1.2. Reporting person(s)

Pham Van The, Trinh Ngoc Bon, Phan Ke Loc

1.3. Purpose

The purpose of the “Plants Group” is “Study on the flora and vegetation in northern Vietnam for species inventory, sustainable development and utilization”. The surveys were proposed to conduct in four protected areas including: 1) Cham Chu Nature Reserve (NR) of Tuyen Quang; 2) Bac Me NR of Ha Giang; 3) Phia Oac-Phia Den National Park (NP) of Cao Bang and; 4) Nam Xuan Lac Species and Habitat Conservation Area (SHCA) of Bac Kan provinces

1.4. Objectives

- Diversity and distribution assessment of vascular plants in the study area.
- Diversity and distribution assessment of vascular plants along gradient elevation in limestone mountains.
- Assessment on distribution and conservation status of rare and threatened, economic, and medicine species for long-term biodiversity monitoring purpose. Especially focus on *Cyathea*, Conifers, Magnolias, Orchids, Hoyas, *Aspidistra* groups.
- Training students including under and graduated students, and young researchers.
- Writing and publishing articles about the result which obtains from the project.

1.5. Reporting period

Three years: from 1 October 2018 to 30 September 2021

II. PROGRESS TO DATE

2.1 Summary

During the three years of the project, a total of 1769 species of 797 genera in 203 families were recorded from four protected areas. They belong to four phyla including Magnoliophyta, Polypodiophyta, Gnetophyta, and Pinophyta. Most of the plants belong to Magoliophyta with 1638 species in 728 genera and 167 families. The Pinophyta composes 10 species in nine genera and five families. The area with the highest number of plant species is Cham Chu NR with 1,089 species, followed by Bac Me NR with 1037 species, Phia Oac – Phia Den NP with 822 species, and Nam Xuan Lac SHCA with 774.

Ten families with species richest include Lamiaceae with 40 species (2.26 % of the total recorded species), Malvaceae with 40 species (2.26%), Moraceae with 41 species (2.32%), Asteraceae with 42 (2.37%), Lauraceae with 54 species (3.05%), Euphorbiaceae with 64 species (3.62%), Poaceae with 66 species (3.73%), Orchidaceae with 68 species (3.84%), Fabaceae with 70 species (3.96%), and Rubiaceae with 74 (4.18%). Ten genera recorded with species richest in the four study areas include *Hedyotis* with 11 species (0.62% of the total recorded species), *Dioscorea* with 12 species (0.68%), *Litsea* with 12 species (0.68%), *Symplocos* with 12 species (0.68%), *Begonia* with 13 species (0.73%), *Lithocarpus* with 14 species (0.79%), *Rubus* with 14 species (0.79), *Syzygium* with 15 species (0.85%), *Magnolia* with 16 species (0.90%), and *Ficus* with 29 species (1.64%).

Most species recorded are a woody tree with 644 species, followed by herb with 523 species, shrub with 303 species, liana with 209 species, epiphyte (Epiph.) with 62 species, bambusoid (Bambu.) with 17 species, palm with 6 species, and aquatic with 2 species. In the four study areas, the total of species could be used as medicine plant are 753 species, followed by woody plants used for construction or furniture with 455 species, ornamental plants with 262 species, edible plants with 223 species, animal food plants with 92 species, bioactive plants with 50 species, fiber plants with 37 species and poisonous plant with 22 species.

Most species were found at around 1000 m a.s.l., the species reduced when elevation higher. The plant species composition in Nam Xuan Lac SHCA is most similar to that of Bac Me NR and Cham Chu NR. The species composition in Phia Oac – Phia Den NP is sometimes similar to that of Nam Xuan Lac SHCA and Cham Chu NR.

A total of 169 species were listed for national and international conservation and management priorities (Annex 4). Of which, 22 species were listed in IUCN Redlist of threatened species (2018), 78 species were listed in Vietnam Red Data Book (MOST and VAST, 2007), and 106 species were listed in Decree No. 06/2019/NĐ-CP of Vietnamese National Government, and 35 species were listed in CITES 2007.

The group has published four articles, submitted three manuscripts, and completed a guideline. On the other hand, two manuscripts in writing. In addition, four reports have been presented in workshops and seminars. For the education of young scientists, a BSc student graduated from the project, a Ph.D. student benefited from improving on plant field survey techniques and data collection. Two assistants were trained in field survey organization, and plant

investigation skills on line-transect, and plot. On the other hand, eight staff of the Phia Oac – Phia Den National Park were trained in “Biodiversity Investigation and Monitoring”.

2.2 Results of literature review

2.2.1. Cham Chu NR, Tuyen Quang Province

Cham Chu was established under Decision No. 1536/QĐ-UBND dated 21/09/2001 of the People's Committee of Tuyen Quang. The geographical coordinates of the NR from $22^{\circ}14'17''$ to $22^{\circ}21'307''$ N, and from $104^{\circ}53'27''$ to $105^{\circ}14'16''$ E. The protected area with a total of 15,902.1 hectares is located in the five communes: Yen Thuan, Phu Luu in Ham Yen district, Ha Lang, Trung Ha, and Hoa Phu in Chiem Hoa district. There are 29,703 persons belonging to 6,832 families of eight groups people living in the Cham Chu NR. The most group of people are Tay with about 15,522 persons, Dao with 7,343 persons, and Kinh with 4,749 persons. Almost local people are living based on agriculture and forestry.

According to the People's Committee of Tuyen Quang (2001), there were more than 1,500 plant species recorded in the Cham Chu NR. Of which, there were some threatened species such as Hoàng đàn - *Cupressus tonkinensis*, Pơ mu - *Fokienia hodginsii*, Thông tre - *Podocarpus neriifolius*, Nghién - *Burretiodendron hsienmu*, Trai lý - *Garcinia fragraeoides*, Gù hường - *Cinnamomum parthenoxylon*, Chò chỉ - *Parashorea chinensis*. The planning report of the Department of Agriculture and Rural Development of Tuyen Quang Province (DARD Tuyen Quang, 2014) reported 906 plant species belonging to 137 families from Cham Chu NR.

According to Nguyen Trung Thanh & Chu Thai Ha (2009), Cham Chu NR was composed about 747 plant species. A total of 443 medicinal plant species were recorded in Cham Chu Nature Reserve Area belonging to 325 genera and 120 families (Pham Thi Oanh *et al.* 2018). Most of the medicinal plant species in Cham Chu Nature Reserve Area are Angiosperms with 425 species (95.94%) (360 species of Dicotyledonae, 65 species of Monocotyledonae), 6 species belong to the Gymnosperms (1.35%), 10 species are Polypodiophyta (2.26%), Psilotophyta and Lycopodiophyta are only one species (0.23%). The richest 3 families are Euphorbiaceae with 22 (4.97%) species, Rubiaceae with 17 (3.83%) species, and Asteraceae ranks third, with 16 (3.61%) species, respectively. In 2017, a newly recorded species, *Ficus squamosa* was reported from Cham Chu NR (Pham Thi Oanh *et al.* 2017)

2.2.2. Bac Me NR, Ha Giang Province

Bac Me NR was established under Decision No. 648/QĐ-UBND dated November 24, 1994, of the People's Committee of Ha Giang province with a total natural area of 9,016.3 hectares. The Nature Reserve is located in the three communes: Lac Nong, Minh Ngoc, and Thuong Tan in Bac Me district. The geographical coordinates according to VN2000 of the protected area are from $22^{\circ}38'59''$ to $22^{\circ}45'47''$ N, and from $105^{\circ}07'40''$ to $105^{\circ}16'35''$ E.

The limestone karst area in Bac Me Nature Reserve is the distribution of rare flora species such as *Dacrycarpus imbricatus*, *Podocarpus neriifolius* (Phan *et al.* 2007). According to Vu Anh Tai (2014), 2,890 species of plants have been recorded in Ha Giang province. Of which, 157 species were listed in the Vietnam Red Book 2007 and 137 species in the IUCN Red List.

In the planning report of the Department of Agriculture and Rural Development of Ha Giang Province (DARD Ha Giang, 2016), the types of natural vegetation here include:

- a) Closed tropical evergreen rain forest $\leq 700\text{m}$
- b) Tropical evergreen closed forest on limestone $\leq 700\text{m}$
- c) Closed sub-tropical evergreen rain forests on low mountains $\geq 700\text{m}$
- d) Subtropical evergreen closed forest on limestone $\geq 700\text{m}$
- e) Secondary recovered on deforested land
- f) Rehabilitated soil forest on limestone
- g) The secondary of bamboo and mixed wood – bamboo forest
- h) Grass, shrubs and scattered trees vegetation

According to the DARD Ha Giang (2016), 626 higher plant species were recorded for the Natural Reserve ([Table 1](#)[Table 1](#))

Table 1. Total number of higher plant species were recorded by DARD Ha Giang (2016)

No.	Clade	No. of family	No. of genera	No. of species
1	Lycopodiophyta	2	2	5
2	Esquisetophyta	1	1	1
3	Polypodiophyta	17	31	51
4	Pinophyta	6	6	8
5	Magnoliophyta	115	348	561
-	<i>Magnoliopsida</i>	97	288	443
-	<i>Liliopsida</i>	18	60	118
Total		141	388	626

However, scientific publications on the flora of Bac Me are still very few, while there have been those of neighboring areas such as the flora of Phong Quang Nature Reserve (Hoang *et al.* 2012), orchid species in Bat Dai Son Nature Reserve (Pham *et al.* 2007), endangered plant species in Dong Van Plateau or Ha Giang province (Nguyen *et al.* 2009, Tai & Thin 2014), or the diversity of conifers and flora of Ha Giang province (Nguyen *et al.* 2007a, b, c).

Pressure on plant diversity and conservation in Bac Me Nature Reserve includes illegal logging and collecting non-timber forest products, and land clearing for agricultural production in the buffer zone.

2.2.3. Phia Oac-Phia Den NP, Cao Bang Province

Phia Oac - Phia Den National Park was established under Decision No. 57/QD-TTg of the Prime Minister, signed on January 11, 2018. The special mission is the conservation of 90 threatened plant species. Phia Oac - Phia Den National Park has a total natural area of 10,593.5 hectares in 5 communes, Thanh Cong, Quang Thanh, Phan Thanh, Hung Dao, and Tinh Tuc town of Nguyen Binh district, Cao Bang province.

According to Tran *et al.* (2014), there were 33 plant species identified as endangered in the National Park, of which 8 species are on the IUCN Red List 2011 and 16 species are listed in Decree 32/2006/NĐ-CP dated 30/06/2006. Among them were some conservation priority species such as *Xanthocyparis vietnamensis*, *Paphiopedilum emersonii*, *Exentrodendron tonkinensis*, and *Anoectochilus setaceus*. Of the total 9 species of gymnosperm recorded for Cao Bang, only two species, *Podocarpus nerifolius*, and *Amentotaxus argotaenia* were recorded for the national park, while 7 other species were distributed in the other karst areas. (Phan *et al.* 2007). Our field studies done here so far show that at least 278 species have been recorded in this area. Synthesizing all studies, flora Phia Oac has listed 1197 species belonging to 677 genera, and 177 families of 5 Clades higher vascular flora (Le *et al.* 2012). According to the Cao Bang Department of Agriculture and Rural Development (DARD Cao Bang, 2015), the flora of Phia Oac - Phia Den National Park consists of 1123 species belonging to 199 families, of which 70 species are listed in the 2007 Vietnam Red Book as showed in **Table 2**:

Table 2. Total number of plant species were recorded by DARD Cao Bang (2015)

Vietnamese name	Scientific name	Number
Ngành khuyết lá thông	Psilotophyta	1
Ngành thông đát	Lycopodiophyta	6
Ngành mộc tặc	Equisetophyta	1
Ngành Dương xỉ	Polypodiophyta	131
Ngành hạt trần	Pinophyta	10
Ngành ngọc lan	Magnoliophyta	974

There is little knowledge about the flora of the NP which may contain many undiscovered plant species. For example, a new species of *Oreocharis caobangensis* was recently published for science in this area (Van Do *et al.* 2017). However, conservation activities here also face many difficulties such as mineral extraction, and forestry agriculture.

2.2.4. Nam Xuan Lac SHCA, Bac Kan Province

Nam Xuan Lac SHCA was approved by the People's Committee of Bac Kan province in Decision No. 342/QD-UB dated March 17, 2004, with a total natural area of 1,788 hectares,

located on the two Na Da and Ban Khang villages, Xuan Lac commune, Cho Don district, Bac Kan province.

Recent studies in the SHCA have identified 512 plant species belonging to 352 genera, 115 families, and 4 phyla as follows: Lycopodiophyta, Polypodiophyta, Pinophyta, and Magnoliophyta (Nguyen *et al.* 2011). Of these, 30 species of threatened plants were listed in the Vietnam Red Book 2007 (Nguyen *et al.* 2011). Although this area is small, it also contains high values of biodiversity. In previous field investigations and reports, many rare and rare species of orchids and conifers have been recorded (Phan *et al.* 2013). In 2017, a new species, *Ardisia phankelociana* was described in this area (Hu *et al.* 2017). The medicinal plant species in Nam Xuan Lac SHCA are diverse and abundant. According to one report, 458 species of medicinal plants, belonging to 345 genera, and 132 families of four phyla have been recorded (Nguyen 2014).

Even so, the botanical studies in this area are still scanty. Research on conservation status and threats to endangered plant species in this area should be conducted. To do this, the research method that can be used according to Hoang has been used in the vicinity of Ba Be National Park (2010).

2.3 Materials and methods

Give a clear description of materials, or subjects, including dates and locations (e.g., name of the study area/sites, physical and biological features, latitude and longitude, map, etc.) of field surveys and laboratory works, etc., together with the methods applied.

2.3.1. Study time and sites

The project was conducted for three years from 01 October 2018 to 30 September 2021 in Cham Chu NR – Tuyen Quang Province, Bac Me NR – Ha Giang Province, Phia Oac – Phia Den NP – Cao Bang Province, and Nam Xuan Lac SHCA – Bac Kan Province (Fig. 1-4). The final report was written from October to December 2021.

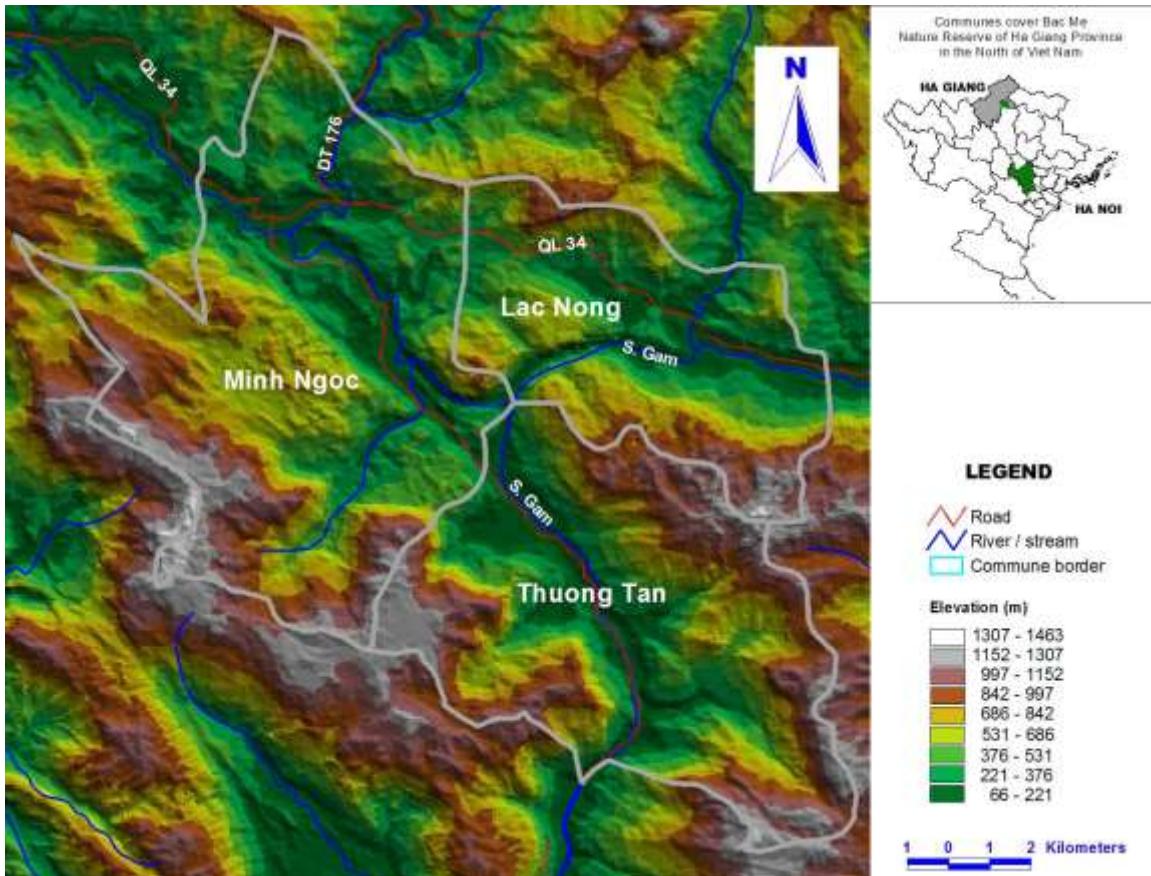

Figure 2. The map of Bac Me NR in Ha Giang Province (provided by GIS Group)

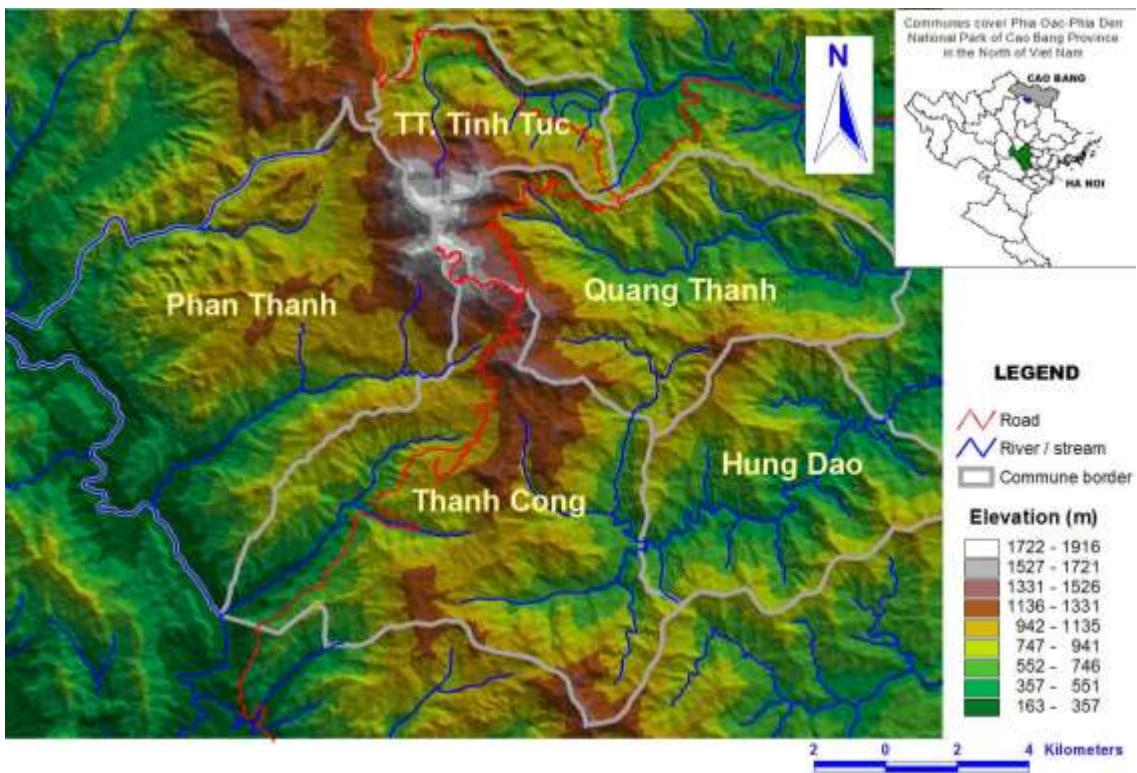

Figure 3. The map of Phia Oac - Phia Den NP in Cao Bang Province(provided by GIS Group)

