates) and then arranged alphabetically by scientific name. The plant list is first divided into four groups (vascular plants, non-vascular plants, lichens and fungi) and then alphabetized by scientific name. The information for each taxa includes the scientific and common names with authorities for plants, along with synonymy if the name is new; county, ecoregion,

and adjacent state distribution information; the state and federal status; and the NatureServe/Heritage Network Global and State ranks, as well as the ORNHIC list and. Distribution abbreviations are listed and explained below.

Criteria and Definitions

Inclusion of any given taxon on these lists is based on several specific criteria. The most important factors are the total number of known, extant populations in Oregon and world-wide, and the degree to which they are potentially or actively threatened with destruction. Other criteria include the number of known populations considered to be securely protected, the size of the various populations, and the ability of the taxon to persist at known sites. The taxonomic distinctness of each species also has been considered. Hybrids or questionable, undescribed

species have not been included, although undescribed taxa recognized by the scientific community in Oregon are included.

Taxonomic experts who were consulted are listed in the Acknowledgments section. All of these criteria are considered in the development of NatureServe/Heritage Network species ranks as well.

Definitions and explanations of the various ranks and federal and state status are included on page 4, and summarized on the back inside cover along with a list of abbreviations. A number of definitions and criteria specific to animals (wintering or breeding ranks in birds) are discussed in detail at the beginning of the animal section of this booklet.

DISTRIBUTION INFORMATION

Distribution Information

The distribution information included on the lists represents the both the current and historic, documented distribution of the taxa included.

The information is in the following format: Ecoregion; State (and/or Canadian Province); and County. Out-of-state distribution information is complete for plant and animal taxa on ORNHIC List 1 (which are usually Oregon or regional endemics). For all other taxa, all adjacent states or the closest state with occurrences will be listed; a plus (+) signifies that the taxa is found in additional states. Taxa with no other states noted are Oregon endemics. For the most part, the Ecoregion, County and State distribution is based on both historic and current information. Any additional input on distribution will be incorporated in future updates of this publication.

