For Soothing Relief & Immune Support

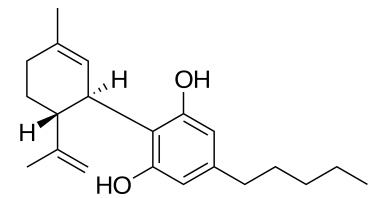

Cannabidiol (CBD) from hemp is one of the hottest supplements on the market. But not everyone is comfortable with hemp or can legally access it. That's just one reason Phyto Farmacy is excited to announce a breakthrough discovery: a 100% natural, botanical CBD supplement made exclusively from a unique Asian hops variety.

- Not Made from Cannabis
- Naturally 100% THC-Free
- Legal Worldwide
- Superior Bioactivity

A Patented, Naturally THC-Free Hybrid

ImmunAG™ is a cannabinoid-rich extract of Asian hops vine (*Humulus yunnanensis*) flowers, available in time-release tablets and fast-acting oral tinctures. The patented Humulus Kriya™ cultivar of Asian hops contains high levels of the non-psychoactive cannabinoids CBD, CBG, CBC and the medicinal terpenes caryophyllene & humulene. This remarkable plant naturally contains zero THC: not even in the smallest trace amounts. Kriya™ hops is a close relative of the common hops vine used for brewing beer. Scientists believe that the hops species originally evolved from hemp around 27 million years ago.

CBDx™
(Cannabidiol from *Humulus Yunnanensis* var Kriya)

Gentle Yet Powerful Immune Support

ImmunAG™ is gentle but it has powerful balancing effects on the human endocannabinoid system. Yet unlike cannabis products, ImmunAG™ doesn't come with the risk of intoxication, paranoia, cognitive impairment or other unwelcome effects. The active compounds in ImmunAG™ act as natural, plant-based neurotransmitters that activate CB2 receptors in our immune system, gut, bones and brain – in addition to many other receptors. In 2011 Dr. Mechoulam, the world's leading cannabinoid expert, published a study documenting how imbalances of endocannabinoids & CB2 receptors are implicated in most major diseases.¹

Rapid & Timed Release Formulas

1. 7.5mg Timed Release Tablets
2. 40mg Timed Release Tablets
3. 100mg Timed Release Tablets
4. 900mg in MCT Oil
5. 300mg in Coconut Oil

Available in tablets and oils, starting at \$65 MSRP.

CBD + Terpene Synergy

Phyto Farmacy

+1(888)337-4986

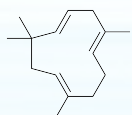

The 3 main, active ingredients of ImmunAG all work together in synergy:

- **CBD** is documented to have anti-anxiety, antidepressant, antipsychotic, anti-inflammatory, anti-arthritic and anti-tumor properties.²

- **Caryophyllene** has been described by medical researchers as having anti-inflammatory, antioxidant, anti-microbial and anti-tumor properties.³

- **Humulene** is a potent anti-inflammatory.⁴ A 2010 study found that humulene can decrease malignant cell growth by 50%. When humulene was combined with caryophyllene, malignant cell growth decreased by 75%.⁵

ImmunAG™ Outperforms Synthetic & Hemp-Derived CBD

Not all CBD is created equal! “Bioactivity” refers to how much effect a substance actually has upon the body once it gets absorbed. Only one type of CBD, Δ^2 -CBD, is found in nature. Other inferior types of CBD are created when the molecule is made synthetically or gets denatured through heating or processing. In addition, the CBD extracted from different parts of the same plant can be significantly less bioactive (potent).

In one analytical study, we discovered that bioactivity levels among cannabis-derived commercial CBD products were quite low and variable. ImmunAG had at least 76% higher bioactivity.⁶ A recent study by Dr. Luisa Rocha at *The Center of Research and Advanced Studies* suggests that CBD may calm a serotonin receptor that can trigger epilepsy. Three different types of CBD were tested for their ability to reduce seizures in rats. At high doses, synthetic CBD reduced seizures by 20% and hemp CBD reduced seizures by 60%. Only ImmunAG™ was able to stop all seizures 100%. We believe that the high bioactivity of hops-derived CBD is what makes such a big difference!

5 Different ImmunAG™ Products to Fit Your Exact Needs

ImmunAG™ is available in two forms: in tiny, round timed release tablets that are engineered to sustain therapeutic blood plasma levels for up to 6 hours per dose and also in fast-acting liquid tinctures.

1. **ImmunAG™ 7.5mg Timed Release Tablets. \$65 MSRP.**
2. **ImmunAG™ 40mg Timed Release Tablets. \$145 MSRP.**
3. **ImmunAG™ 100mg Timed Release Tablets. \$320 MSRP.**
4. **ImmunAG™ 900mg MCT Oil. \$165 MSRP.**
5. **ImmunAG™ 300mg Coconut Oil. \$85 MSRP.**