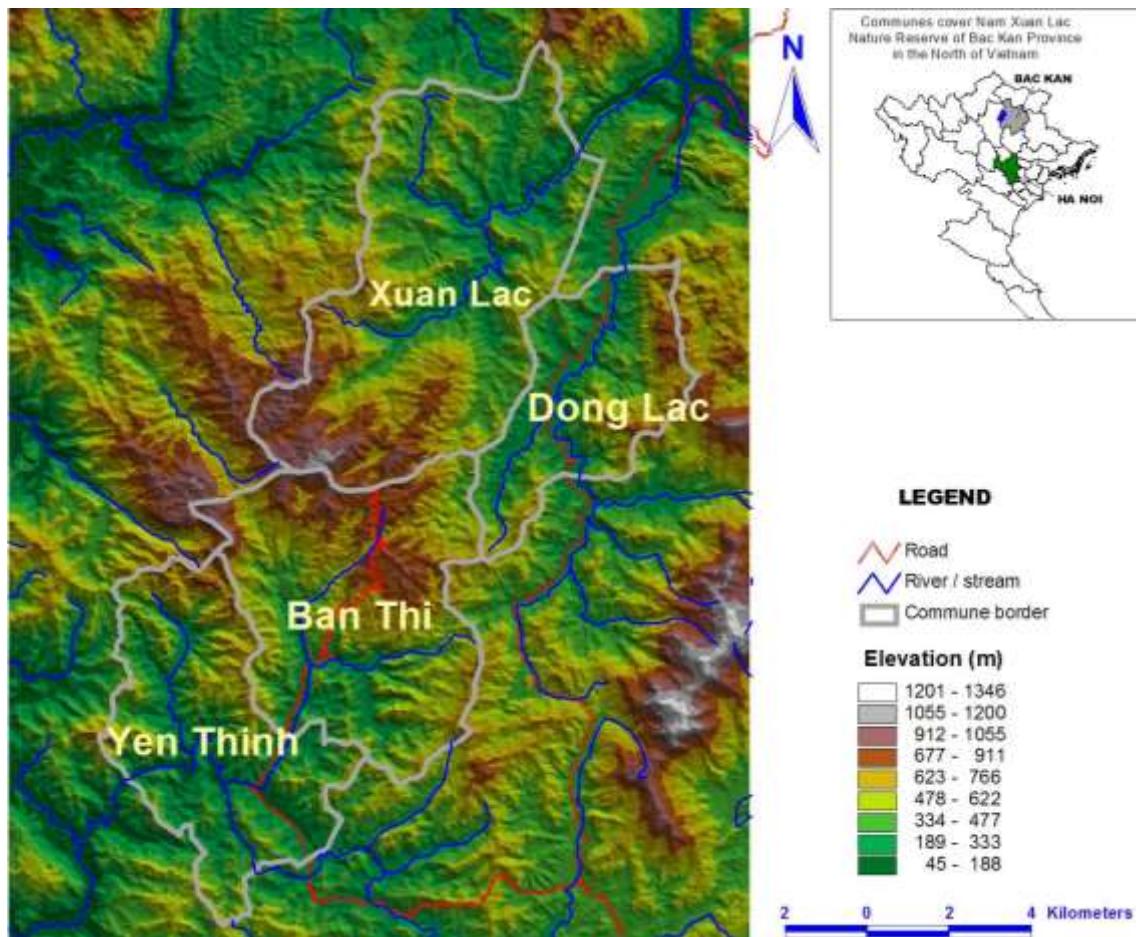

Figure 4. The map of Nam Xuan Lac SHCA in Bac Can Province (provided by GIS Group)

2.3.2. Line transects survey design

Vegetation types for the study area were preliminary identified based on provided map of the Nature Reserve Management Departments. Each habitat was surveyed at least once, by transects of at least 500m long following existing survey tracks folowing Loya (1978) and Buckland *et al.* (2007). A total of eighth field surveys were conducted during three years study (Annex 1). Photographs were taken and specimens were collected if required for later identification ([Figure 10](#)[Figure 10](#)). The detail of line transect surveys were shown in Figuges 5-9.

Figure 5. Lines transect survey in Cham Chu NR

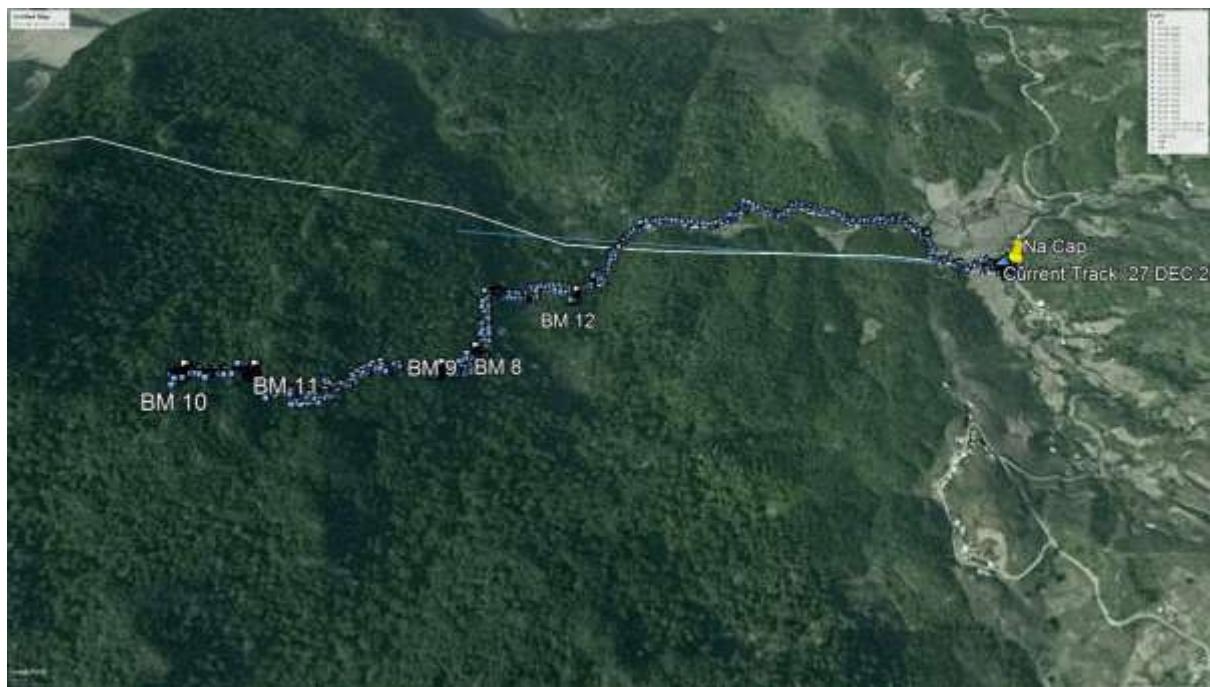

Figure 7. The line transects and plots studied in Bac Me NR

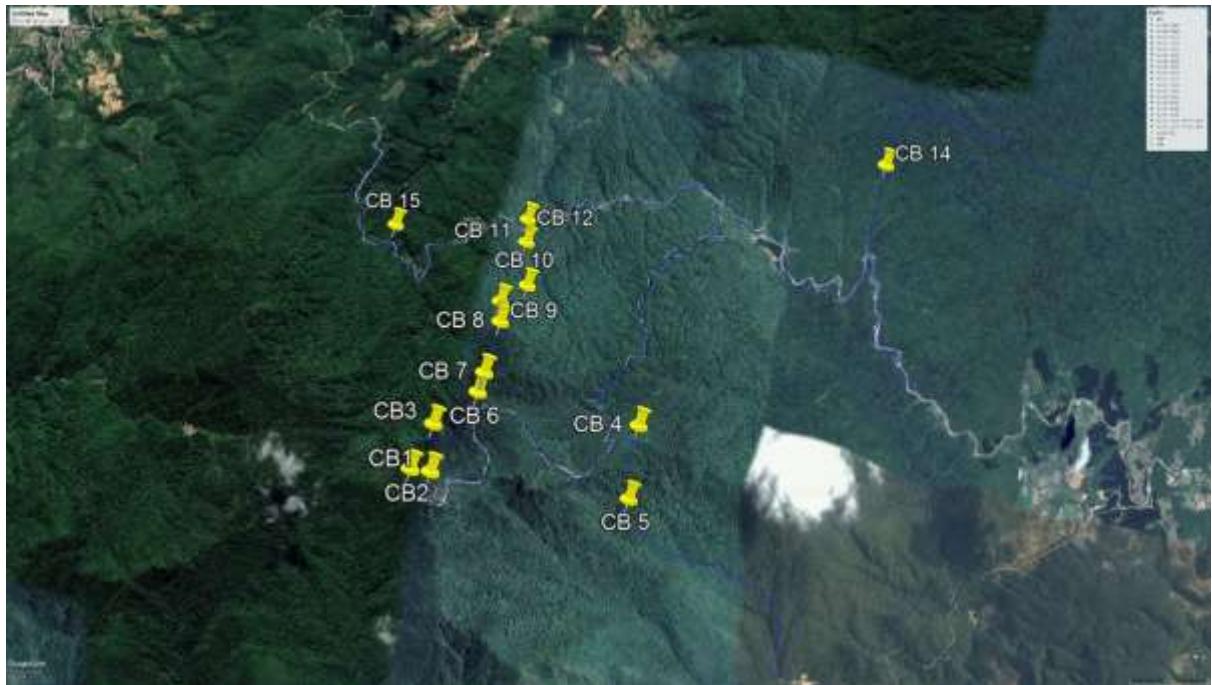

Figure 8. The line transects and plots studied in Phia Oac - Phia Den NP

Figure 9. The line transects and plots studied in Nam Xuan Lac SHCA

2.3.3. Plots survey design

Eight field trips were carried out at elevation range 331–1,914 m a.s.l. from 2018 to 2021. Because of stiff mountains, vertical line transects surveys were established along to trail to the top. A total of fifty-four plots (10×10 m) were made along line transects survey, of which, eight plots in Nam Xuan Lac SHCA were arranged at elevation of 717 – 1,067 m a.s.l., 11 plots in Cham Chu NR were set at elevation of 645 – 1,116 m a.s.l., 16 plots in Phia Oac - Phia Den NP were arranged at elevation of 1,145 – 1,914 m a.s.l., and 19 plots in Bac Me NR were arranged at elevation of

331 – 1,204 m a.s.l. The size of the plot has been used in several investigations of plant diversity (Cottam and Curtis 1956; Lu et al. 2004; Shrestha and Vetaas 2009; Manish et al. 2016). The distance between plots is at least 500 m, and the elevation distance is 100 m. In each plot, all species and individuals of the vascular plants were measured after subdividing them into four subplots just to make it easy to count. Herbarium samples were collected at least one for each for future record and documentation. All species that occurred inside the plot were identified in the field with the help of the local people as well as the author's identification knowledge. Later, confirmed identification was made in the Vietnamese Academy of Forest Science (VAFS herbarium, consultation with experts (Annex 2, Figures 5-9, [Figure 11](#)[Figure 14](#)).

2.3.4. Plant species identification

Collection and fixing specimen procedures followed the usual procedures for botanical specimens (Liesner, 1995; Maden, 2004). Plant species were preliminarily identified in the forest and checked in the laboratory through taken photos. Voucher specimens were deposited at the Herbaria of the VNU Hanoi University of Science (HNU), and the Vietnamese Academy of Forest Sciences (VAFS) (acronyms according to Thiers, 2015). Species were identified using some specific literature (such as “Flora of Vietnam” (Pham, 1999, 2000, 2003), “Flora of China” (multiple volumes) to identify plant species; Using “National Red Data Book” (2007), Government Decree No. 06/2019/NĐ-CP on management regulations of forest precious, rare and endangered species, and “IUCN Redlist” (2018) to determine threatened species; some literature to the identification of endemic, economic or medicine species (Do 2004). The system of plant species classification followed “Angiosperm Phylogeny Group” APG IV (2016). All the scientific names were nomenclature checked according to the Shenzhen code of the International Association for Plant Taxonomy (Turland et al., 2018) together with online consultation from World Flora Online, The Plant List, and International Plant Names Index websites.

2.4 Results and Discussion

2.4.1. Taxa diversity

During the three years of the project, a total of 1769 species of 797 genera in 203 families were recorded from four protected areas (Annex 3, [Table 3](#), [Figure 12](#)). They belong to four phyla including Magnoliophyta, Polypodiophyta, Gnetophyta, and Pinophyta. Most of the plants belong to Magoliophyta with 1638 species in 728 genera and 167 families. The Pinophyta composes 10 species in nine genera and five families.

Table 3. Total species, genera, and families recorded in four protected areas

Phylum	Magnoliophyta	Polypodiophyta	Gnetophyta	Pinophyta	Total
Family	167	30	1	5	203
Genus	728	59	1	9	797
Species	1638	119	2	10	1769

The area with the highest number of plant species is Cham Chu NR with 1,089 species, followed by Bac Me NR with 1037 species, Phia Oac – Phia Den NP with 822 species, and Nam

Xuan Lac SHCA with 774 ([Figure 12](#)[Figure 12](#)). Ten families with species richest include Lamiaceae with 40 species (2.26 % of the total recorded species), Malvaceae with 40 species (2.26%), Moraceae with 41 species (2.32%), Asteraceae with 42 (2.37%), Lauraceae with 54 species (3.05%), Euphorbiaceae with 64 species (3.62%), Poaceae with 66 species (3.73%), Orchidaceae with 68 species (3.84%), Fabaceae with 70 species (3.96%), and Rubiaceae with 74 (4.18%) ([Figure 13](#)[Figure 13](#)).

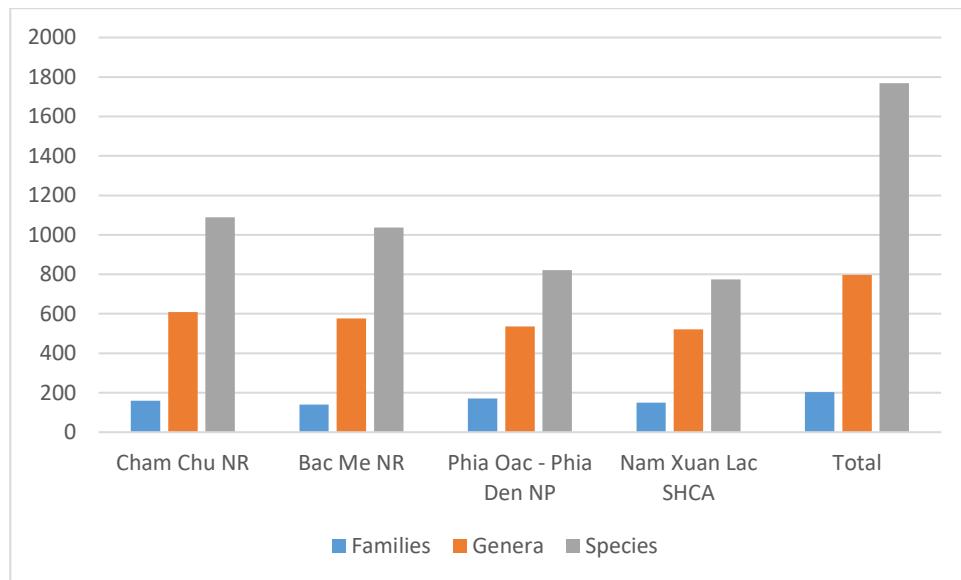

Figure 12. Number of species, genera and families recorded in study areas

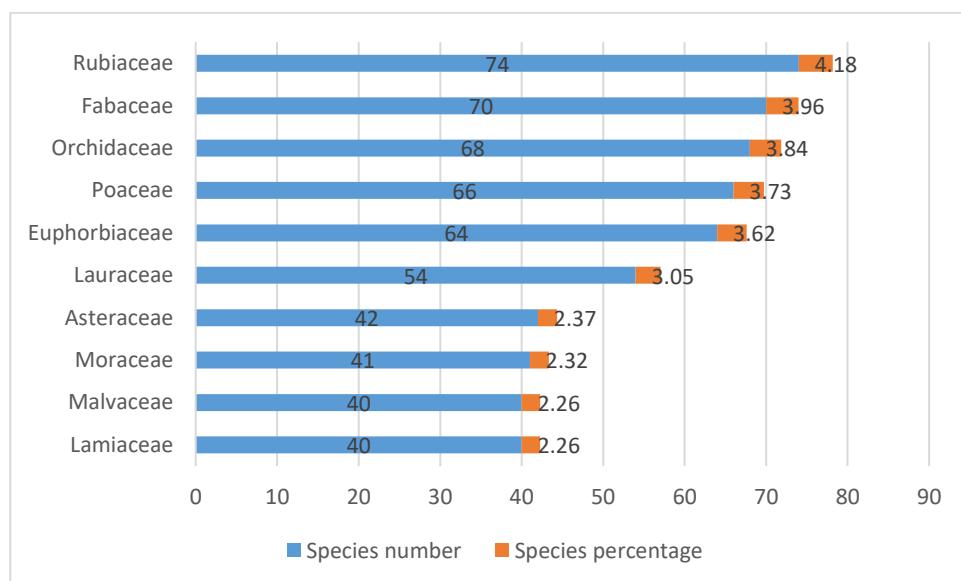

Figure 13. Ten families with species richest in four study areas

Ten genera recorded with species richest in the four study areas include *Hedyotis* with 11 species (0.62% of the total recorded species), *Dioscorea* with 12 species (0.68%), *Litsea* with 12 species (0.68%), *Symplocos* with 12 species (0.68%), *Begonia* with 13 species (0.73%), *Lithocarpus* with 14 species (0.79%), *Rubus* with 14 species (0.79), *Syzygium* with 15 species (0.85%), *Magnolia* with 16 species (0.90%), and *Ficus* with 29 species (1.64%) ([Figure 14](#)[Figure 14](#)).