Ecoregions

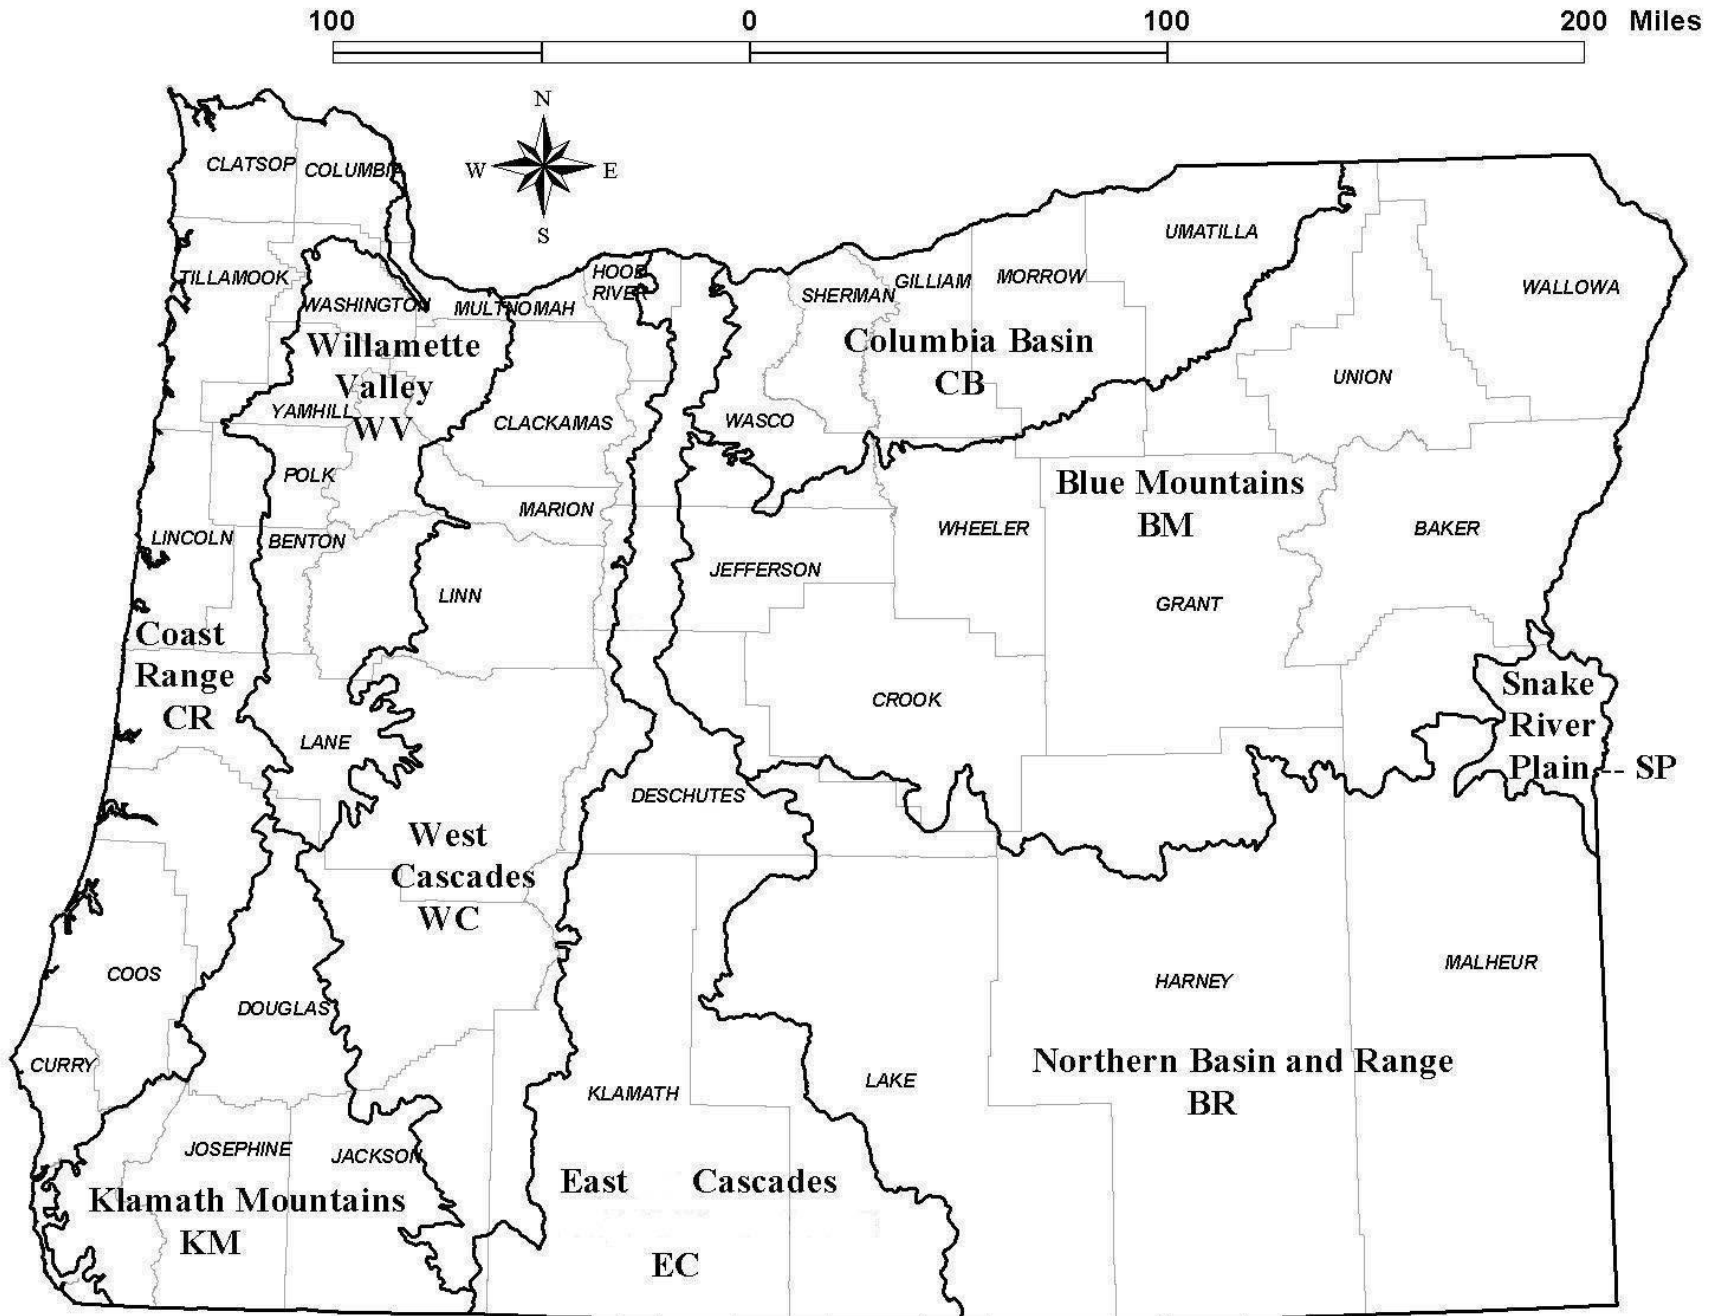

The map on the following page divides the state into nine distinct regions based on geologic and vegetative patterns. The map and the regions are from Thorson *et al.* 2003. The Ecoregions are: CR = Coast Range, WV = Willamette Valley, KM = Klamath Mountains, WC = West Cascade Range and Crest, EC = East Cascade Range, BM = Blue Mountains, BR = Northern Basin and Range, CB = Columbia Basin, and SP = Snake River Plain.

Counties

County distribution is keyed to the base map on the following page. The abbreviations used in the booklet are made from the first four letters of each county name. The county names are: Baker, Benton, Clackamas, Clatsop, Columbia, Coos, Crook, Curry, Deschutes, Douglas, Gilliam, Grant, Harney, Hood River, Jackson, Jefferson, Josephine, Klamath, Lake, Lane, Lincoln, Linn, Malheur, Marion, Morrow, Multnomah, Polk, Sherman, Tillamook, Umatilla, Union, Wallowa, Wasco, Washington, Wheeler, and Yamhill. The county information included is based on data from ORNHIC files. Please notify us of mistakes or omissions.

States and Canadian Provinces and Territories

State, provincial, and territorial distribution is included on the lists primarily to alert biologists to the distribution of these rare, threatened, and endangered taxa in adjacent states. The distribution for the more wide ranging species in states not adjacent to Oregon is based on published information and may not be complete. Two-letter postal abbreviations are used to identify these regions. States adjacent to Oregon are: CA = California, ID = Idaho, NV = Nevada, and WA = Washington. Other states' and provinces' abbreviations can be found in the "Codes and Abbreviations" section.

DEFINITIONS

Endangered taxa are those which are in danger of becoming extinct within the foreseeable future throughout all or a significant portion of their range.

Threatened taxa are those likely to become endangered within the foreseeable future.

