

Mixed Flats – Pollinator Friendly

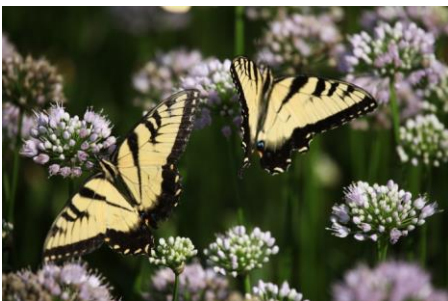

Pollinators are under increasing pressure as habitat diminishes. Green roofs can help extend some relief, if designed properly. Our pollinator friendly mixed flats offer the perfect variety of plants to attract pollinators to the green roof. Hand picked by our experienced staff, these species provide pollen, nectar, and larval sources for local pollinators. These plants have strong, long season faunal associations and are tried and true on extensive green roofs. Our goal with these mixed flats is to offer a product that can be specified not only on new green roofs, but also on existing green roofs, to increase pollinator activity in both planned and existing green spaces.