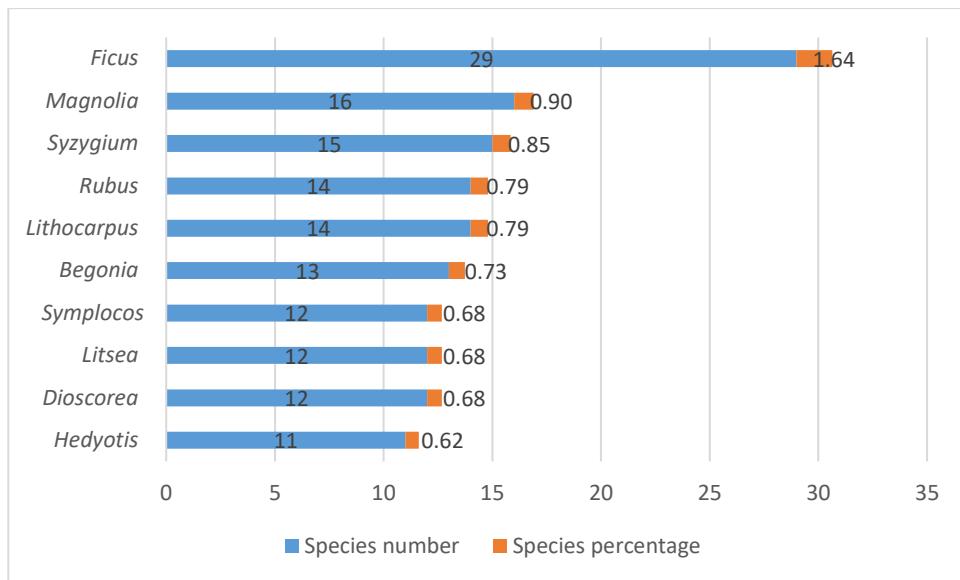

Figure 14. Ten genera with species richest in four study areas

2.4.1.1. Cham Chu Nature Reserve

A total of 1089 species of vascular plant belonging to 608 genera, 159 families, and four phyla have been recorded in the Cham Chu NR (Annex 3). The most species-rich phylum is Angiospermae with 995 recorded species (92.56% of the total obtained species). Following this, Polypodiophyta is represented by 84 species (7.71% of the total species) in 43 genera and 23 families, Pinophyta contains 8 species (0.92% of the total species), and Pinophyta composes 2 species (0.09% of the total) ([Table 4](#)[Table 4](#)).

Table 4. Species, genus, family number, and diverse percentage by phylum in the Cham Chu NR

Phylum	Family		Genus		Species	
	Number	%	Number	%	Number	%
Polypodiophyta	23	14.47	43	7.07	84	7.71
Gnetophyta	1	0.63	1	0.16	2	0.09
Pinophyta	5	3.14	8	1.32	8	0.92
Magnoliophyta	130	81.76	556	91.45	995	92.56
Total	159	100.00	608	100.00	1089	100.00

The top 10 species-richest families recorded represents 33.52% of the total species obtained. They are Fabaceae (5.05% species of the total species), Rubiaceae (4.78%), Euphorbiaceae (4.59%), Lauraceae (3.49%), Moraceae (2.94%), Asteraceae (2.75%), Poaceae (2.66%), Malvaceae (2.57%), Lamiaceae (2.39%) and Orchidaceae (2.3%) ([Figure 15](#)[Figure 15](#)).

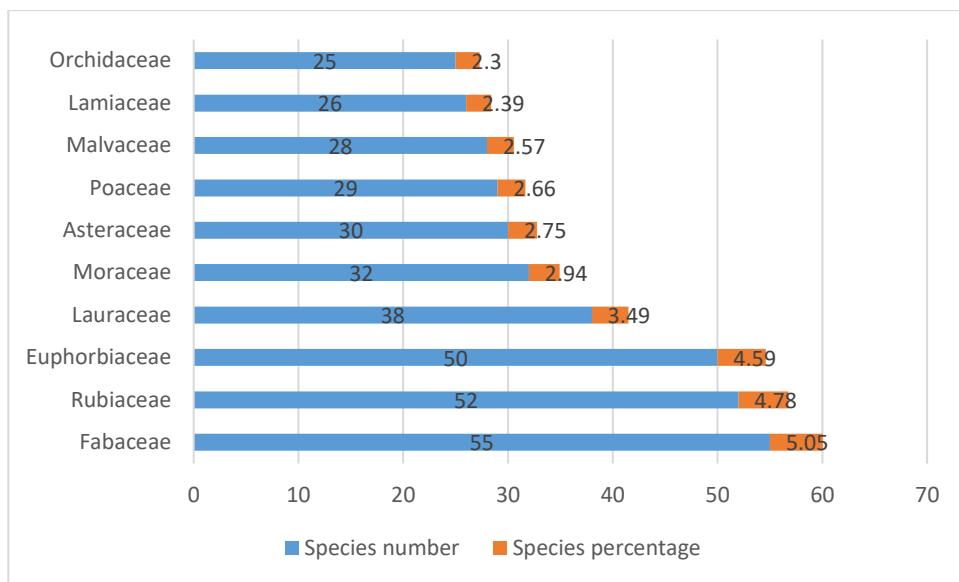

Figure 15. The most 10 species-richest families recorded in the Cham Chu NR

This 1089 recorded species represents 10.52% of the total number of 10350 Vietnamese vascular plant species, 26.95% of the total number of 2256 Vietnamese genera, and 52.13% of the total number of 305 Vietnamese families (Phan, 1998; Averyanov et al., 2003).

2.4.1.2. Bac Me Nature Reserve

Through two field surveys in July and December 2019, the flora of Bac Me NR has recognized about 1037 species of 576 genera of 140 families. Of which, there are 1023 angiosperms, ten gymnosperms, and four ferns (Annex 3). There are eight conifers, nine magnolias, and 39 orchids species distributed in the NR.

Ten families with the species richest compose a total of 375 species (36.16%). The highest species richness is Fabaceae with 55 species (5.3%), followed by Euphorbiaceae with 51 species (4.92%), Rubiaceae with 47 species (4.53%), Orchidaceae with 39 species (3.76%), Lauraceae with 37 species (3.57%), Moraceae with 32 species (3.09%), Poaceae and Asteraceae with equal 30 species (2.89% of each), Asteraceae with 30 species (2.89%), Malvaceae with 28 species (2.7), and Lamiaceae with 26 species (2.51%) ([Figure 16](#)[Figure 16](#)).

Fourteen genera with species richest compose a total of 111 species (10.74%). The most genera are Ficus with 21 species (2.03%), Litsea with 9 species (0.87%), Begonia and Bauhinia with equal 8 species (0.77% of each), five genera Dendrobium, Elastostema, Diospyros, Magnolia, and Dioscorea with equal 7 species (0.68% of each), five genera Polygonum, Hedyotis, Rubus, Syzygium, and Symplocos with equal 6 species (0.58% of each) ([Figure 17](#)[Figure 17](#)).

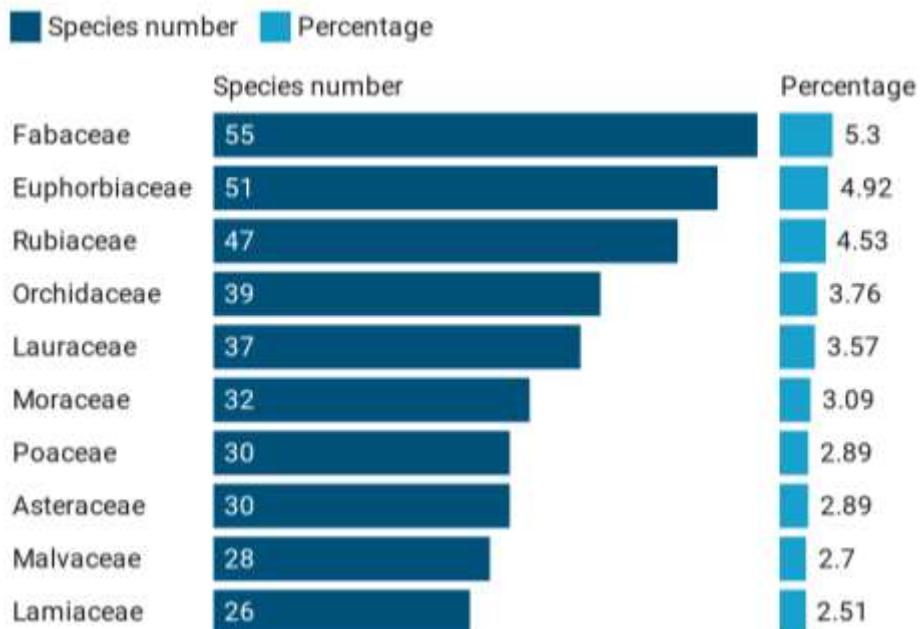

Figure 16. Ten families with species richest at Bac Me NR

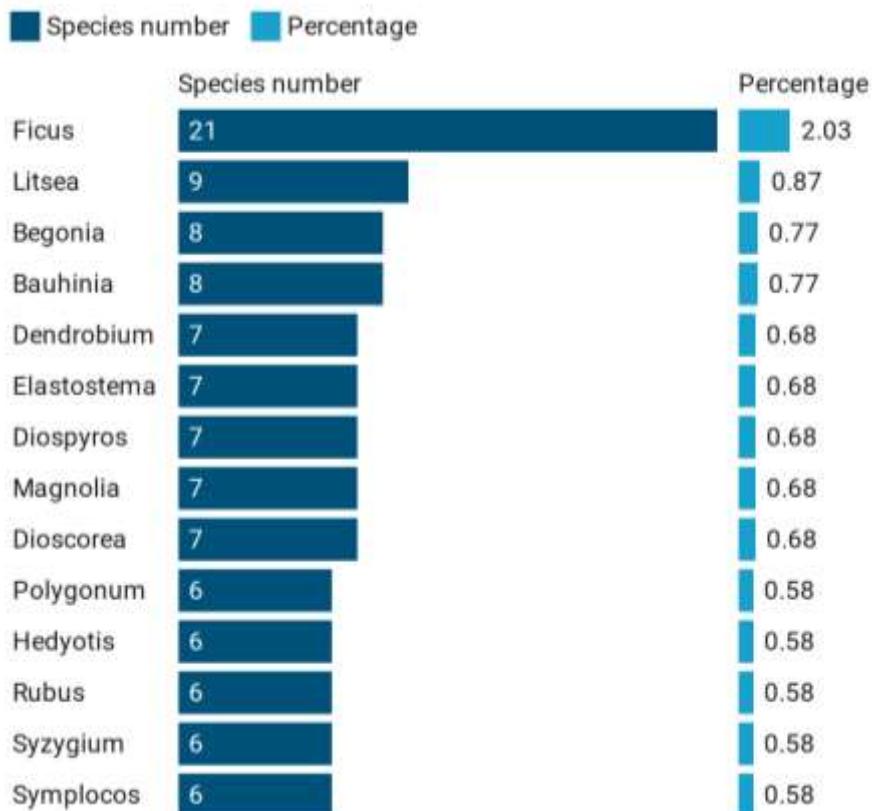

Figure 17. Fourteen genera with species richest at Bac Me NR

This 1037 recorded species represents 10.02% of the total number of 10350 vascular plant species in Vietnam; 576 genera represent 25.53% of the total number of 2256 genera in Vietnam; and 140 families represent 40% of the total number of 305 families in Vietnamese (Phan, 1998;

Averyanov el at., 2003). In the comparison with the whole flora of Ha Giang, the result shows 35.88% of the total number of 2890 vascular species, 51.57% of the total number of 1117 genera, and 73.88% of the total number of 190 families known to occur in Ha Giang province (Vu, 2014). According to a recent report by DARD Ha Giang (2016), our results are much higher in species, and genera numbers. This report has presented 165.65 % in the total of 626 previous recorded species, 148.45% in the total 388 genera, and 99.29% in the total 141 families ([Figure 18](#)[Figure 18](#)).

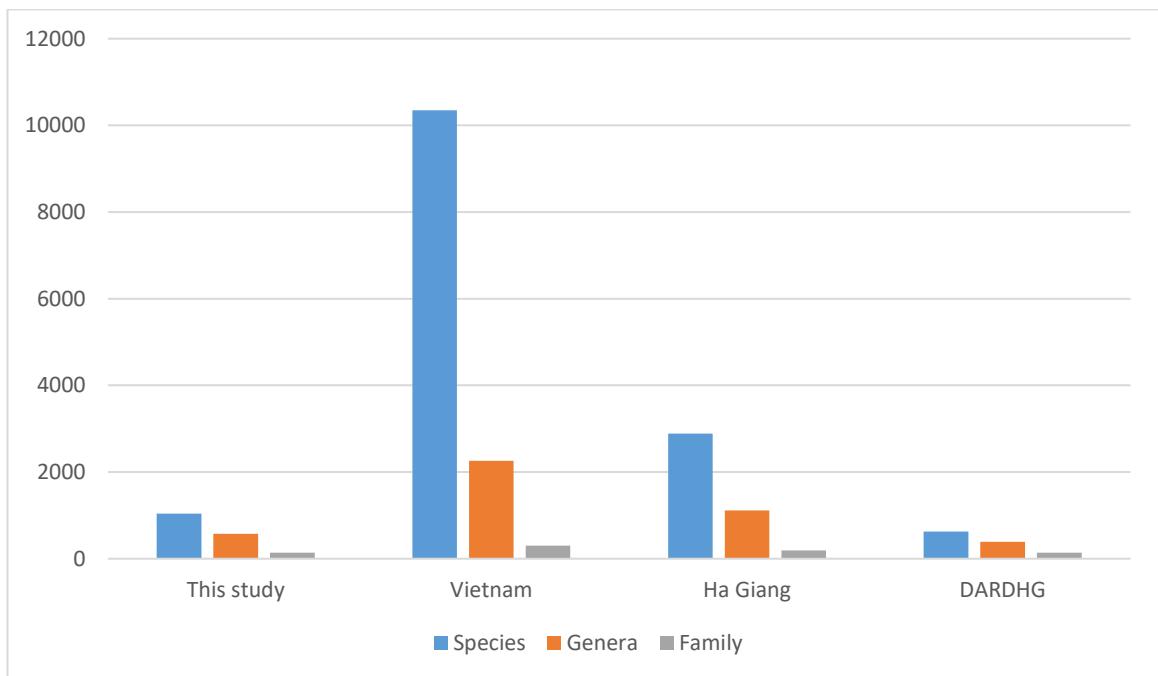

Figure 18. Number of recorded species, genera, and families of Bac Me NR relative to another reference

There were six conifer species recorded for the NR including *Cupressus vietnamensis*, *Calocedrus rupestris* (Cupressaceae), *Pinus fenzeliana* (Pinaceae), *Dacrycarpus imbricatus*, *Nageia fleuryi*, *Podocapus neriifolius* (Podocarpaceae). This result is higher than the report of Phan et al. (2007) which recorded only two species including *Dacrycarpus imbricatus*, and *Podocarpus neriifolius*. This report also presents a half number of the total Ha Giang conifer species (Farjon et al. 2002, Nguyen et al. 2007a).

In the 38 orchid species found in the NR, three Slipper Orchids including *Paphiopedilum helena*, *P. hirsutissimum*, *P. malipoense* were recorded. These species are always hunted by Orchid collectors. In addition, a new species, *Begonia bacmeensis* V.T.Pham & C.W.Lin (Pham et al. 2019), and a newly recorded species, *Hoya vangviengensis* Rodda & Simonsson were described from the limestone forest of Bac Me NR.

In the aspect of plant form diversity, the herbaceous species contribute a very high number of total species in the flora. As result, the herbaceous presents 32.5%, which high percentage that is typical in forest ecosystems (Whigham, 2004; Gilliam, 2007). The highest percentage of species are trees which contribute 37.51% of the total recorded species. Woody trees play a very important role in the movements and diet of wild animals (Nadler et al. 2003).

2.4.1.3. Phia Oac – Phia Den National Park

A total of 822 species belonging to 535 genera of 171 families were recorded in Phia Oac – Phia Den NP. Of which, there are 57 Polypodiophyta, one species of Pinophyta, one species of Gnetophyta, and 763 species of Magnoliophyta (Annex 3).

Ten species-richest families compose a total of 267 species (equal to 32.48%). The highest species richness family is Poaceae with 39 species (4.74%), followed by Euphorbiaceae with 34 species (4.14%), Rubiaceae with 32 species (3.89%), Rosaceae and Lauraceae with equal 29 species (3.53% of each), Lauraceae with 29 species (3.53%), Fabaceae with 27 species (3.28%), Asteraceae with 21 species (2.55%), Orchidaceae and Lamiaceae equal with 19 species (2.31% of each) and Moraceae with 18 species (2.19%) ([Figure 19](#)[Figure 19](#)).

Ten species-richest genera compose a total of 76 species (equal to 9.25%). The highest species richness genus *Ficus* with 11 species (equal to 1.34%), followed by *Symplocos* and *Rubus* with equal 10 species (1.22% of each), *Lithocarpus* with eight species (0.97%), *Hedyotis* with seven species (0.85%), five genera including *Cyperus*, *Magnolia*, *Prunus*, *Rhododendron*, and *Solanum* with equal six species (0.73% of each) ([Figure 20](#)[Figure 20](#)).