LE = Listed Endangered. Taxa listed by the USFWS or the National Marine Fisheries Service (NOAA Fisheries) as Endangered under the Endangered Species Act (ESA), or by the ODA or ODFW under the Oregon Endangered Species Act of 1987 (OESA).

LT = Listed Threatened. Taxa listed by the USFWS, NOAA Fisheries, ODA, or ODFW as Threatened.

PE = Proposed Endangered. Taxa proposed by the USFWS or NOAA Fisheries to be listed as Endangered under the ESA or by ODFW or ODA under the OESA.

PT = Proposed Threatened. Taxa proposed by the USFWS or NOAA Fisheries to be listed as Threatened under the ESA or by ODFW or ODA under the OESA.

C = Candidate. Taxa for which NOAA Fisheries or USFWS have sufficient information to support a proposal to list under the ESA, or which is a candidate for listing by the ODA under the OESA.

SOC = Species of Concern. Taxa which the USFWS is reviewing for consideration as Candidates for listing under the ESA.

PS = Partial Status. Taxa for which some but not all infraspecific taxa have status.

Lists Following Animal and Plant Sections

In addition to the main lists summarizing information on animals and plants, this booklet includes the agency lists compiled from the most recent information available:

- Federal and State, listed and proposed animals (USFWS, NOAA Fisheries, ODFW)
- Federal candidate (USFWS, NOAA Fisheries) and species of concern (USFWS) animals
- State sensitive animals (ODFW)
- Federal listed, proposed and candidate plants, and species of concern (USFWS)
- State listed and candidate plants (ODA)
- Heritage Program Lists (ORNHIC)

The criteria for the ORNHIC are as follows:

List 1 contains taxa that are threatened with extinction or presumed to be extinct throughout their entire range.

List 2 contains taxa that are threatened with extirpation or presumed to be extirpated from the state of Oregon. These are often peripheral or disjunct species which are of concern when considering species diversity within Oregon's borders. They can be very significant when protecting the genetic diversity of a taxon. ORNHIC regards extreme rarity as a significant threat and has included species which are very rare in Oregon on this list.

List 3 contains taxa for which more information is needed before status can be determined, but which may be threatened or endangered in Oregon or throughout their range.

List 4 contains taxa which are of conservation concern but are not currently threatened or endangered. This includes taxa which are very rare but are currently secure, as well as taxa which are declining in numbers or habitat but are still too common to be proposed as threatened or endangered. While these taxa may not currently need the same active management attention as threatened or endangered taxa, they do require continued monitoring.

Drops and Name Changes contains taxa deleted or had their names changed from the previous edition (May 2004).

NatureServe/Natural Heritage Network Ranks

ORNHIC participates in an international system for ranking rare, threatened and endangered species throughout the world. The system was developed by The Nature Conservancy and is now maintained by NatureServe in cooperation with Heritage Programs and Conservation Data Centers in all fifty states (plus the Navaho Nation, Tennessee Valley Authority, Puerto Rico and the Virgin Islands), all of Canada except for two territories, and eight Latin American countries.

Rank Definitions

The ranking is a 1-5 scale, based primarily on the number of known occurrences, but also including threats, sensitivity, area occupied, and other biological factors. In this booklet, the ranks occupy two lines. The top line is the Global Rank and begins with a "G". If the taxon has a trinomial (a subspecies, variety or recognized race), this is followed by a "T" rank indicator. The second line is the State Rank and begins with the letter "S". The ranks are summarized below (see page 6 for migratory bird ranks):

- 1 = Critically imperiled because of extreme rarity or because it is somehow especially vulnerable to extinction or extirpation, typically with 5 or fewer occurrences.
- 2 = Imperiled because of rarity or because other factors demonstrably make it very vulnerable to extinction (extirpation), typically with 6-20 occurrences.
- 3 = Rare, uncommon or threatened, but not immediately imperiled, typically with 21-100 occurrences.
- 4 = Not rare and apparently secure, but with cause for long-term concern, usually with more than 100 occurrences.
- 5 = Demonstrably widespread, abundant, and secure.

H = Historical Occurrence, formerly part of the native biota with the implied expectation that it may be rediscovered.

X = Presumed extirpated or extinct.

U = Unknown rank.

NR = Not yet ranked.

Rank Qualifiers

Q = Questionable taxonomy. Global ranks sometimes have a "Q" at the end. This indicates that there are questions related to the taxonomic validity of the taxon.

? = Inexact Numeric Rank. Taxa that can be ranked, but for which the rank is not certain. Ranks with a "?" indicate that the rank is probably correct, but that either documentation is lacking or there is still some uncertainty. Such ranks are always provisional.

Range Ranks = Ranks with more than one value. These can be G1G2, G1G3, etc. These indicate that the predicted final rank would be within the range, but with no indication of preference among the possibilities.

More details on the Heritage Ranking system and more definitions can be found at the NatureServe web site:

SPECIAL ANIMALS

Information on Oregon's rare, threatened and endangered animal species is presented here in two formats. The first is a list summarizing the distribution, federal and state status, and Heritage Program rank of the species as described on pages 4 and 5. The second format breaks the species into lists based on their status.

In both formats, the special animals are divided into major groups (fish, amphibians, reptiles, birds, mammals, invertebrates), then listed alphabetically by scientific name. The invertebrate summary list is unique in being further subdivided into class and order.

The animals included in this booklet are those rare, threatened and endangered vertebrate and invertebrate species that are native to Oregon and have (or have had) sustained breeding populations within the state. Open-ocean mammals or sea turtles which generally

occur offshore and do not breed in Oregon are not included in this book. Wintering bird species and those which occur on an accidental or occasional basis present special problems which are described below.

