

High Mountain Pasture

Artemisia granatensis

Erigeron frigidus

Iberis embergerii

Linaria nevadensis

Nevadensia purpurea

Can be seen in the summit areas on consolidated soils.

Its botanical value is very high due to the endemic species of the Sierra Nevada that are present in this plant formation.

Among the notable species that typify these grasslands are the royal chamomile (*Artemisia granatensis*), along with other less known plants such as the *Erigeron frigidus*, *Festuca clementei*, *Trisetum glaciale*, etc.