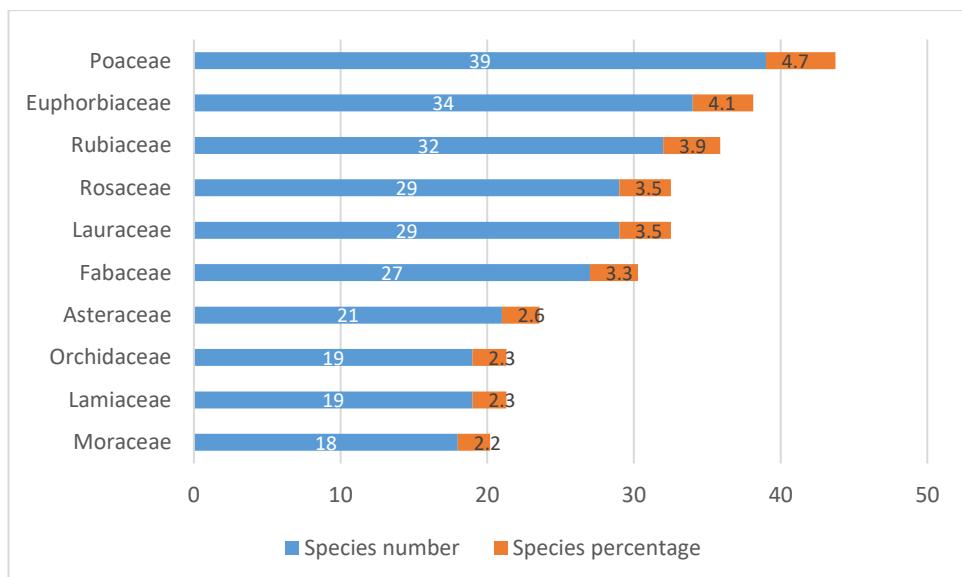

Figure 19. Ten species richest families in Phia Oac - Phia Den NP

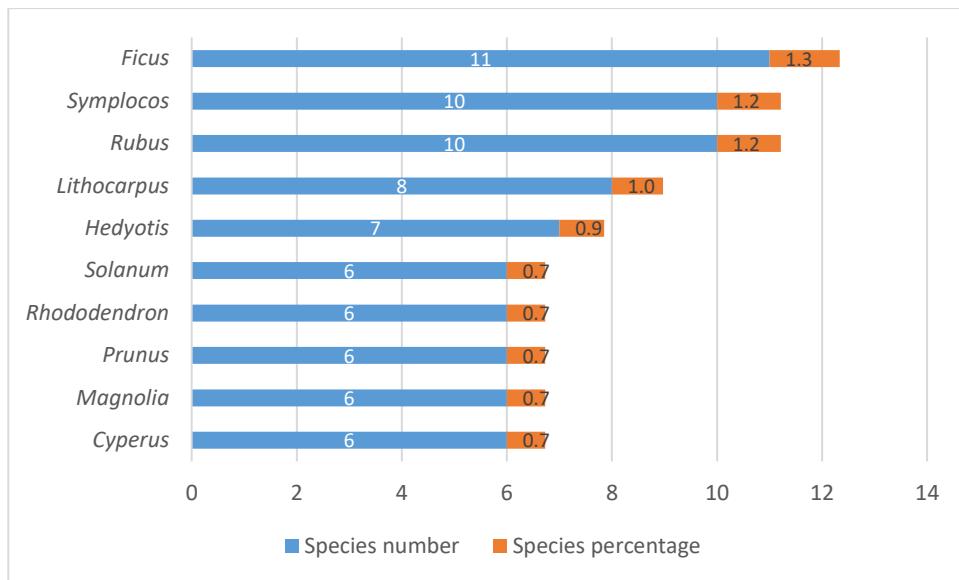

Figure 20. Ten species richest genera in Phia Oac - Phia Den NP

According to previous studies, total plant species were recorded in Phia Oac – Phia Den NP nearly 1200 species belonging to around 677 genera, and 177 to 199 families (Le *et al.* 2012, DARD Cao Bang 2015). This study is much smaller in species and genera number and is more or less similar in family number ([Figure 21](#)[Figure 21](#)). With a record of 822 species, 535 genera, and 171 families, the results represent 74.18% species, 78.91% genera, and 85.93% families when compare with the most recent report by DARD Cao Bang 2015.

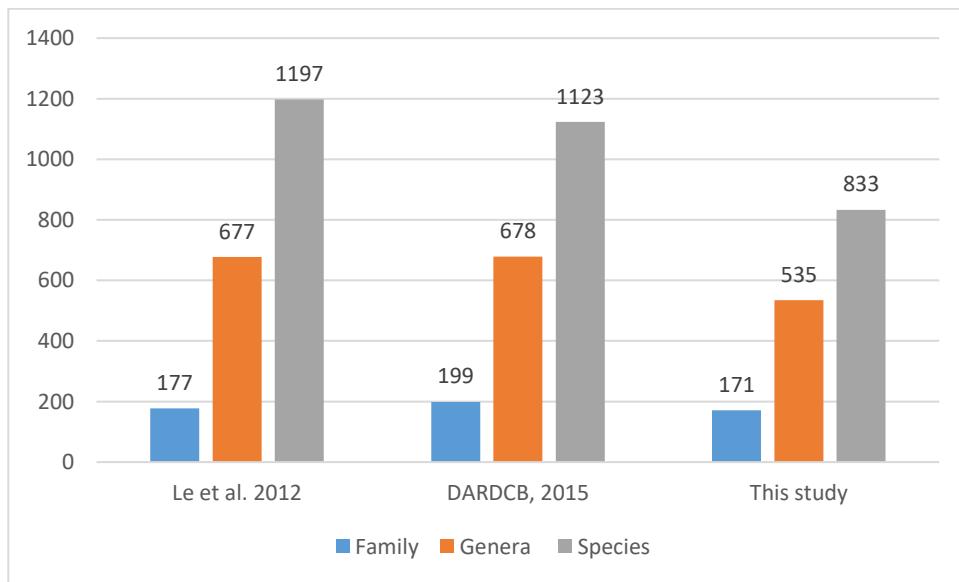

Figure 21. Number of recorded species, genera, and families of Phia Oac – Phia Den compared with previous studies

According to DARDCB 2015, there were five Gymnospermae families including Cycadaceae, Pinaceae, Podocarpaceae, and Taxaceae with 10 species, but this study only records one species of Podocarpaceae (*Podocarpus nerifolius*) and one species of Gnetaceae (*Gnetum montanum*). The field surveys also found eight species of Magnoliaceae, similar to previous

reports. The results of this study showed that 19 species of Orchidaceae were found, whereas DARDCB 2015 recorded 34 species. Some rare Orchid species were not found in the study area such as *Cymbidium giganteum*, *Dendrobium fimbriatum*, *D. crepidatum*, and *D. lindleyi*. These results may depend on our limited field survey study time or on some species that have disappeared in the National Park.

On the other hand, this study found two new record species for the flora of Vietnam, *Aristolochia austroyunnanensis* S.M.Hwang (Aristolochiaceae) and *Cynanchum officinale* (Hemsl.) Tsiang & H.T.Zhang (Apocynaceae) (Annex 5).

2.4.1.4. Nam Xuan Lac Species and Habitat Conservation Area

A total of 774 species belonging to 521 genera of 150 families were recorded in Nam Xuan Lac SHCA. Among them, there are one species of Psilotophyta, two species of Lycopodiophyta, 32 species of Polypodiophyta, five species of Gymnospermae, and 734 species of Magnoliophyta (Figures 22-24, Annex 3).

Ten species-richest families compose a total of 272 species (equal to 35.15%). The highest species richness family is Rubiaceae with 38 species (4.91%), followed by Euphorbiaceae with 35 species (4.52%), Fabaceae with 31 species (4.01%), Orchidaceae with 30 species (3.88%), Moraceae with 29 species (3.75%), Poaceae with 24 species (3.1%), Malvaceae with 23 species (2.97%), Asteraceae and Lauraceae equal with 22 species (2.84% of each) and Urticaceae with 18 species (2.33%) ([Figure 25](#)[Figure 25](#)).

Eight species-richest genera compose a total of 60 species (equal to 7.77%). The highest species richness genus is *Ficus* with 21 species (equal to 2.71%), followed by *Syzygium* with 8 species (1.03 %), *Schefflera* with 6 species (0.78 %), five genera including *Dendrobium*, *Dioscorea*, *Hedyotis*, *Litsea*, *Diospyros* with equal five species (0.65% of each) ([Figure 26](#)[Figure 26](#)).

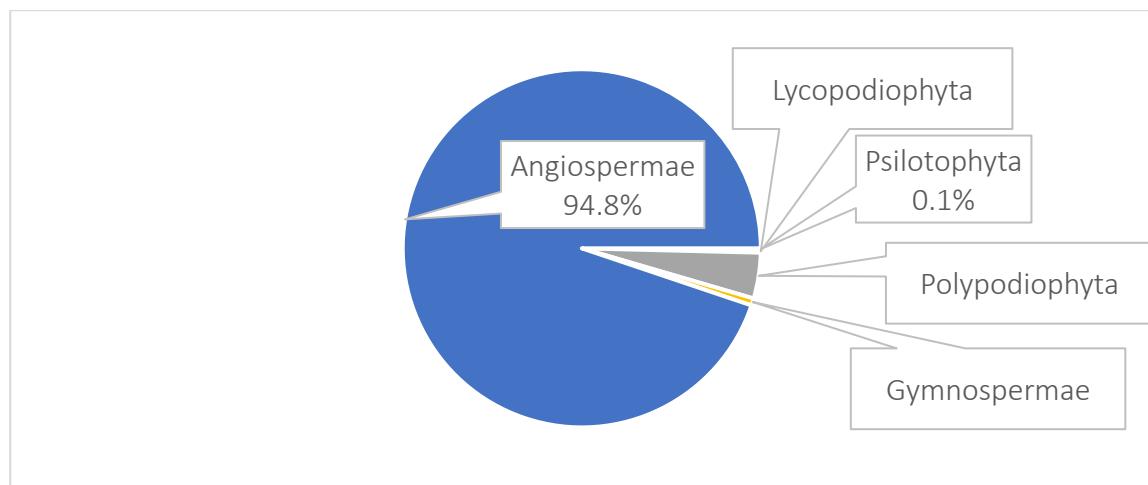

Figure 22. Species number by percentage among phylum

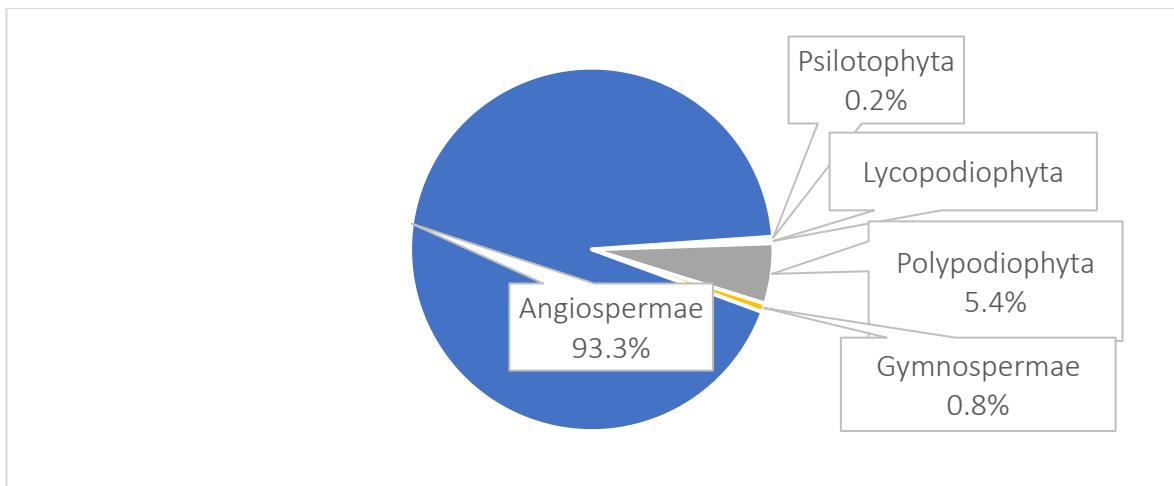

Figure 23. Genera number by percentage among phylum

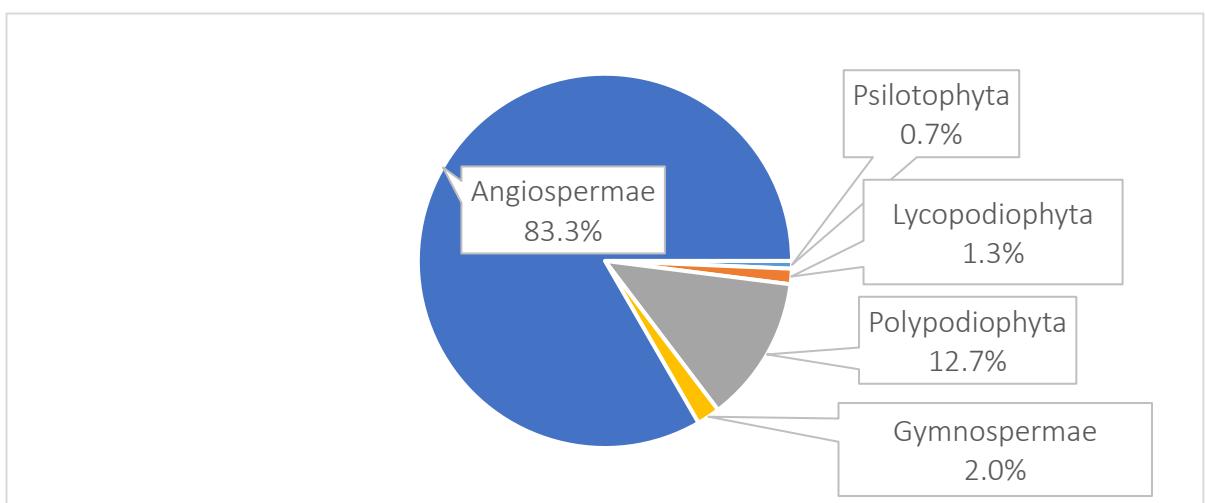

Figure 24. Families number by percentage among phylum

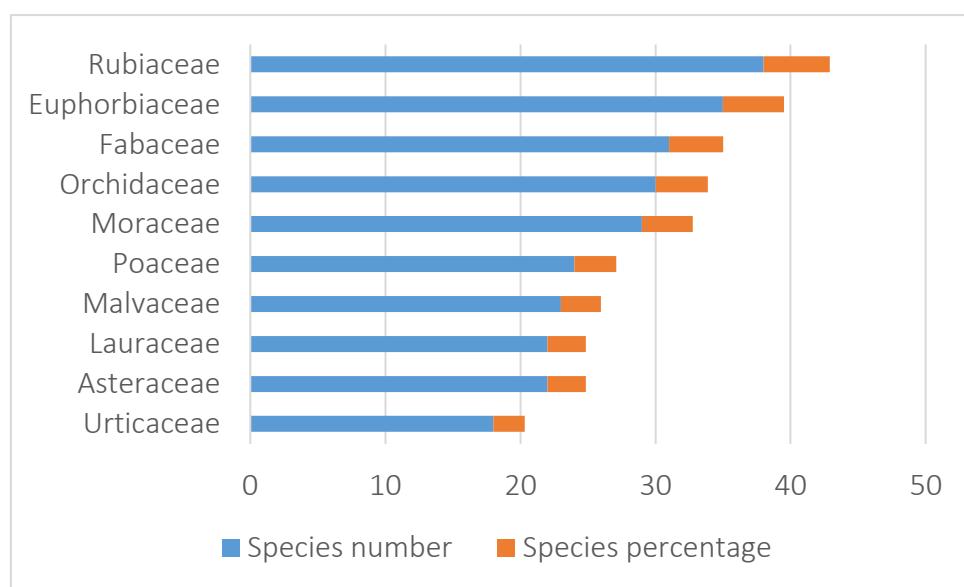

Figure 25. Ten species-richest families in Nam Xuan Lac SHCA

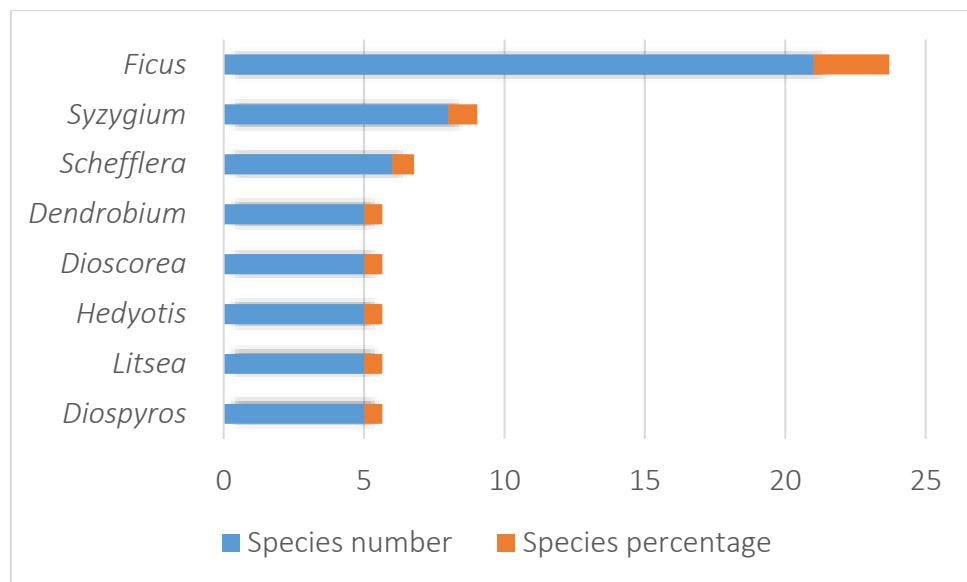

Figure 26. Eight species-richest genera in Nam Xuan Lac SHCA

According to previous studies, total plant species were recorded in Nam Xuan Lac SHCA about 512 species belonging to around 352 genera of 115 families (Nguyen *et al.* 2011). In this research, the number of species is higher with 774 species belonging to 521 genera of 150 families. The new recorded for the study area included about 262 species, 169 genera, and 35 families.

On the other hand, this research could not find some rare species such as *Cinnamomum balansae*, *Chukrasia tabularis*, *Fibraurea tinctoria*, *Paphiopedilum hirsutissimum* ([Table 5](#)[Table 5](#)). Some species may be extinct in the wild of the SHCA including *Pinus fenzeliana*, *Balanophora cucphuongensis*, *Panax stipuleanatus*, *Stephania dielsiana*, *Tinospora sagittata*, *Kadsura coccinea*, *Camellia hamyenensis* ([Table 5](#)[Table 5](#)).

Table 5. Some rare species could not find in Nam Xuan Lac SHCA

Araliaceae	<i>Panax stipuleanatus</i> Tsai & Feng
Balanophoraceae	<i>Balanophora cucphuongensis</i> N. T. Ban
Balanophoraceae	<i>Balanophora latisepala</i> (Tiegh.) Lecomte
Berberidaceae	<i>Mahonia nepalensis</i> DC.
Berberidaceae	<i>Podophyllum versipelle</i> Hance
Campanulaceae	<i>Codonopsis javanica</i> (Blume) Hook. f. & Thoms
Lauraceae	<i>Cinnamomum balansae</i> Lecomte
Meliaceae	<i>Chukrasia tabularis</i> A.Juss.
Menispermaceae	<i>Fibraurea tinctoria</i> Lour
Menispermaceae	<i>Stephania dielsiana</i> Y. C. Wu

Menispermaceae	<i>Tinospora sagittata</i> (Oliv.) Gagnep
Orchidaceae	<i>Paphiopedilum hirsutissimum</i> (Lindl.) Stein
Orchidaceae	<i>Paphiopedilum malipoense</i> S. C. Chen & Z. H. Tsi
Orchidaceae	<i>Paphiopedilum micranthum</i> T. Tang & F.T. Wang
Orchidaceae	<i>Anoectochilus calcareus</i> Aver
Pinaceae	<i>Pinus fenzeliana</i> Hand.-Mazz.
Schisandraceae	<i>Kadsura coccinea</i> (Lem.) A. C. Smith
Theaceae	<i>Camellia hamyenensis</i> M.Sealy

The total species number in Nam Xuan Lac SHCA found is the smallest when compared with Cham Chu NR, Bac Me NR, and Phia Oac – Phia Den NP. This happen could be this area is smallest in comparison with the other areas.

2.4.2. Life form diversity

Most species recorded are woody trees with 644 species, followed by herb with 523 species, shrub with 303 species, liana with 209 species, epiphyte (Epiph.) with 62 species, bambusoid (Bambu.) with 17 species, palm with 6 species, and aquatic with 2 species ([Figure 27](#)[Figure 27](#)).