Animal Species Tracked

ORNHIC strives to serve as a clearinghouse of information regarding site-specific locations of rare, threatened and endangered species in Oregon. The goal is to obtain and computerize information for all locations of all state and federal listed animal species. Location data is also computerized for other animal species that are rare (of limited abundance or restricted distribution), threatened, endangered or otherwise vulnerable in Oregon, based on the NatureServe/Natural Heritage Network ranks. Locations for a species are tracked only if it is possible to track all sites in the state.

Ranking decisions are made based on the best available information. Comments on ranks or on the inclusion or exclusion of taxa are welcome. Funds are not currently available to track all species of concern and all ODFW Sensitive Species, although ORNHIC tracks as many of these as possible.

ORNHIC maintains computerized information for all animal species on ORNHIC Lists 1 and 2. There are several accidental or occasional breeding birds that are not tracked, even though they rank out highly. Since most of these species are well outside their normal range, effort is better spent on species which are part of Oregon's usual fauna. Additionally, ORNHIC maintains manual files for all animal species in this booklet.

ORNHIC encourages everyone to send in any information, reports or observations for the special animal species listed. By 2008, electronic forms for providing data will be available online. A sample animal field survey form is included on page 103. Information need not be limited to this format to be considered for submission.

Animal Lists and Wildlife State Ranks

Fish

All vertebrate taxa in this booklet have published or soon to be published valid names, except for some fish taxa. These fish are represented on the lists by their Evolutionarily Significant Unit (ESU) designation. The ESU designations are defined by NOAA Fisheries under their ESA responsibility. ORNHIC tracks and ranks all listed, proposed and candidate ESUs for anadromous fish. For listed or proposed anadromous fish, spawning and rearing areas are mapped as well as, but separately from, migratory corridors. As a result, there are a few listed salmon tracked which may never have spawned in Oregon, but which travel through the waters of the state.

Birds

Avian species are usually placed on the ORNHIC Lists based on breeding populations. Some species may be common in winter or migration but rare as breeders in Oregon. In these instances it is only the breeding populations that are of concern (e.g. horned grebe, bufflehead). Species that occur in Oregon in migration or as winter residents only are generally not considered here, except for especially sensitive species with critical staging or wintering locations in Oregon (e.g. Aleutian Canada goose, California brown pelican). There are several bird species that

have nested in Oregon on occasion (semipalmated plover, black-chinned sparrow) but are not yet considered established breeders. For now these species are not included on the list, pending more accurate determination of their breeding status. Species of accidental occurrence are not included either.

The NatureServe/ORNHIC state ranks for migratory birds require further explanation. State ranks for long-distance migrants are separated by the breeding and nonbreeding components of the population. State ranks followed by a 'B' refer to breeding populations, while ranks followed by an 'N' refer to a nonbreeding (wintering) population. Thus a state rank of S1B, S2N indicates that the breeding portion of the population is extremely rare and the wintering portion is slightly more common. If a species occurs in the state only during the breeding season it will only have an S#B rank. Similarly, if a species only occurs in Oregon during the nonbreeding season it will have an S#N rank. Species which are not long-distance migrants are ranked without the B or N modifier.

Invertebrates

Compilation of the invertebrate lists has been especially challenging. Little is known about the status and distribution of most invertebrate taxa found in Oregon, especially those which appear to be rare, threatened or otherwise vulnerable. Most invertebrate groups are under-collected and under-observed. As a result state ranks may not accurately reflect the true population status for some species. Currently ORNHIC assigns these species a state ranking number but the "?" modifier is occasionally used to indicate species that may be rarely collected as opposed to truly rare.

The Oregon Natural Heritage Advisory Council of the Department of State Lands has been granted limited authority to assist in conserving invertebrates through a cooperative agreement with the USFWS via Section 6 of the Endangered Species Act. ORNHIC provides staff to help manage this program. It is hoped that with the cooperation of conservation organizations, state agencies and federal agencies, additional information can be gathered to help understand and conserve rare, threatened and endangered invertebrates in Oregon.

It is the State of Oregon's policy "to prevent the serious depletion of any indigenous species" (ORS 496.012), and in 1987 the Oregon Legislature enacted the Oregon Endangered Species Act (ESA). The Oregon administrative rules for threatened and endangered species (OAR 635-100-0100 to 0130) are intended to help implement these policies. In accordance with these rules, species can be classified as "threatened" (any native species likely to become endangered within the foreseeable future throughout any significant part of its range within the state) or "endangered" (any native species determined to be in danger of extinction). The rules also identify general steps that may be taken to recover these species.

The Oregon Department of Fish and Wildlife (ODFW) maintains a list of threatened and endangered species. There are currently 36 animals on the list. The list includes 12 marine animals and 2 accidental bird species not covered in this booklet (e.g., albatross, whales, sea turtles). The state ESA requires state agencies to develop programs for the management and protection of endangered species on state lands. For threatened species, state agencies are required to comply with survival guidelines adopted by the Oregon Fish and Wildlife Commission.

Additionally, a "sensitive" species classification was created under Oregon's Sensitive Species Rule (OAR 635-100-040) to address the need for a proactive species conservation approach. The Sensitive Species List is a non-regulatory tool that helps focus wildlife management and research activities, with the goal of preventing species from declining to the point of qualifying as "threatened" or "endangered." Sensitive species are naturally reproducing native animals which are considered at-risk in all or any significant portion of their range in Oregon. Sensitive species face one or more threats to their populations and/or habitats. Implementation of appropriate conservation measures to address the threats may prevent them from qualifying for listing. The list is divided into 4 categories as defined below:

CRITICAL (SC) - "Critical" sensitive species are those for which listing as threatened or endangered would be appropriate if immediate conservation actions were not taken. Some peripheral species which are at risk throughout their range and some disjunct populations (those that are geographically isolated from other populations) are also considered "Critical."

