

Coastal Boobialla

Myoporum boninense subsp. australe
myo-POOR-um bon-IN-ense subsp. oss-TRAH-lee

Category: Ground cover/Low-growing
Under 1m

Height: 1 metre

Spread: Variable

Full sun

Drought tolerant
once established

Well-drained soils

Insect attracting

Traditional use
plant

This hardy attractive plant can grow as a small shrub or sprawling prostrate ground cover.

Produces clusters of small white flowers through spring and summer, followed by smooth vibrant light to dark purple fruit. This plant naturally grows in coastal areas and would make a great addition to a garden bed. Looks great planted en masse.

HOT TIP:

Regular light pruning will encourage bushiness.