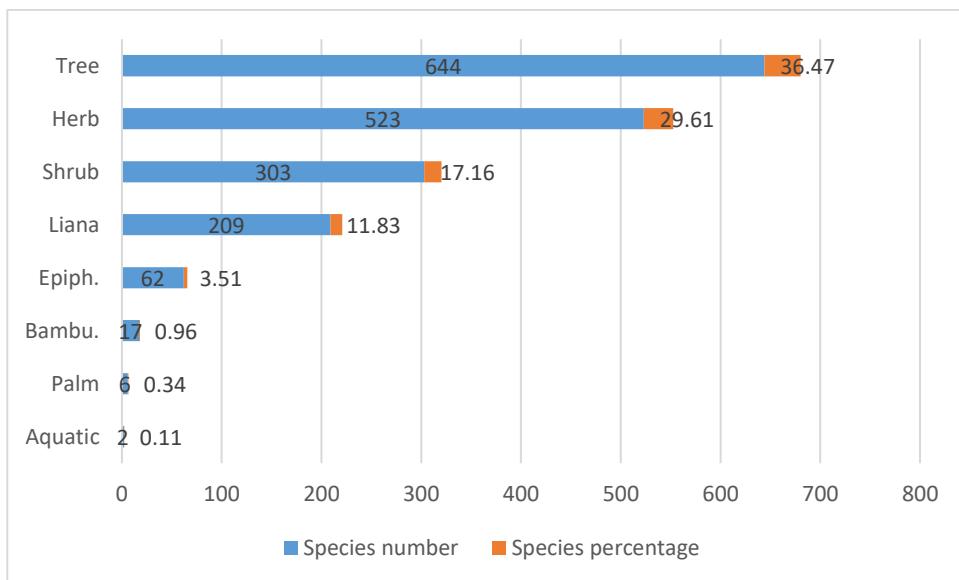

Figure 27. Life form diversity of plant species in study areas

2.4.2.1. Cham Chu Nature Reserve

The woody trees in the Cham Chu NR show the highest diversity 36% (394 species) of the total recorded species. The second-highest percentage of 32% (350 species) is herbaceous plants. To continue, shrubs with 18% (192 species), lianas with 11% (125 species), and epiphytes with 3% (28 species) ([Figure 28](#)[Figure 28](#), Annex 3). The woody trees and herbaceous plant species

recorded in the Cham Chu NR Forest show the highest diversity typical in forest ecosystems (Whigham, 2004; Gilliam, 2007).

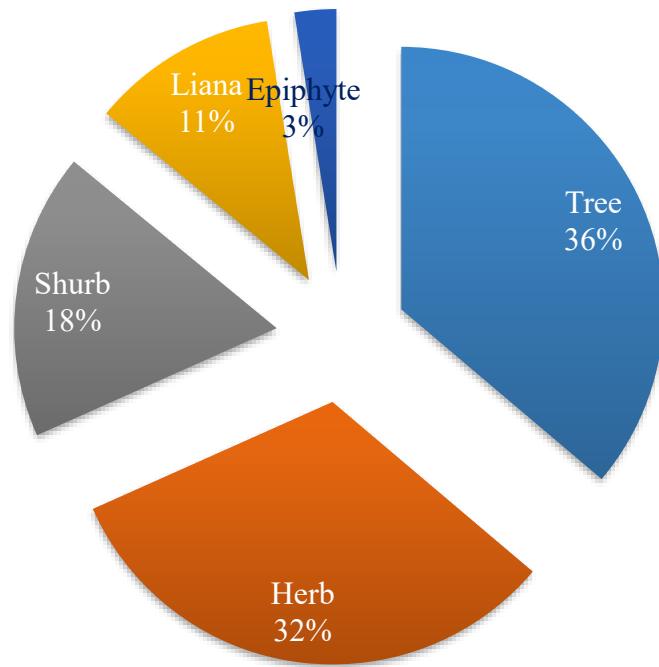

Figure 28. The relative proportion of growth habits of plant species in the Cham Chu NR

2.4.2.2. Bac Me Nature Reserve

Of the 1037 plant species recorded in the study area, there are two aquatics form species (0.19%), four palms form species (0.39), eight bambusoids form species (0.77%), 29 epiphytes form species (2.8%), 97 liana form species (9.35%), 167 shrubs form species (16.1%), 341 herbs form species (32.88%), and 389 trees form species (37.51%), ([Figure 29](#)[Figure 29](#)).

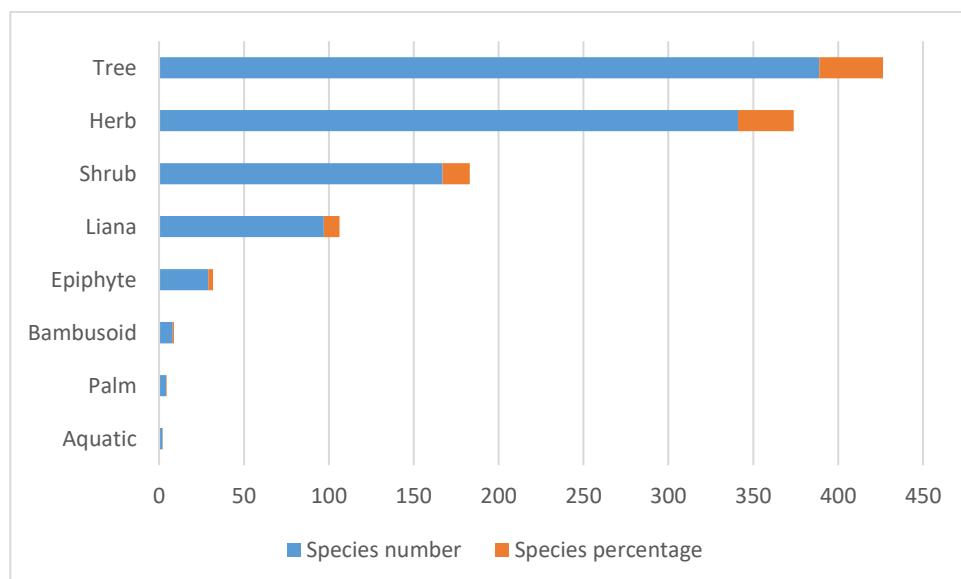

Figure 29. Plant form distribution of plant species in Bac Me NR

2.4.2.3. Phia Oac – Phia Den National Park

Of the 822 plant species recorded in the study area, there are eight life forms recorded. Of which, 295 species (equal to 35.89% of the total) were recorded as woody trees form, 245 species (equal to 29.81% of the total) were recorded as herb form, 142 species (equal to 17.28% of the total) were recorded as shrub form, 104 species (equal to 12.65% of the total) were recorded as liana form, 14 species (equal to 1.7% of the total) were recorded as bambusoid form, 14 species (equal to 1.7% of the total) were recorded as epiphyte form, seven species (equal to 0.85% of the total) were recorded as palm form, and one species (equal to 0.12% of the total) was recorded as aquatic form ([Figure 30](#)[Figure 30](#)).

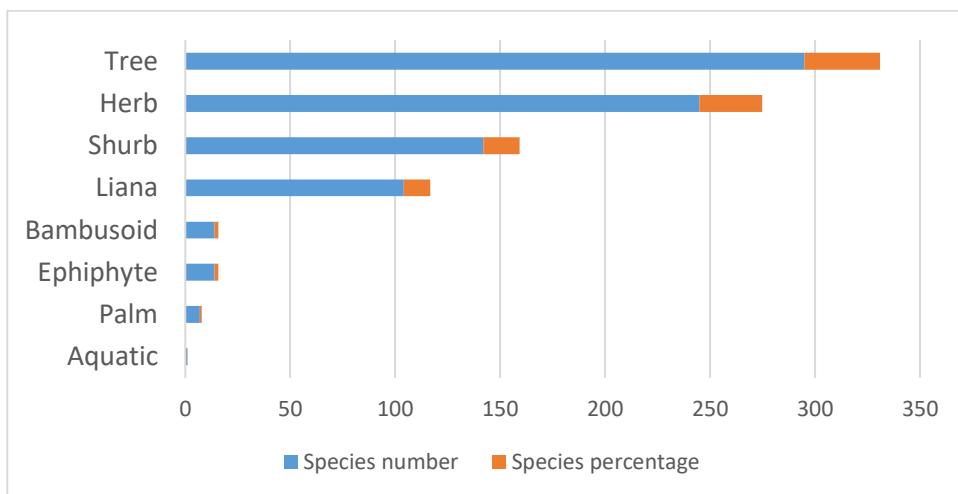

Figure 30. Life form diversity of plant species in Phia Oac - Phia Den NP

2.4.2.4. Nam Xuan Lac Species and Habitat Conservation Area

Of the 774 plant species recorded in the study area, there are eight plant habits recorded. Of which, 338 species (equal to 43.67% of the total) were recorded as Tree, 225 species (equal to 29.07% of the total) were recorded as Herb, 102 species (equal to 13.18% of the total) were recorded as shrub, 28 species (equal to 3.62% of the total) were recorded as Epiphyte, three species (equal to 0.39% of the total) were recorded as Aquatic, two species (equal to 0.26% of the total) were recorded as Palm and two species (equal to 0.26% of the total) were recorded as Bambusoid ([Figure 31](#)[Figure 34](#)).

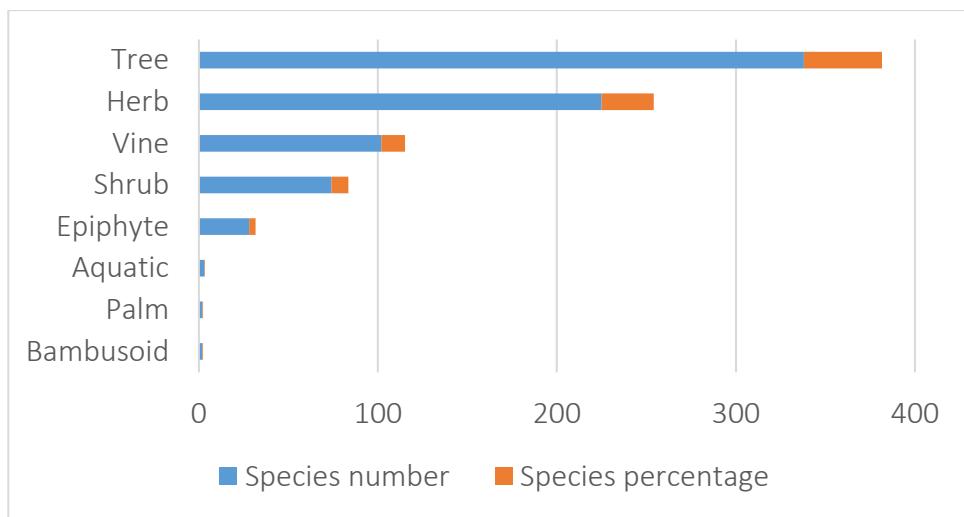

Figure 31. Plant form diversity in Nam Xuan Lac SHCA

Most of the plant species observed in the study area are woody trees and herbs with a total of 72.74%, followed by vine and shrub species. The most epiphyte recorded are ferns and orchids. The aquatic, palm, and bambusoid species were very few in the area, less than 1%. However, this record concentrates on the species numbers, not on individuals. As our observation, all most plants in the study area are shrubs, herbs, and vines.

2.4.3. Plant resources

In the four study areas, the total of species could be used as medicine plant are 753 species, followed by woody plants used for construction or furniture with 455 species, ornamental plants with 262 species, edible plants with 223 species, animal food plants with 92 species, bioactive plants with 50 species, fiber plants with 37 species and poisonous plant with 22 species ([Figure 32](#)[Figure 32](#)).

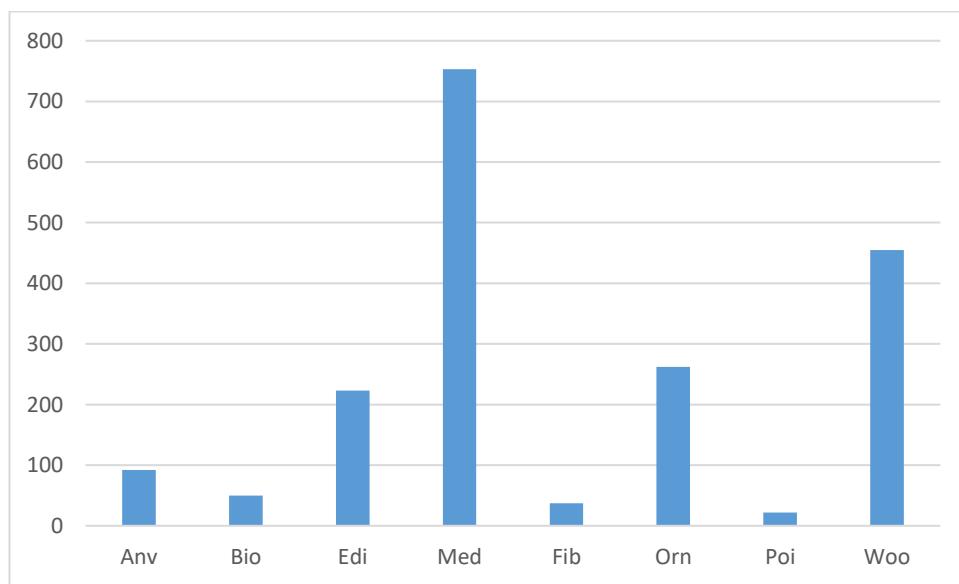

Figure 32. Plant resource diversity in four study areas

Anvi – Animal foods, Bio – Bioactive plants, Edi – Edible plants, Med – Medicine plants, Fib – Fiber plants, Orn – Ornamental plants, Poi – Poisonous plants, Woo – Woody plants used for construction, furniture.

2.4.3.1. Cham Chu Nature Reserve

In the Cham Chu NR, the total of species could be used as medicine plant are 529 species, followed by woody plants used for construction or furniture with 186 species, ornamental plants with 164 species, edible plants with 147 species, animal food plants with 51 species, bioactive plants with 37 species, fiber plants with 22 species and poisonous plant with 11 species ([Figure 33](#)[Figure 33](#))

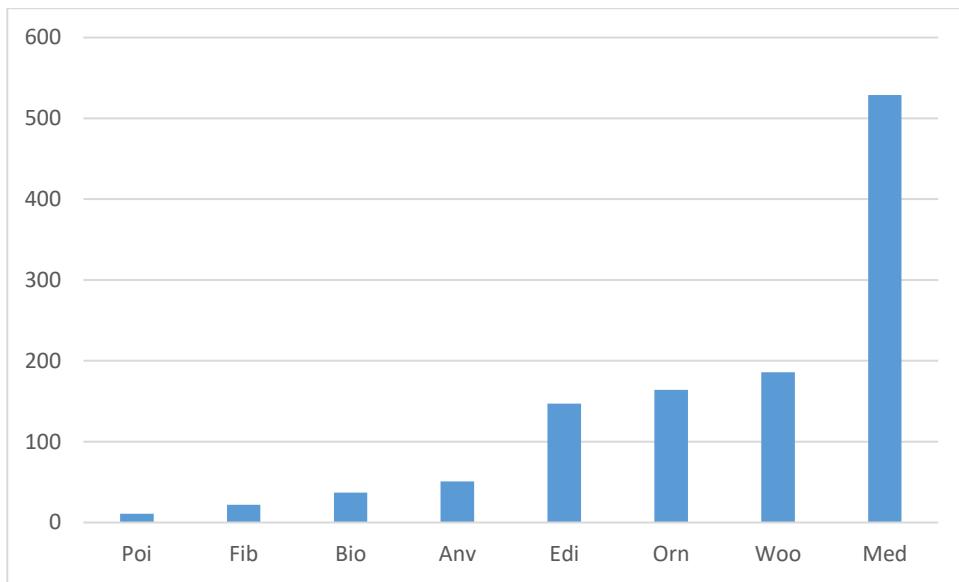

Figure 33. Plant resource diversity in the Cham Chu NR

2.4.3.2. Bac Me Nature Reserve

In the four study areas, the total of species could be used as medicine plant are 494 species, followed by woody plants used for construction or furniture with 271 species, ornamental plants with 147 species, edible plants with 139 species, animal food plants with 48 species, bioactive plants with 35 species, fiber plants with 22 species and poisonous plant with 12 species ([Figure 34](#)[Figure 34](#))

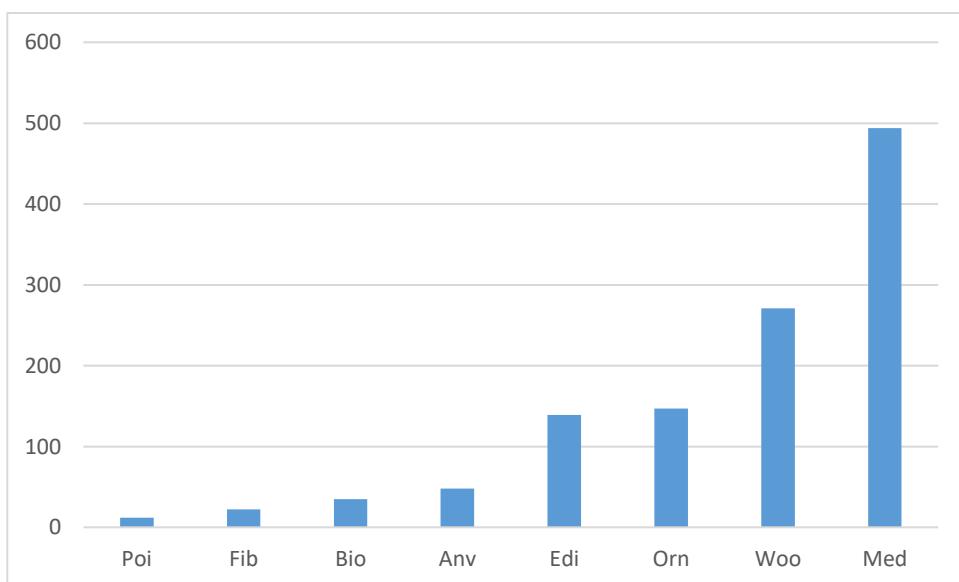

Figure 34. Plant resource diversity in the Bac Me NR

2.4.3.3. Phia Oac – Phia Den National Park

The results show that most plants are used for medicinal (40.75%), followed by construction wood (29.08%), vegetable (11.80%), ornamental (10.95%), animal food (6.45%), edible fruit (5.11%), and fiber (1.95%). Some species were recorded as biological activity (2.8%) and poisonous plants (1.85%) ([Figure 35](#)[Figure 35](#)).