VULNERABLE (SV) - "Vulnerable" sensitive species are not in imminent danger of being listing as threatened or endangered, but could become "sensitive-critical," "threatened," or "endangered," with changes in populations, habitat or threats.

PERIPHERAL OR NATURALLY RARE (SP) - "Peripheral" species are on the edge of their range. "Naturally Rare" species are those with historically low population numbers in Oregon due to naturally limiting factors. The management objective is to maintain existing populations within their current range.

UNDETERMINED STATUS (SU) -

"Undetermined" species are those for which status is unclear. They may be susceptible to population declines that may result in a listing as endangered, threatened, critical or vulnerable in the future, but additional research is needed before a decision can be made regarding their status.

ODFW has initiated a review and update of the Sensitive Species List. The updated list was not complete at the time of publication of this booklet. Since the 1997 list will remain in effect until the update is completed, the 1997 list is included here. The 2007 revised list will be published on the ODFW and ORNHIC websites when completed.

ODFW coordinates with other state and federal agencies, tribes, and conservation groups on efforts to survey, manage and protect threatened, endangered and sensitive species. Copies of the Oregon Endangered Species Act and administrative rules, the Sensitive Species rule, and updated lists of the threatened and endangered or sensitive species are available through the ODFW website:

This plant list is an update of the 2004 edition of this publication. All status changes for specific taxa reflect new information obtained since then.

Species that have been dropped from the list or have had name changes are not included within the main body of the lists. These are listed separately in the "Drops and Name Changes" section. If you do not see a species name that had been in the 2004 edition of the booklet, please refer to that section.

The lists are arranged alphabetically by scientific name. Descriptions of the categories and lists can be found in the Introduction on page 1. State distribution is included for all vascular plant taxa in this edition. Distribution information for the non-vascular plants and fungi is not complete.

At the end of the main list, taxa are listed again by status. These include: a) the USFWS Federal Listed, Candidate and Species of Concern, b) the ODA State Listed and Candidate taxa, c) List 1, d) List 2, e) List 3, and f) List 4.

List 1 contains taxa which are endangered or threatened throughout their range or which are presumed extinct. The status of taxa on this list represents its status throughout its range. Species which have been extirpated from Oregon are included with an -ex after the List number (e.g. 1-ex). Taxa known or thought to be extinct throughout their range have an -X following the list number (e.g. 1-X).

List 2 contains taxa which are threatened, endangered or possibly extirpated from Oregon, but are stable or more common elsewhere. Taxa extirpated from Oregon are included with an -ex after the List number (e.g. 2-ex).

List 3 contains taxa for which more information is needed before status can be determined, but which may be threatened or endangered in Oregon or throughout their range.

List 4 contains taxa of concern which are not currently threatened or endangered. This list includes taxa which are very rare but are currently secure, as well as taxa which are declining in numbers or habitat but are still too common to be proposed as threatened or endangered.

ORNHIC recognizes that fungi are not plants and should be recognized as a distinct kingdom. However, for this booklet they are included with the plants. As in previous editions, information on the fungi in the lists is not as complete as other groups of species. As a result, most remain on the Review List (List 3).

New information on these species has been summarized from recent work, which included extensive herbaria searches and fieldwork from federal agency biologists as well as from OSU faculty and staff. Most of this work was a result of the efforts by the USFS and BLM in implementing the Survey and Manage program of the Northwest Forest Plan. The heritage ranks are the best determination of a species' status, but due to their limited inventory, heritage ranks for fungi are generally less certain than for other vascular and non-vascular species. We hope their inclusion here will stimulate more research and survey, since many of these taxa may be among Oregon's rarest.

ORNHIC is interested in obtaining and computerizing data for all locations of taxa on Lists 1 and 2. Manual files are maintained for locations of those on List 3 and 4. It is critical that additional information be obtained for List 3 taxa so accurate status determinations can be made. The submission of additional information on status or occurrences of any species included on these lists would be appreciated. Distribution information is based on historical and current reports and is included to aid in searches and to increase knowledge of these taxa.

The Oregon Checklist and Flora Project, and the publication of new regional floras (the Jepson and Intermountain Flora) have resulted in a number of recent name changes, which have been included in this version of the booklet. Whenever possible, we have used names and authorities provided by the Oregon Checklist Project at the Oregon State University Herbarium. More information on this project is included in the following section.

In 1987, Oregon legislators passed Senate Bill 533 (unofficially the "Oregon Endangered Species Act") at the urging of the Native Plant Society of Oregon and others in the state's botanical community. This bill, and its accompanying statutes (ORS 564.100 through 564.135), directed the state Department of Agriculture (ODA) to conserve and protect those native plant species facing the greatest threats to their survival. The resulting Endangered Species Program (now integrated into the Native Plant Conservation Program in ODA's Plant Division) was initiated in 1988. Currently, there are 60 plant species listed as threatened or endangered in the State of Oregon.

The Native Plant Conservation Program works with governmental agencies, non-governmental organizations, universities, businesses, and individuals to conserve Oregon's rich natural heritage of native plant diversity. This is achieved through two avenues: research and regulation. The research conducted by program staff focuses on taxonomic questions, reproductive biology, disturbance ecology, and population augmentation and creation, providing data in support of listing or delisting species. Such biologically-based projects are critical to the development of accurate status determinations for many rare plants, including formally listed species, candidate taxa, and species of concern.

On the regulatory side, ODA is responsible for setting the guidelines on listing, reclassification, and delisting plant species as threatened or endangered. In addition, the program is charged with developing and

administering a permit system which regulates commercial and research actions involving state-listed plant species. Any person or organization planning to study, collect, cultivate, transplant, reintroduce, or otherwise work with or impact a listed species (for commercial or research purposes) must first apply in advance for a written permit from ODA. If the application is approved, the permittee then provides an annual summary describing completed or ongoing activities for each listed species (see OAR 603-073-0100 and -0110). Regular permits are currently issued free of charge, though ODA may request reasonable reimbursement from applicants for any costs incurred by the department during follow-up permit reviews, report evaluations, or for special services. Contact Bob Meinke or Rebecca Currin if you have any questions regarding permits.

With the exception of the state's ability to regulate the import, export, and commercial trafficking of threatened and endangered plants, Oregon's conservation authority regarding state-listed plants presently extends only to non-federal public lands (state, city, county, public schools and utilities, etc.). Although the statutes do not require private or federal land owners to safeguard species protected under state law, ODA is willing to cooperate with the owners or managers of such lands in conservation efforts if they request assistance. Since 1988, ODA has collaborated with federal agencies such as the Forest Service and BLM (as well as with private organizations and individuals) on over 150 plant conservation research and recovery projects.

ODA has also adopted administrative rules (OAR 603-73-001 through 603-73-0090) that describe departmental procedures for the state listing, reclassification, or de-listing of plant species as threatened or endangered; how to go about petitioning ODA for the listing or delisting of a species; and the regulations and programs designed to assist and direct state land management agencies in their important roles involving native plant protection. If you are interested in learning how state agencies are required to protect listed plant species, or wish to review other laws and regulations governing threatened and endangered plant management in Oregon, you may download the complete rules at:

http://arcweb.sos.state.or.us/rules/OARS_600/OAR_603/603_073.html

Alternatively, you may write to ODA and ask for a copy of the endangered plant species administrative rules (please cite OAR 603-73-001 through 603-73-0110). Address your request to:

Native Plant Society of Oregon (NPSO) Plant Protection and Education Programs

NPSO has had a long history of working to increase the knowledge and protection of rare plants in Oregon. From involvement in the original Oregon Rare and Endangered Plant Project (1972-1982), to writing and passage of the Oregon Endangered Species Act of 1987, NPSO members have been at the forefront of plant conservation in our state.

In addition to sponsoring and supporting endangered species legislation, NPSO carries on its own rare plant protection program. Members in 13 chapters across the state monitor rare plants in each area, and report findings to our state R&E chair. This information is then incorporated into ORNHIC's databases. In addition, each chapter has an active schedule of programs, workshops, and field trips. Our monthly *Bulletin*, and annual journal, *Kalmiopsis* feature articles on Oregon R&E species. New members are always welcome. Please visit our website below for more information about NPSO's Rare & Endangered Plant Program. For information contact us at:

Oregon Flora Project

The goal of the Oregon Flora Project (OFP) is to provide the public with comprehensive information on the vascular plants growing without cultivation in Oregon. In an effort to achieve this goal, project participants are working on an Oregon checklist, flora, photo gallery, and atlas of plant distributions. As various components of the project are completed or updated, they are released to the public via the OFP website, <http://www.oregonflora.org>. The OFP is housed at Oregon State University and is closely associated with the OSU Herbarium. The work is accomplished by scores of participants, most of whom are volunteers.

The **Oregon Vascular Plant Checklist** serves as the foundation of the OFP by providing a nomenclatural framework for use in the atlas, photo gallery, and flora. When completed, the checklist will include all native and exotic species, subspecies, and varieties (taxa) confirmed to grow in Oregon without cultivation, either currently or historically. Each entry will list the taxon's accepted scientific name, synonyms, common name, plant origin (native or exotic), and key bibliographic references. As of February 2007, OFP has compiled and confirmed a list of 4,516 taxa. Proposed changes in nomenclature are scheduled for review by the taxonomic specialists of the Checklist committee. Upon completion of the review process in Spring of 2007, the Checklist should encompass ~4,520 taxa, representing both the inclusion of ca.135 new plant concepts and the exclusion of ca.130 previously recognized concepts. A copy of the Checklist will be posted on the OFP website.

The **Oregon Vascular Plant Atlas** is an online mapping tool that creates distribution maps for all of Oregon's vascular plant species. Atlas users become mapmakers, designing each map to show up to six taxa, and an Oregon base map of their choice. Four different base maps are currently offered, depicting landforms, ecoregions, mean annual precipitation, and county lines. A relational database houses the information used to map taxa, and the details about each plant occurrence (excluding sensitive plant localities) are available by clicking the computer mouse on a mapped point. Information is derived from herbarium specimens as well as species lists, research, and survey projects. Data have been obtained from collaborators in numerous Pacific Northwest institutions, the Native Plant Society of

Oregon (NPSO), ORNHIC, and hundreds of individuals. In Spring 2007 there were approximately 430,000 records in the online database. The mapping program can be accessed at

<http://www.oregonflora.org/oregonplantatlas.html>.

The **Flora of Oregon** will be paper published as a one-volume manual of the vascular plants of Oregon, and will include identification keys, illustrations, and species descriptions. A digital presentation of the Flora data will also feature a multiple entry key for identifying Oregon plants.

The **Oregon Flora Photo Gallery** is an online resource that will ultimately house multiple images of each species, subspecies, and variety of noncultivated plant in Oregon. Images will include photographs depicting the plant's habitat, its general habit, details of important characters, a representative herbarium specimen, and as available, technical illustrations. OFP is pleased to accept contributed images of plants that are accompanied by an identification and available locality data. As with the other online features, the Photo Gallery will be searchable and available to the public.