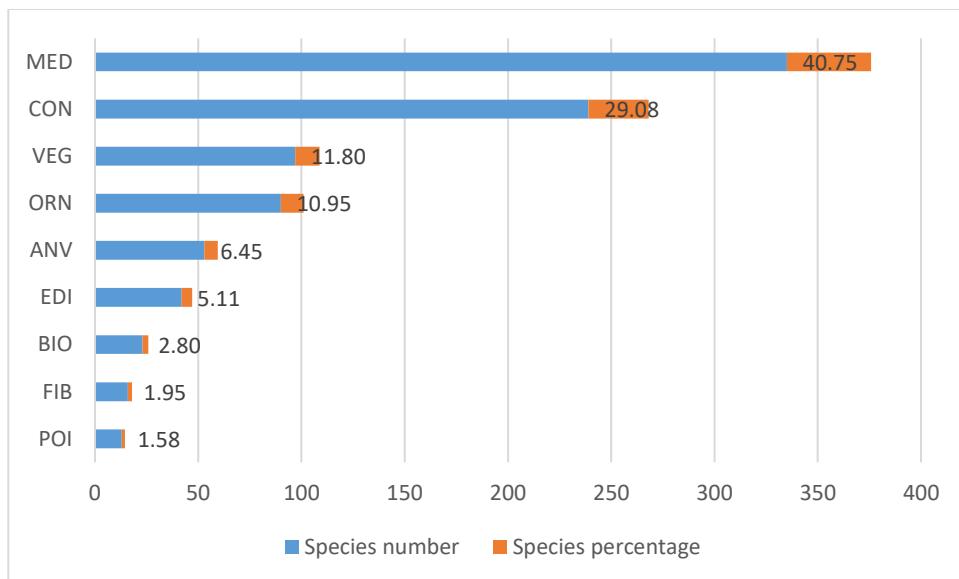

Figure 35. Plant resource diversity in the Phia Oac - Phia Den NP

ANV – Animal vegetable, BIO – Biological activity plant, CON – Construction wood, EDI – Edible fruit, FIB – Fiber plant, MED – Medicine plant, ORN – Ornamental plant, POI – Poisonous plant, VEG – Vegetable.

As the result, up to 40.75% of recorded plant species are used as medicinal plants in the study area. It is a similar ratio recorded by NIMM (2016) for the whole country of Vietnam. Traditional medicine in Vietnam has a long history and plays an important role in many disease prevention and treatment (Nguyen 2007; Vo 2012a, b; Do 2004; Do et al. 2006a, b; MoH 2017a, b). On the other hand, 29.08% of tree species that could be used for construction, making furniture, or making houses, play an important role for local people. Since many local people live based on forests, these plants are significant for their livelihood.

2.4.3.4. Nam Xuan Lac Species and Habitat Conservation Area

The results show that most plants are used for medicinal (447 species, equal to 57.75%), followed by construction wood (201 species, 25.97%), ornamental plant (119 species, 15.37%), vegetable (79 species, 6.46%), animal food (33 species, 4.26%), edible fruit (22 species, 2.84%), and fiber plant (17 species, 2.2%). Some species were recorded as biological activity (33 species, 4.26%) and poisonous plants (6 species, 0.78%) ([Figure 36](#)[Figure 36](#)).

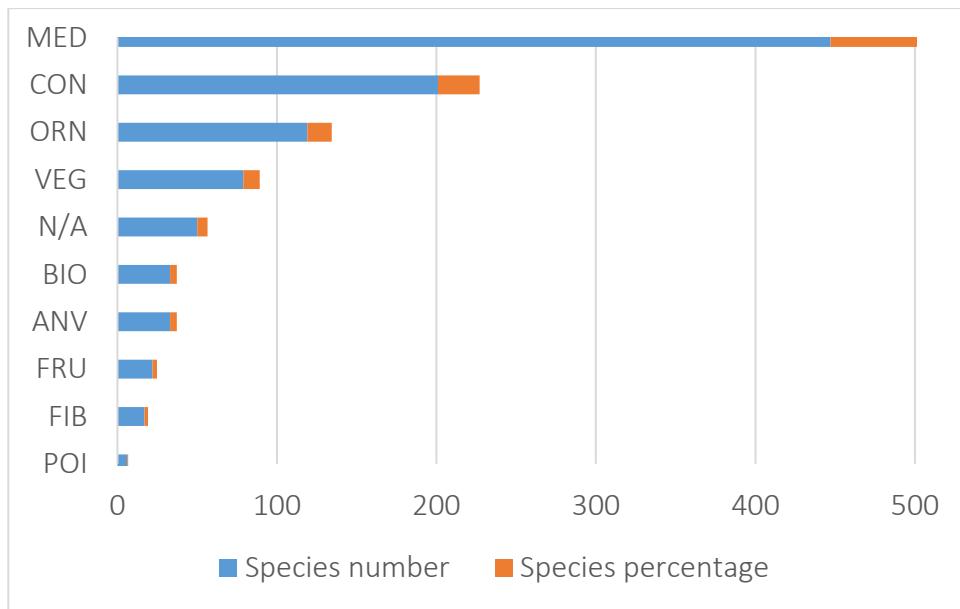

Figure 36. The plant resource diversity in the Nam Xuan Lac SHCA

ANV – Animal vegetable, BIO - Biological activity plant, CON – Construction wood, FIB – Fiber plant, FRU – Edible fruit, MED – Medicine plant, ORN – Ornametal plant, POI – Poisonous plant, VEG – Vegetable.

Most plants recorded in the study area could be used by local people. More than half of them (57.75%) could be used as traditional medicine. This result is more or less similar to the publication of Nguyen (2014), which study recorded 458 medicine plant species. The second highest group belongs to trees for construction, which contained about 201 species. Since most trees in the limestone mountain-grown very slow because of hard conditions. The timber of these trees is very hard and good for construction.

2.4.4. Species distribution along gradient elevation by plot study

A total of 7,891 individuals belonging to 608 plant species were obtained in 54 plots ([Figure 37](#)). These species were found distributed within 133 families and 365 genera. Among them, 351 species belonging to 232 genera of 95 families were recorded in Bac Me NR, 258 species belonging to 196 genera of 91 families were recorded in Cham Chu NR, 208 species belonging to 159 genera of 94 families were recorded in Phia Oac-Phia Den NP, and 171 species belonging to 159 genera of 78 families were recorded in Nam Xuan Lac SHCA. The Bac Me NR in Ha Giang Province is the richest family in terms of the number of species and genera.

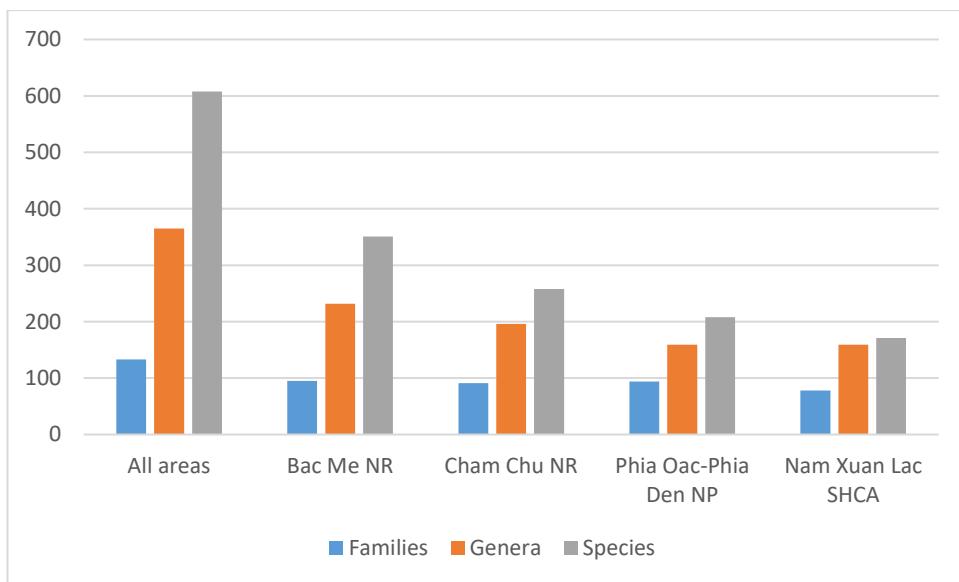

Figure 37. The families, genera, and species found in four study areas by plot study

Most species were found at around 1000 m a.s.l., the species reduced when elevation higher ([Figure 38](#)[Figure 38](#)). The plant species composition in Nam Xuan Lac SHCA is most similar to that of Bac Me NR and Cham Chu NR. The species composition in Phia Oac – Phia Den NP is sometimes similar to that of Nam Xuan Lac SHCA and Cham Chu NR ([Figure 39](#)[Figure 39](#)).

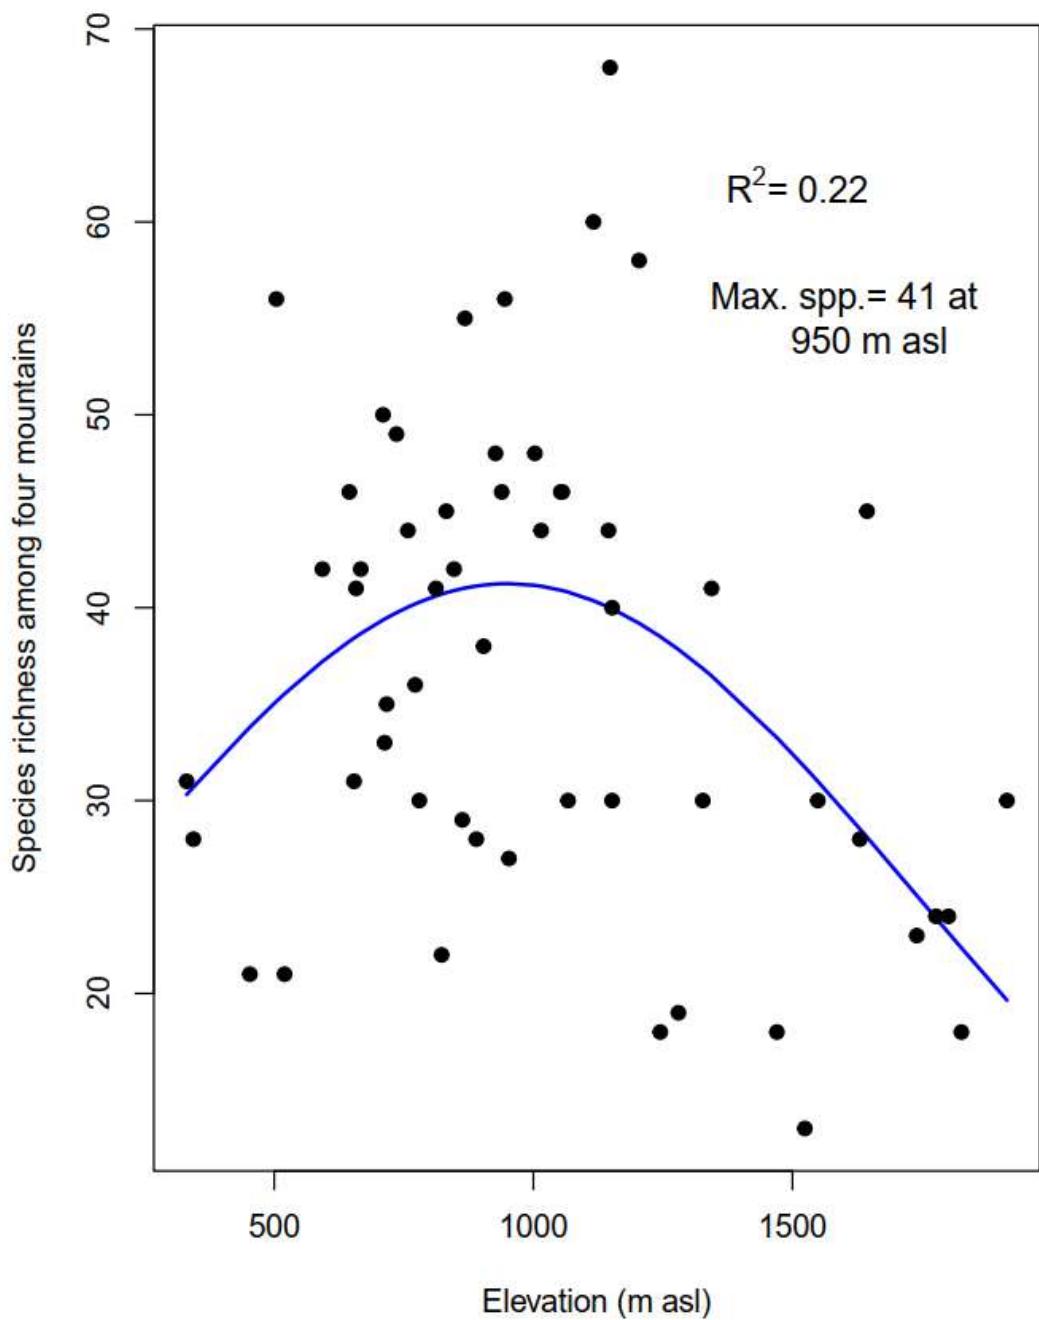

Figure 38. Relationship between elevation and species richness. The fitted line is the significant line after generalized.

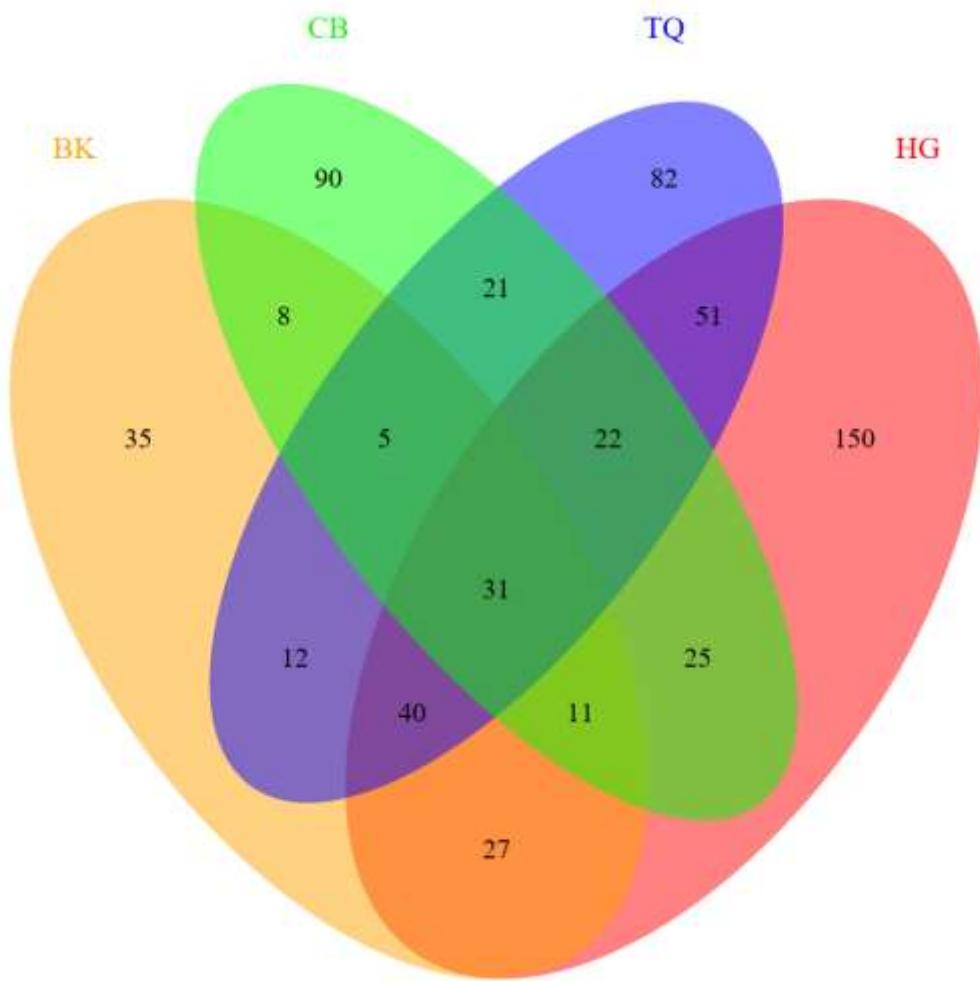

Figure 39. Venn diagram of plant species occurred among four mountains. (BK = Nam Xuan Lac NR, CB = Phia Oac – Phia Den NP, HG = Bac Me NR, TQ = Cham Chu NR)

2.4.4.1. Cham Chu Nature Reserve

According to the plot survey result, the dominant species at different altitudes in Cham Chu NR are given in [Table 6](#).

Table 6. The floristic composition of Cham Chu NR at different altitudes

Altitude range (m)	Forest type	Dominant/ common floral element
600-700	Limestone mountain	<i>Aglaonema simplex</i> Blume, <i>Burretiodendron hsienmu</i> W.Y.Chun & F.C.How, <i>Cleidion spiciflorum</i> Merr, <i>Croton tiglum</i> L., <i>Diospyros buxifolia</i> (Blume) Hiern, <i>Gomphandra mollis</i> Merr., <i>Machilus thunbergii</i> Sieb. & Zucc, <i>Myxopyrum nervosum</i> Blume, <i>Neonauclea purpurea</i> Merr., <i>Nephelium cuspidatum</i> Blume var. <i>bassacense</i> (Pierre) Leenh, <i>Pandanus humilis</i> Lour, <i>Polyalthia lauui</i> Merr., <i>Polyalthia parviflora</i> Ridl., <i>Rhaphidophora chevalieri</i> Gagnep, <i>Salacia chinensis</i> L., <i>Sinosideroxylon bonii</i> Aubr, <i>Sterculia lanceolata</i> Cav.

2.4.4.2. Bac Me Nature Reserve

According to the plot survey result, the dominant species at different altitudes in Bac Me NR are given in [Table 7](#)[Table 7](#).