Digital presentation of Oregon Flora Project data is one of our most important goals. The digital format of these resources provides the user with enormous flexibility in satisfying his/her particular data needs. It also gives the Flora Project staff the ability to update and improve the data, making the OFP a timeless reference. Software being developed in collaboration with the Northwest Alliance for Computational Science & Engineering (<http://www.nacse.org>) at OSU will link all the components of the OFP. Users will have access to data on any Oregon plant to an unprecedented depth, including checklist information, technical descriptions, photographs, illustrations, and distribution maps.

The OFP Coordinator is Linda Hardison, and OFP currently has two professional staff and numerous student workers and volunteers. Additional key participants include 19 project leaders, ten checklist

advisory board members, eight Atlas project regional coordinators, and the NPSO State Atlas Coordinator, who helps gather data for inclusion in the Atlas and acts as liaison between project staff and contributors from NPSO. Collectively, participants' backgrounds encompass plant taxonomy, ecology, horticulture, cartography, GIS, software development, and statistics. The vast majority of OFP participants are volunteers. To date, thousands of volunteer hours have been donated by hundreds of professionals and amateurs alike.

Since its inception in 1994, approximately 50% of the OFP's funding has come from donations made by individuals, plant-oriented organizations, and the sponsorship of the Native Plant Society of Oregon. Competitive awards have covered the balance of our expenses. A one-time grant from the Bureau of Land Management, as well as grants from small foundations, societies, and corporations have provided seed money for a number of project activities and have indirectly supported the compilation of primary data. Federal grants for two collaborative projects provided funding for software development and for the databasing of OSU Herbarium specimens. OFP continues to search for funding opportunities to help accomplish project goals in a timely manner.

To learn more about the project, visit our web site at <http://www.oregonflora.org>. There you can access the Atlas mapping program and utilize the searchable Asteraceae checklist. You can also read the online version of the *Oregon Flora Newsletter*, which is published three times a year. DROPS AND NAME CHANGES

Vascular Plants

<i>Astragalus tetrapterus</i>	Dropped, too common
<i>Aster breweri</i>	Name change, now called <i>Eucephalus breweri</i>
<i>Aster curtus</i>	Name change, now called <i>Sericocarpus rigidus</i>
<i>Aster gormanii</i>	Name change, now called <i>Eucephalus gormanii</i>
<i>Aster sibiricus</i> var. <i>meritus</i>	Name change, now called <i>Eurybia merita</i>
<i>Aster vialis</i>	Name change, now called <i>Eucephalus vialis</i>
<i>Carex integra</i>	Dropped, too common
<i>Carex interiori</i>	Dropped, too common
<i>Carex praticola</i>	Dropped, too common
<i>Carex</i> sp. (SW OR pops. <i>Carex livida</i>)	Name change, now called <i>Carex klamathensis</i>
<i>Castilleja pallescens</i> var. <i>inverta</i>	Dropped, too common
<i>Caulanthus crassicaulis</i>	Name change, should have been <i>C. crassicaulis</i> var. <i>crassicaulis</i> to distinguish from recently added <i>C. crassicaulis</i> var. <i>glaber</i>
<i>Cyripedium calceolus</i> var. <i>parviflorum</i>	Dropped, not documented from the state
<i>Lasthenia macrantha</i> ssp. <i>prisca</i>	Name change, elevated to species level, now called <i>L. ornduffii</i>
<i>Lithophragma heterophyllum</i>	Dropped, too common
<i>Lomatium salmoniflorum</i>	Dropped, not documented from the state, only known collection misidentified
<i>Lupinus lapidicola</i>	Dropped, not documented from the state, collections annotated to <i>L. albifrons</i> var. <i>albifrons</i>
<i>Mirabilis bigelovii</i> var. <i>retrorsa</i>	Name change, now called <i>Mirabilis laevis</i> var. <i>retrorsa</i>

DROPS AND NAME CHANGES (continued)

<i>Monardella glauca</i>	Dropped, not documented from the state; misidentification
<i>Navarretia subuligera</i>	Dropped, too common
<i>Navarretia tagetina</i>	Dropped, too common
<i>Pediocactus simpsonii</i> var. <i>robustior</i>	Dropped, not documented from the state; ours now called <i>P. nigrispinus</i>
<i>Ranunculus reconditus</i>	Name change, now called <i>R. triternatus</i>
<i>Scirpus subterminalis</i>	Name change, now called <i>Schoenoplectus subterminalis</i>
<i>Scribneria bolanderi</i>	Dropped, too common
<i>Silene californica</i>	Dropped, not documented from the state, ours now called <i>S. serpentinicola</i>
<i>Smilax jamesii</i>	Dropped, not documented from the state
<i>Verbena hastata</i>	Dropped, too common