Table 7. The floristic composition of Bac Me NR at different altitudes

Altitude range (m)	Forest type	Dominant/ common floral element
300-400	Limestone in slope	Tree: <i>Burretiodendron hsienmu</i> , <i>Sterculia nobilis</i> , <i>Glycosmis cymose</i> , <i>Meliosma fordii</i> , <i>Streblus ilicifolius</i> . Shrub: <i>Cleistanthus sumatratus</i> , <i>C. tonkinensis</i> , <i>Dracaena angustifolia</i> , <i>Glycosmis cymose</i> , <i>Walsura cochinchinensis</i> . Vine: <i>Bauhinia scandens</i> , <i>Cryptolepis sinensis</i> . Herb: <i>Calanthe herbacea</i> , <i>Carex thomsonii</i> , <i>Liparis petiolate</i> , <i>Peliosanthes teta</i> . Regeneration: <i>Alphonsea philastreana</i> , <i>Celtis tetrandra</i> , <i>Cleidion spiciflorum</i> , <i>C. spiciflorum</i> , <i>Diospyros mollis</i> , <i>Excoecaria cochinchinensis</i> , <i>Garcinia fragraeoides</i> , <i>Gironniera subaequalis</i> , <i>Gironniera subaequalis</i> , <i>Miliusa balansae</i> , <i>Salacia chinensis</i> , <i>Sterculia nobilis</i> , <i>Streblus ilicifolius</i> , <i>Strychnos axillaris</i> .
500-600	Limestone in valey	Tree: <i>Aidia oxydonta</i> , <i>Burretiodendron hsienmu</i> , <i>Canarium bengalense</i> , <i>Celtis philippensis</i> , <i>Diospyros brandisiana</i> , <i>Drimycarpus racemosus</i> , <i>Ficus hispida</i> var. <i>badiostrigosa</i> , <i>Linociera</i> sp., <i>Machilus oreophila</i> , <i>Pometia pinnata</i> , <i>Radermachera ignea</i> , <i>Sloanea sinensis</i> , <i>Toona surenii</i> . Shurb: <i>Antidesma ghaesembilla</i> , <i>Carallia brachiate</i> , <i>Caryota mitis</i> , <i>Costus specionsus</i> , <i>Dracaena elliptica</i> ,

Gomphandra quadrifida, Impatiens morsei, Leea bracteata, Psychotria silvestris, Phyllagathis cavaleriei. Vine: *Acacia tonkinensis, Artobotrys hexapetalus, Calamus tetradactylus, Dioscorea hispida, Erythropalum scandens, Illigera celebica, Gnetum montanum, Lysionotus pauciflorus, Pothos chinensis, Tetrastigma henryi.* Herb: *Amorphophallus tonkinensis, Arisaema balansae, Calanthe triplicata, Elastostema lineolate, Gymnopetalum integrifolium, Ophiopogon latifolius, Piper bonii, P. pendulispicum, Tacca chantrieri.* Regeneration: *Aglaia spectabilis, Alseodaphne tonkinensis, Archidendron robinsonii, Canarium bengalense, Caryodaphnopsis poilanei, Celtis philippensis, Drimycarpus racemosus, Ficus hispida var. badiostrigosa, Garcinia gracilis, Gomphandra mollis, Litsea umbellata, Lithocarpus balansae, L. fenestratus, Machilus oreophila, Miliusa balansae, Polyalthia parviflora, Pometia pinnata, Pterospermum argenteum, Rothmannia eucodon, Syzygium levinei, Trevesia palmata.*

600-700	Limestone slope	in	Tree: <i>Dysoxylum binectariferum, Linociera sp., Pterospermum heterophyllum, Rothmannia eucodon, Sapium sebiferum, Spondias lakonensis.</i> Shurb: <i>Bridelia pierrei, Costus speciosus, racaena angustifolia, Justicia glomerulata, Ornithoboea parishii, Psychotria montana.</i> Vine: <i>Acacia coccinea, Artobotrys hexapetalus, Erythropalum scandens, Gnetum montanum, Pothos chinensis, Salacia chinensis, Smilax ferox, Strychnos axillaris, Tetrastigma beauvai.</i> Herb: <i>Acanthephippium gougaense, Aglaonema modestum, Begonia bacmeensis, Liparis sp., Ophiopogon reptans, Pilea hookeriana.</i> Regeneration: <i>Aglaia duperreana, A. odorata, Dimocarpus fumatus, Diospyros susarticulata, Drimycarpus racemosus, Dysoxylum binectariferum, Firmiana colorata, Garcinia fagraeoides, G. oblongifolia, Linociera sp., Miliusa balansae, Polyalthia thorelli, Rothmannia eucodon, Sinosideroxylon bonii, Trevesia palmata.</i>
700-800	Limestone slope	in	Tree: <i>Bridelia pierrei, Burretiodendron hsienmu, Dimocarpus fumatus, Dysoxylum binectariferum, Garcinia fagraeoides, Garcinia gracilis, Gironniera subaequalis, Machilus thunbergia, Nephelium cuspidatum var. bassacense, Sapium sebiferum.</i> Shurb: <i>Didymocarpus bonii,</i>

Dracaena angustifolia, *Glyptopetalum harmandianum*, *Justicia glomerulata*, *Maclura cochinchinensis*, *Mycetia balansae*, *Pittosporum tetraspermum*, *Psychotria montana*. Vine: *Artobotrys hexapetalus*, *Bauhinia coccinea*, *Clematis buchaniana*, *Derris balansae*, *Hoya tamdaoensis*, *Hoya vangviengiensis*, *Mussaenda glabra*, *Pothos chinensis*, *Salacia chinensis*, *Smilax aspericaulis*, *Strychnos axillaris*, *Tetrastigma beauvaisei*, *T. henryi*, *T. petelotii*. Herb: *Amorphophallus coaetaneus*, *Begonia bacmeensis*, *Elastostema balansae*, *Elastostema lineolate*, *Pholidota longipes*, *Pilea hookeriana*, *Piper bonii*. Regeneration: *Aglaia elaeagnoidea*, *Aidia cochinchinensis*, *A. oxydonta*, *Burretiodendron hsienmu*, *Celtis tetrandra*, *Dimocarpus fumatus*, *Diospyros susarticulata*, *Ficus hispida* var. *badiostrigosa*, *Garcinia fagraeoides*, *G. gracilis*, *Gironniera subaequalis*, *Linociera sp.*, *Machilus thunbergii*, *Rothmannia eucodon*, *Streblus tonkinensis*.

800-900	Limestone slope	in Tree: <i>Aglaia elaeagnoidea</i> , <i>Deutzianthus tonkinensis</i> , <i>Diospyros mollis</i> , <i>Garcinia gracilis</i> , <i>Machilus oreophila</i> , <i>Mitrephora calcarea</i> , <i>Pterospermum truncatolobatum</i> , <i>Sterculia lanceolata</i> . Shurb: <i>Antidesma montanum</i> , <i>Bridelia pierrei</i> , <i>Euonymus forbesianus</i> , <i>Flacourtie indica</i> , <i>Glochidion rubrum</i> , <i>Myrioneuron effusum</i> , <i>Myrioneuron tonkinense</i> , <i>Pittosporum tetraspermum</i> , <i>Pittosporum tetraspermum</i> , <i>Psychotria silvestris</i> , <i>Sauropolis assimilis</i> . Vine: <i>Aeschynanthus acimunatus</i> , <i>Bauhinia championii</i> , <i>Calamus palustris</i> , <i>Clematis granulate</i> , <i>Gnetum montanum</i> , <i>Lysionotus pauciflorus</i> , <i>Strychnos axillaris</i> , <i>Tetrastigma planicaule</i> , <i>Uvaria petelotii</i> . Herb: <i>Amorphophallus tonkinesnis</i> , <i>Arisaema balansae</i> , <i>Begonia bacmeensis</i> , <i>B. caobangensis</i> , <i>Elastostema baviensis</i> , <i>Justicia glomerulata</i> , <i>Pilea peploides</i> , <i>Piper bonii</i> . Regeneration: <i>Burretiodendron hsienmu</i> , <i>Aglaia odorata</i> , <i>Ardisia arborescens</i> , <i>Celtis philippensis</i> , <i>Cinnamomum bejolghota</i> , <i>Clausena dunniana</i> , <i>Dimocarpus fumatus</i> , <i>Diospyros mollis</i> , <i>Dysoxylum binectariferum</i> , <i>Ficus hispida</i> var. <i>badiostrigosa</i> , <i>Ficus obscura</i> , <i>Firmiana colorata</i> , <i>Garcinia gracilis</i> , <i>Machilus oreophila</i> , <i>M. thunbergia</i> , <i>Polyalthia thorellii</i> , <i>Pometia pinnata</i> , <i>Pterospermum truncatolobatum</i> , <i>Schefflera heptaphylla</i> , <i>Sterculia parviflora</i> , <i>Trevesia palmata</i> .
---------	-----------------	--

900-1000	Limestone slope	in Tree: <i>Aidia oxydonta</i> , <i>Artocarpus lakoocha</i> , <i>Dimocarpus fumatus</i> , <i>Diospyros susarticulata</i> . Shurb: <i>Cayratia geniculate</i> , <i>Clerodendrum gaudichaudii</i> , <i>Didymocarpus bonii</i> , <i>Euonymus forbesianus</i> , <i>Flacourtie indica</i> , <i>Justicia glomerulata</i> , <i>Myrioneuron tonkinense</i> , <i>Piper pendulispicum</i> , <i>Psychotria silvestris</i> , <i>Rothmannia eucodon</i> . Vine: <i>Abrus precatorius</i> , <i>Aeschynanthus acuminatus</i> , <i>Bauhinia coccinea</i> , <i>Bauhinia ornata</i> var. <i>balansae</i> , <i>Clematis buchaniana</i> , <i>Derris balansae</i> , <i>Pothos repens</i> , <i>Salacia chinensis</i> , <i>Smilax ferox</i> , <i>Strychnos axillaris</i> , <i>Tetragastigma petelotii</i> . Herb: <i>Begonia caobangensis</i> , Ferns. Regeneration: <i>Aglaia elaeagnoidea</i> , <i>Aidia cochinchinensis</i> , <i>Aidia oxydonta</i> , <i>Alpinia conchigera</i> , <i>Ardisia arborescens</i> , <i>Beilschmiedia percoriacea</i> , <i>Clausena dunniana</i> , <i>Diospyros susarticulata</i> , <i>Drimycarpus racemosus</i> , <i>Dysoxylum binectariferum</i> , <i>Garcinia gracilis</i> , <i>Gomphandra quadrifida</i> , <i>Meliosma fordii</i> , <i>Polyalthia thorelii</i> , <i>Sloanea tomentosa</i> , <i>Trevesia palmata</i> .
----------	-----------------	---

In the limestone forest of Bac Me NR, the common tree species could be found from 300 to 900m including *Burretiodendron hsienmu*. Some tree species such as *Sterculia nobilis*, *Glycosmis cymose*, *Meliosma fordii*, *Streblus ilicifolius* only distribute in low elevations (300-400m). The tree species *Artocarpus lakoocha* is only distributed at high elevations (900-1000m). The tree species *Dimocarpus fumatus*, *Garcinia gracilis*, *Diospyros susarticulata* were found at 500 to 1000m altitudes.

2.4.4.3. Phia Oac – Phia Den National Park

According to the 16 plots of survey results, the dominant species at different altitudes in Phia Oac - Phia Den are given in **Table 8**.

Table 8. The floristic composition in Phia Oac - Phia Den at different altitudes

Altitude range (m)	Forest type	Dominant/ common floral element
1100-	Broad-leaved	<i>Alpinia globosa</i> , <i>Ardisia crenata</i> , <i>Asplenium nidus</i> , <i>Carallia lanceiefolia</i> , <i>Asplenium nidus</i> , <i>Carallia lanceiefolia</i> ,
1200	evergreen forest	<i>Choerospondias axillaris</i> , <i>Diospyros morrisiana</i> , <i>Engelhardtia spicata</i> , <i>Euodia lepta</i> , <i>Eurya acuminate</i> , <i>E. laotica</i> , <i>Glochidion eriocarpum</i> , <i>Helicia cochinchinensis</i> , <i>Lasianthus eberhardii</i> , <i>Lindera balansae</i> , <i>Machilus odoratissima</i> , <i>Piper pendulispicum</i> , <i>Pyrus pashia</i> , <i>Quercus myrsinifolia</i> , <i>Schefflera heptaphylla</i> , <i>Schima noronhae</i> , <i>Toxicodendron succedanea</i>

1200- 1300	Broad-leaved evergreen forest	<i>Blechnum orientale</i> , <i>Helicia grandifolia</i> , <i>Sinosideroxylon bonii</i> , <i>Symplocos lancifolia</i>
1300- 1400	Broad-leaved evergreen forest	<i>Alpinia globosa</i> , <i>Calanthe densiflora</i> , <i>Castanopsis chinensis</i> , <i>Clethra faber</i> , <i>Elaeocarpus angustifolius</i> , <i>Gnetum montanum</i> , <i>Impatiens</i> sp., <i>Lithocarpus vestitus</i> , <i>Macaranga henryi</i> , <i>Machilus chinensis</i> , <i>Manglietia conifera</i> , <i>Manglietia dandyi</i> , <i>Psychotria montana</i> , <i>Quercus myrsinifolia</i> , <i>Symplocos lancifolia</i> , <i>Tetrastigma planicaule</i>
1400- 1500	Broad-leaved evergreen forest	<i>Acer flabellatum</i> , <i>Antrophyum callifolium</i> , <i>Machilus chinensis</i>
1500- 1600	Broad-leaved evergreen forest	<i>Antrophyum callifolium</i> , <i>Beilschmiedia percoriacea</i> , <i>Clethra faberi</i> , <i>Lasianthus eberhardii</i> , <i>Phyllagathis tonkinensis</i> , <i>Pteris cretica</i> , <i>Randia spinose</i> , <i>Rhododendron fleuryi</i> , <i>Selaginella chrysocaulos</i> , <i>Symplocos cambodiana</i>
1600- 1700	Broad-leaved evergreen forest	<i>Acer flabellatum</i> , <i>Actinodaphne pilosa</i> , <i>Aglaomorpha coronans</i> , <i>Aucuba japonica</i> , <i>Camellia caudate</i> , <i>Castanopsis chinensis</i> , <i>Cinnamomum curvifolium</i> , <i>Cryptocarya chingii</i> , <i>Cryptocarya hainanensis</i> , <i>Euonymus forbesianus</i> , <i>Eurya acuminate</i> , <i>Ilex macrocarpa</i> , <i>Machilus chinensis</i> , <i>Magnolia lanuginose</i> , <i>Quercus myrsinifolia</i> , <i>Rhododendron arboreum</i> , <i>R. tanastylum</i> , <i>Rhodoleia championii</i> , <i>Selaginella chrysocaulos</i> , <i>Skimmia arborescens</i> , <i>Symplocos lancifolia</i> , <i>Tectaria decurrentis</i> , <i>Ternstroemia japonica</i>
1700- 1800	Broad-leaved evergreen forest	<i>Acer flabellatum</i> , <i>Aglaomorpha coronans</i> , <i>Alpinia blepharocalyx</i> , <i>Antrophyum callifolium</i> , <i>Aucuba japonica</i> , <i>Camellia caudate</i> , <i>Ficus septica</i> , <i>Fimbristylis</i> sp., <i>Lysionotus pauciflorus</i> , <i>Machilus chinensis</i> , <i>Manglietia conifer</i> , <i>Primulina swinglei</i> , <i>Schefflera ciliate</i> , <i>Symplocos lancifolia</i> , <i>Ternstroemia japonica</i>
1800- 1900	Broad-leaved evergreen forest	<i>Acer flabellatum</i> , <i>Aucuba japonica</i> , <i>Beilschmiedia fordii</i> , <i>Blechnum orientale</i> , <i>Camellia caudate</i> , <i>Eurya acuminate</i> , <i>Manglietia hainanensis</i> , <i>Ophiopogon reptans</i> , <i>Quercus myrsinifolia</i> , <i>Randia spinose</i> , <i>Skimmia arborescens</i> , <i>Styrax annamensis</i>
>1900	Broad-leaved evergreen forest	<i>Aucuba japonica</i> , <i>Manglietia conifera</i> , <i>Randia spinose</i> , <i>Symplocos</i> sp.

Some common species grow in low elevations from 1100 to 1400 m a.s.l such as *Alpinia globose*, *Helicia* sp., *Quercus myrsinifolia* which indicate secondary forest. The species *Symplocos lancifolia* could grow from 1200 to 1900 m a.s.l. Some common species could grow above 1400 m such as *Acer flabellatum*, *Aucuba japonica*, and *Machilus chinensis*. The species *Eurya acuminate* commonly grow along with travel or road and could grow from 1100 to 1900 m a.s.l. This species also indicates for secondary forest.

2.4.4.4. Nam Xuan Lac Species and Habitat Conservation Area

According to survey results from eight plots, the dominant species at different altitudes in Nam Xuan Lac SHCA are given in **Table 9**.

Table 9. The floristic composition of Nam Xuan Lac SHCA at different altitudes

Altitude range (m)	Forest type	Dominant/ common floral element
700-800	Broad-leaved evergreen forest on limestone	<i>Arisaema balansae</i> , <i>Arisaema lihengianum</i> , <i>Asplenium nidus</i> , <i>Burretiodendron hsienmu</i> , <i>Drynaria fortunei</i> , <i>Garcinia fragraeoides</i> , <i>Impatiens claviger</i> , <i>Leea bracteata</i> , <i>Lycianthes biflora</i> , <i>Lysimachia petelotii</i> , <i>Musa acuminate</i> , <i>Ophiorrhiza baviensis</i> , <i>Plantago major</i> , <i>Pometia pinnata</i> , <i>Rubia cordifolia</i> , <i>Strobilanthes echinata</i> , <i>Tetrastigma planicaule</i>
800-900	Broad-leaved evergreen forest on limestone	<i>Adenia heterophylla</i> , <i>Aglaia lawii</i> , <i>Aglaia spectabilis</i> , <i>Aglaomorpha coronans</i> , <i>Alphonsea philastreana</i> , <i>Amorphophallus tonkinensis</i> , <i>Archidendron balansae</i> , <i>Ardisia crenata</i> , <i>Asplenium nidus</i> , <i>Beilschmiedia fordii</i> , <i>Bischosfia javanica</i> , <i>Burretiodendron hsienmu</i> , <i>Calamus nambariensis</i> , <i>Caryota mitis</i> , <i>Celtis tetrandra</i> , <i>Cleidion spiciflorum</i> , <i>Costus speciosus</i> , <i>Debregeasia longifolia</i> , <i>Diospyros susarticulata</i> , <i>Disporum cantoniense</i> , <i>Elaeagnus gonyanthes</i> , <i>Euodia lepta</i> , <i>Ficus hirta</i> , <i>Ficus tikoua</i> , <i>Garcinia gracilis</i> , <i>Gleditsia australis</i> , <i>Gnetum montanum</i> , <i>Goniothalamus macrocalyx</i> , <i>Hydnocarpus ilicifolia</i> , <i>Ioides cirrhosa</i> , <i>Itoa orientalis</i> , <i>Jasminum longisepalum</i> , <i>Justicia glomerulata</i> , <i>Lindera glauca</i> , <i>Lysidice rhodostegia</i> , <i>Lysionotus pauciflorus</i> , <i>Machilus bonii</i> , <i>Mallotus philippensis</i> , <i>Mangifera foetida</i> , <i>Nephelium cuspidatum</i> var. <i>bassacense</i> , <i>Ophiopogon reptans</i> , <i>Paederia scandens</i> , <i>Pellionia trichosanthes</i> , <i>Piper pendulispicum</i> , <i>Pistacia weinmannifolia</i> , <i>Pometia pinnata</i> , <i>Psychotria montana</i> , <i>Pterospermum argenteum</i> , <i>Pterospermum truncatolobatum</i> , <i>Randia spinose</i> , <i>Rhaphidophora chevalieri</i> , <i>Rothmannia eucodon</i> , <i>Staurogyne diandra</i> , <i>Sterculia henryi</i> , <i>Symplocos rigida</i> , <i>Syzygium levinei</i> ,

		<i>Tacca chantrieri</i> , <i>Tectaria phaeocaulis</i> , <i>Tetrastigma planicaule</i> , <i>Trigonostemon stellaris</i> , <i>Vernonia scandens</i> , <i>Walsura cochinchinensis</i>
900-	Broad-leaved evergreen forest on limestone	<i>Aglaia odorata</i> , <i>Diospyros susarticulata</i> , <i>Elatostema balansae</i> , <i>Ficus tikoua</i> , <i>Machilus bonii</i>
1000-	Broad-leaved evergreen forest on limestone	<i>Aglaia odorata</i> , <i>Alocasia odora</i> , <i>Asplenium nidus</i> , <i>Dendrobium nobile</i> , <i>Elatostema coloniae</i> , <i>Eria coronaria</i> , <i>Gynostemma pentaphyllum</i> , <i>Hymenophyllum barbatum</i> , <i>Manglietia hookeri</i> , <i>Pothos chinensis</i> , <i>Rhaphidophora chevalieri</i> , <i>Schefflera trungii</i> , <i>Strobilanthes echinata</i> , <i>Tinospora sagittata</i> , <i>Vanda concolor</i>
1100		

Some common species could be found from 700 to above 1000 m a.s.l. such as *Aglaia lawii*, *Aglaia odorata*, *Ardisia crenata*, *Asplenium nidus*, *Piper pendulispicum*, *Strobilanthes echinata*.