Fungi

<i>Albatrellus caeruleoporus</i>	Spelling corrected to <i>Albatrellus caeruleoporus</i>
<i>Albatrellus skamanianus</i>	Spelling corrected to <i>Albatrellus skamanius</i>
<i>Balsamia nigrens</i>	Spelling corrected to <i>Balsamia nigrescens</i>
<i>Catathelasma ventricosa</i>	Spelling corrected to <i>Catathelasma ventricosum</i>
<i>Cyphellostereum laeve</i>	Dropped, not documented from the state, misidentified
<i>Gomphus bonarii</i>	Synonym of common species (<i>Gomphus floccosus</i>) not listed
<i>Gymnopilus punctifolius</i>	Dropped, too common
<i>Gyromitra californica</i>	Name change, now called <i>Pseudorhizina californica</i>
<i>Helvella maculata</i>	Dropped, too common
<i>Lyophyllum soldipes</i>	Spelling corrected to <i>Lyophyllum solidipes</i>
<i>Martellia fragrans</i>	Name change, now called <i>Gymnomyces fragrans</i>
<i>Martellia idahoensis</i>	Name change, now called <i>Cystangium idahoensis</i>
<i>Mycena quinaultensis</i>	Spelling corrected to <i>Mycena quinaultensis</i>
<i>Octavianina cyanescens</i>	Spelling corrected to <i>Octaviania cyanescens</i>
<i>Octavianina macrospora</i>	Spelling corrected to <i>Octaviania macrospora</i>
<i>Phaeocollybia olivacea</i>	Dropped, too common
<i>Pholiota albivelata</i>	Name change, now called <i>Stropharia albovelata</i>
<i>Psathyrella quericola</i>	Spelling corrected to <i>Psathyrella quercicola</i>
<i>Rhizopogon masonae</i>	Spelling corrected to <i>Rhizopogon masoniae</i>
<i>Rhizopogon subpurpureus</i>	Spelling corrected to <i>Rhizopogon subpurpurascens</i>
<i>Sarcosoma latahense</i>	Dropped, too common
<i>Tephrocycbe rancida</i>	Synonym (<i>Lyophyllum rancidum</i>) already dropped in 2004 list

Lichens

<i>Cetrelia cetrarioides</i>	Dropped, too common
<i>Chaenotheca ferruginea</i>	Dropped, too common
<i>Chaenotheca furfuracea</i>	Dropped, too common
<i>Chaenothecopsis pusilla</i>	Dropped, too common
<i>Chromatochlamys muscorum</i> var. <i>octospora</i>	Name change, now called <i>Thelenella muscorum</i> var. <i>octospora</i>
<i>Dermatocarpon luridum</i>	Dropped, not documented from the state; ours now called <i>D. meiophyllizum</i>
<i>Heterodermia leucomelos</i>	Name change, now called <i>Heterodermia leucomela</i>
<i>Leptogium brebissonii</i>	Dropped, too common
<i>Leptogium rivulare</i>	Spelling corrected to <i>Leptogium rivale</i>
<i>Leptogium saturninum</i>	Dropped, too common
<i>Pannaria malmei</i>	Dropped, not documented from the state, ours now called <i>Pannaria rubiginella</i>
<i>Parmelina quercina</i>	Dropped, too common

Liverworts

<i>Metzgeria temperata</i>	Dropped, not documented from the state; ours now called <i>Metzgeria violacea</i>
----------------------------	---

Mosses

<i>Anomobryum filiforme</i>	Name change, now called <i>Anomobryum julaceum</i>
<i>Calliergon trifarium</i>	Name change, now called <i>Pseudocalliergon trifarium</i>
<i>Crumia latifolia</i>	Dropped, too common
<i>Encalypta brevicolla</i> var. <i>crumiana</i>	Variety no longer recognized, now called <i>Encalypta brevicollis</i>
<i>Fabronia pusilla</i>	Dropped, too common
<i>Fissidens grandifrons</i>	Dropped, too common
<i>Fissidens pauperculus</i>	Dropped, too common
<i>Funaria muhlenbergii</i>	Dropped, too common
<i>Hedwigia detonsa</i>	Dropped, too common
<i>Hedwigia stellata</i>	Dropped, too common
<i>Plagiopus oederiana</i>	Name change, now called <i>Plagiopus oederianus</i>
<i>Racomitrium aquaticum</i>	Dropped, excluded from North America. Our plants now called <i>Codriophorus rysardii</i>
<i>Racomitrium depressum</i>	Name change, now called <i>Codriophorus depressus</i>
<i>Rhizomnium nudum</i>	Dropped, too common
<i>Tripterocladium leucocladulum</i>	Dropped, too common

ACKNOWLEDGMENTS

ANIMALS

Revisions to the current edition included status changes made by ODFW, USFWS and NOAA Fisheries. Our thanks to these agencies for their continued efforts to protect and study Oregon's fauna. Our appreciation goes, as always, to the many vertebrate and invertebrate biologists who contributed directly or indirectly and whose comments and criticisms were incorporated into this booklet.

PLANTS AND FUNGI

Many of the changes made since the last edition of this booklet in 2004, resulted from the Rare and Endangered Plant Conference held at Oregon State University, Corvallis, Oregon in October 2006. We thank all conference participants and others who have contributed to this project. Many of the improvements in the information included in this booklet are a result of efforts by the professional botanists of the Oregon Department of Agriculture, the U.S. Forest Service and the Bureau of Land Management, and the amateur and professional botanists of the Native Plant Society of Oregon.

Michael Castellano of the USFS volunteered to compile the much-expanded list of fungi, coordinating input from numerous agency and university mycologists, as well as the Oregon Mycological Society. Most of the Heritage ranks included are a result of his work.

Special thanks go to Kenton Chambers, Professor Emeritus at Oregon State University, who serves as the flowering plant taxonomic arbiter for ORNHIC and for this publication.

Primary sources of expertise for this edition include:

Carex: Carex working group (Richard Brainerd, Manuela Huso, Keli Kuykendall, Danna Lytjen, Bruce Newhouse, Nick Otting, Barbara Wilson and Peter Zika).

Ferns: Ed Alverson, Frank Lang, David Wagner and Peter Zika.

Liverworts: John Christy, Richard Helliwell, Dave Kofranek, Daphne Stone, and David Wagner.