2.4.5. Assessment of conservation status

A total of 169 species were listed for national and international conservation and management priorities (Annex 4). Of which, 22 species were listed in the IUCN Redlist of threatened species (2018), 78 species were listed in Vietnam Red Data Book (MOST and VAST, 2007), 106 species were listed in Decree No. 06/2019/ND-CP of Vietnamese National Government, and 35 species were listed in CITES 2007.

2.4.5.1. Cham Chu Nature Reserve

Of the total 1089 plant species recorded in the study area, 8.17% (89 species) were listed for national and international conservation and management priorities (Annex 4). Of these, 4.78% (52 species) are listed in the IUCN Redlist of threatened species (2018): 12 species are threatened including six Endangered species and six Vulnerable species.

Of the total of 50 species (4.9% of total recorded species) listed in the Vietnam Red Data Book (MOST and VAST, 2007), 37 species are threatened including two Critically Endangered species, 14 Endangered, and 34 Vulnerable species (Annex 4).

Fifty-two species (4.76% of total recorded species) are listed in Decree No. 06/2019/ND-CP of the Vietnamese National Government. This lists three species in Group IA and 49 species in Group IIA (Annex 4).

There are 35 species (3.21% of total recorded species) listed in CITES 2017. Two species are listed in Appendix 1; 31 species are listed in Appendix 2, and 2 species are listed in Appendix 3 of the Convention (Annex 4).

These species of conservation significance discussed here are not only important to the Vietnamese national government but also to international organizations and agencies for conservation planning, management, monitoring, and decision-making (Rodrigues *et al.*, 2006).

2.4.5.2. Bac Me Nature Reserve

A total of 86 species (8.29%) were listed for national and international conservation and management priorities (Annex 4). Of these, 47 species (4.53%) are listed in the Vietnam Red Data Book (MOST and VAST, 2007), 51 species (5%) are listed in the IUCN Redlist of threatened species (2018), and 61 species are listed in Decree No. 06/2019/NĐ-CP of Vietnamese Government (Appendix 2).

In the Vietnam Red Data Book's species, there are three Critically Endangered (0.29%), 17 Endangered (1.64%), and 27 Vulnerable (2.6%) species (Annex 4, [Figure 40](#)[Figure 40](#)). In the IUCN Redlist's species, there are two Critically Endangered (0.19%), five Endangered (0.48%), and five Vulnerable (0.48%) (Annex 4, [Figure 41](#)[Figure 41](#)). In the species of Decree No. 06/2019/NĐ-CP, there are six species in Group IA and 55 species in Group IIA.

Figure 40. Number of species are listed in the Vietnam Red Data Book 2007

Figure 41. Number of species are listed in the IUCN Red List 2018

It is significant that 12.05% (125 species) recorded plant species in Bac Me NR were listed as priority conservation species by international and national organizations. According to the Vietnam Red Data Book (2007), 47 threatened species were found in the NR. Of which, three are Critically Endangered including one tree of conifer (*Cupressus vietnamensis*), one shrub of medicine plant (*Aucuba japonica*), and one Slipper orchid (*Paphiopedilum helenae*). Both conifer and orchid species are endermic and restricted distribution in the limestone of Northern Vietnam such as in Ha Giang and Tuyen Quang provinces. Of the 17 Endangered species, one conifer

species (*Calocedrus rupestris*), a hardwood tree (*Burretiodendron hsienmu*), three medicine plants (*Dysosma difformis*, *Paris polyphylla*, *Polygonatum punctatum*), and six orchid species (*Anoectochilus calcareus*, *A. setaceus*, *Dendrobium chrysanthum*, *D. nobile*, *Nervilia fordii*, *Paphiopedilum malipoense*) are seriously collected by local people. Although some species were listed as Vulnerable species in the book, they have highly threatened also. They are a conifer species (*Taxus chinensis*), three hardwood tree species (*Markhamia stipulate*, *Canarium pimela*, *Chukrasia tabularis*), a medicine plant (*Disporopsis longifolia*), and two orchid species (*Dendrobium fimbriatum*, *Paphiopedilum hirsutissimum*). The results are very significant when compared with 157 priority conservation species of whole Ha Giang province (Vu Anh Tai, 2014).

Of the 12 threatened species in the IUCN Redlist, three Slipper Orchid species including *Paphiopedilum helena* (CR), *Paphiopedilum malipoense* (EN), *Paphiopedilum hirsutissimum* (VU) are always hunted by Orchid collectors in the NR because of high value. Five tree species including *Magnolia grandis* (CR), *Cupressus vietnamensis* (EN), *Calocedrus rupestris* (EN), *Taxus chinensis* (EN), *Burretiodendron hsienmu* (EN) are strong wood and are cut for house and furniture making, and trading. Other three tree species including *Goniothalamus macrocalyx* (VU), *Phoebe macrocarpa* (VU), *Woonyoungia septentrionalis* (VU), and a herb species *Siliquamomum tonkinense* (VU) are not serious threatened in the NR, but face to habitat lose.

2.4.5.3. Phia Oac – Phia Den National Park

A total of 56 species (6.81%) were recorded as threatened species and priority species for conservation. Of which, 37 species (4.5%) are recorded as threatened species in national and international level, 39 (4.74) species are recorded in No. 06/2019/NĐ-CP of Vietnamese Government and CITES 2017 Convention for management (Annex 4).

Of the 33 threatened species, two species (0.24%) are listed as Critically Endangered (CR), 12 species (1.46%) are listed as Endangered (EN) and 19 species (2.31%) are listed as Vulnerable (VU) (Fig. 7). While 33 species (3.01%) are recognized in the Vietnam Red Data Book (MOST and VAST, 2007), only six species (0.73%) are listed in the IUCN Redlist of threatened species (2021).

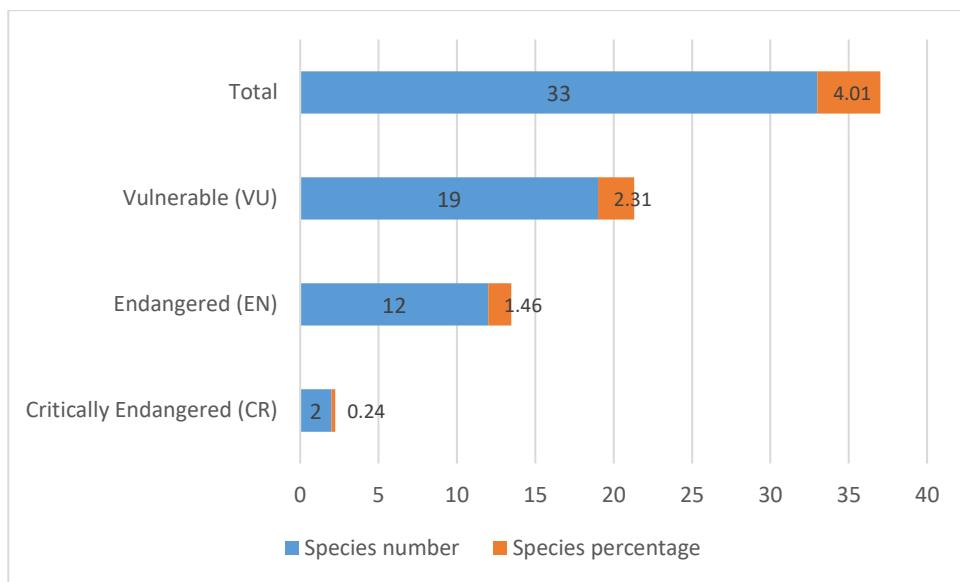

Figure 42. Number of threatened species in both nation and internation level

Of the six species which were listed as Vulnerable species in the IUCN Redlist (2021), two species *Paris polyphylla*, *Siliquamomum tonkinense* are highly collected for traditional medicine. In the aspect of national threatened species, nice species including *Anoectochilus calcareus* (EN), *Anoectochilus setaceus* (VU), *Asarum caudigerum* (VU), *Codonopsis javanica* (VU), *Curculigo orchoides* (EN), *Drynaria fortunei* (EN), *Gynostemma pentaphyllum* (EN), *Homalonema pierreana* (VU), *Stephania dielsiana* (VU) are also collected for tradition medicine. Four species including *Magnolia cathcartii* (CR), *Magnolia baillonii* (VU), *Manglietia dandyi* (VU), *Phoebe macrocarpa* (VU) are hard wood and high price, therefore they usually exploit for trade. The species *Aerides falcatum* (VU) is usually collected for ornamental because of beautiful flowers. The species *Calamus nambariensis* (VU) is a strong liana, therefore it is collected for knitting rope. *Melientha suavis* (VU) is a vegetable and could make a delicious food.

2.4.5.4. Nam Xuan Lac Species and Habitat Conservation Area

A total of 72 species were recorded as threatened species and priority species for conservation. Of which, 32 species are recorded as threatened species in national and international level, 51 species are recorded in No. 84/2021/NĐ-CP of Vietnamese Government (Appendix 4).

Of the 32 threatened species, 10 species are listed as Endangered (EN) and 22 species are listed as Vulnerable (VU). There is no species listed as Critically Endangered (CR). While 30 species are recognized in the Vietnam Red Data Book (MOST and VAST, 2007), only six species are listed in the IUCN Redlist of threatened species (2021) (Annex 4).

Of the six species listed in the IUCN Redlist, *Burretiodendron hsienmu* (EN) is the most illegal cut because of the high quality of timber. Remain species such as *Dipterocarpus retusus* (EN), *Cinnamomum balansae* (EN) are also highly threatened by illegal cutting. For the 30 priority species for national conservation, most of them are high value for traditional medicine such as *Dysosma difformis* (EN), *Gynostemma pentaphyllum* (EN), *Polygonatum punctatum* (EN),

Stephania dielsiana (VU), *Tinospora sagittata* (VU) and ornamental such as *Dendrobium nobile* (EN), *Dendrobium fimbriatum* (VU).

2.4.6. Linkage with other groups

2.5.6.1. GIS group

The study area maps were provided by GIS group, and cooperated in publish an international article:

- VT Pham, TT Pham, NB Trinh, SK Nguyen, MT Dao, MS Nuraliev (2021). *Cynanchum quangbinhense* (Apocynaceae: Asclepiadoideae), a new species from Vietnam, and additional information on *C. officinale*. *Taiwania* 66 (4), 459–465

2.5.6.2. Social group

The number of ethnic groups people and families, income and culture of local people provided by the Social Group (the final report of Social Group) could show some threat to the flora. That data is also an important basis for the development of community-based conservation methods.

2.5. Threats to the vegetation and flora in the study areas.

The vegetation and flora of Cham Chu NR, Bac Me NR, and Nam Xuan Lac SHCA were seriously affected by some human factors such as selective cutting of high economic value trees, harvesting non-timber forest products, and forest farming, and agriculture activities. In addition, the vegetation and flora of Phia Oac – Phia Den NP and Nam Xuan Lac SHCA were affected by road construction and mineral extraction.

2.5.1. Select cutting of high economic value trees

This negative impact occurred in most study areas, including mountainous and limestone mountains. In particular, the limestone area is more severely affected by the resilience of this type of forest which takes a long time. Wood is used by local people to make houses or trade. Many traces of logging were recorded by the research group in the fieldwork duration. The illegal activity in Cham Chu and Bac Me NRs is serious ([Figure 53](#)[Figure 53](#), [Figure 54](#)[Figure 54](#)). While Cham Chu NR is strongly affected by this activity, Bac Me NR is more minor.

In particular, this impact will have a more serious on the limestone mountains at the top and near the top which place is difficult to reach for forest rangers. This habitat is home to many rare species such as *Calocedrus rupestris*, *Taxus chinensis*, *Amentotaxus yunnanensis*, and Slipper Orchids, etc. The three species most illegal cut by local people coming from both provinces, Tuyen Quang and Ha Giang, are *Ficus vasculosa*, *Burretiodendron hsienmu*, and *Taxus chinensis* ([Figure 53](#)[Figure 53](#), [Figure 54](#)[Figure 54](#)). The species *Burretiodendron hsienmu* (Vietnamese: Gỗ Nghiên) which species listed as Endangered species according to IUCN (2018) is strong wood and preferred for construction, house building, and furniture with high economic value. The wood of *Taxus chinensis* (Vietnamese: Thông đỗ) which species also listed as EN (IUCN, 2018) is illegally exported to China.

2.5.2. Harvesting non-timber forest products.

The exploitation of non-timber forest products in the study areas is not serious, but it is especially serious for some threatened species such as Silver lamé orchid (velvet orchid - *Anoectochilus calcareus*), Slipper orchids, *Paris polyphylla*, and other orchid species. The longevity harvesting can lead to these species disappearing from the area. In addition, there are still impacts on the exploitation of medicinal plants, such as the exploitation of the *Dysosma difformis*, *Mahonia spp.*, *Gomphandra mollis*, *Stephania rotunda*, etc.

In large scale, the tube of *Stephania rotunda* was seriously collected by local people in Bac Me NR ([Figure 55](#)[Figure 55](#),[Figure 56](#)[Figure 56](#)). The species is listed in Group IIA of Government Decree No. 06/2019/NĐ-CP.

2.5.3. Forest farming and agriculture activities

Forest habitats at elevations of less than 700m a.s.l. at Cham Chu NR, Bac Me NR, and Nam Xuan Lac SHCA, and elevations less than 1100m a.s.l. at Phia Oac – Phia Den NP has been highly impacted by agricultural activities. This happens in most of the forest valleys of Cham Chu NR were close to local houses (Fig. 43). In Bac Me NR, these activities reach up to soil slopes, close to the top of limestone mountain ([Figure 58](#)[Figure 58](#),[Figure 59](#)[Figure 59](#)). The activities have divided the forest into small pieces, and therefore, the distribution of plant species is interrupted. Although this factor is serious, it concerns the livelihood of local people when they are living in the center of the two Nature Reserves. Farming such as corn or rice is the main income for the local people. In the contrast, agriculture activities in the center of Phia Oac – Phia Den NP and Nam Xuan Lac SHCA are less serious.

2.6. Recommendation for flora diversity conservation in the study areas

Results of this research clearly show that the study areas have very high flora diversity and conservation significance. Especially, those areas are habitats of some endangered species such as *Calocedrus rupestris*, *Taxus chinensis*, *Dipterocarpus retusus*, *Burretiodendron hsienmu*, or *Paphiopedilum helena*. On the other hand, the study also shows that the natural flora in general and the populations of these species in particular in the study area are being degraded by human impacts. Some solutions below are urgently needed to protect and conserve the flora and the threatened species:

1). To improve the roles of forest rangers, Commune, and District People's Committee at the NR to manage and protect the forest.

2) To conduct education to increase awareness of local communities on biodiversity conservation. Explain to residents the importance of forest protection, plant diversity conservation as well as governmental legal regulations on forest protection and biodiversity conservation. Change the materials of house construction by cement to protect the current trees and not affect the environment.

3) To apply various measures to effectively control over forest farming in the study area. Do not expand the corn or rice farms.

4) To conduct regular forest protection patrol, forest rehabilitation, monitoring of key plant species, and other plant conservation programs.

5) To apply a community-based conservation approach in the study area, involving local villagers in various forest protection and biodiversity conservation activities; increase the

livelihood of residents through various income-raising approaches to mitigate their dependence on forest products and lands. Especially support, and encourage local people to self-food.

6) Enhancing collaboration between provincial/district authorities and their enforcement forces (forest rangers) for regular information exchange, sharing experience on forest management, and collaborative actions on combating transborder illegal logging and harvesting non-timber forest products.

2.5 Publications and products

2.5.1. Publications

Two international (ISI journal) and two national articles have been published.

1. VT Pham, TT Pham, NB Trinh, SK Nguyen, MT Dao, MS Nuraliev (2021). *Cynanchum quangbinhense* (Apocynaceae: Asclepiadoideae), a new species from Vietnam, and additional information on *C. officinale*. *Taiwania* 66 (4), 459–465

2. Pham, V. T., Trinh, N. B., Phan, K. L. & Lin, C. -W. (2019). Two new species, *Begonia dinhdai* and *B. bacmeensis* (Begoniaceae), from Vietnam. *Phytotaxa*, 427(1), 22–30. <https://doi.org/10.11646/phytotaxa.427.1.3>

3. Phan K. L., Vu, T. D., Nguyen, C. T., Pham, V. T., Trinh, N.B. (2019). A Checklist of Pteridophytes collected on Cham Chu mountains and adjacent sites. *Tap chi Sinh hoc* 41(4): 75–89. DOI: 10.15625/0866-7160/v41n4.14639

4. NB Trinh, TT Pham, VD Nguyen, VT Pham (2021). A new recorded species *Begonia wenshanensis* C.M. Hu ex C.Y. Wu & T.C. Ku (Begoniaceae) for the flora of Vietnam. *TNU Journal of Science and Technology* 226 (14), 67 – 72.

Three manuscripts have been submitted:

1. *Mitreola nahangensis* (Loganiaceae), a new species from Northern Vietnam. The manuscript had submitted to Phytotaxa journal.

2. Flora features of the mountainous karst in Bac Me Nature Reserve and recommendations for conservation policy” (In English). The manuscript had submitted to Journal of Science - Tay Bac University

3. *Aristolochia austroyunnanensis* (Aristolochiaceae), a new record for the flora of Vietnam” (In English). The manuscript had submitted to VNU Journal of Science: Natural Sciences and Technology.

Two manuscripts are writing

1. Elevation plant species diversity pattern in Northeastern Mountainous Region of Vietnam.

2. *Jasminanthes vietnamensis* (Apocynaceae, Asclepiadoideae) - A new species from limestone mountain Northern Vietnam

2.5.2. Guideline

A guideline for biodiversity monitoring was written.

1. Guideline for Biodiversity Investigation and Monitoring in Phia Oac – Phia Den National Park (50 pp, In Vietnamese).

2.5.3. Workshop and seminars

1. A presentation was reported in a scientific workshop: Plant Conservation Research in Mountainous Region of Northern Vietnam (The workshop was held in Ha Noi on 23, 24 October 2019 by Fauna and Flora International)

2. A presentation titled “Flora diversity of the mountainous karst in Bac Me Nature Reserve – Ha Giang province and recommendations for conservation policy” was reported in a seminar at Ton Duc Thang University on 8 July 2021.

3. A presentation titled “The diversity of Magnoliaceae in Phia Oac – Phia Den National Park, Cao Bang province” was reported in a seminar at Ton Duc Thang University on 17 July 2021

4. A presentation titled “Flora diversity of the mountainous karst in Cham Chu Nature Reserve – Tuyen Quang province” was reported in a seminar at Ton Duc Thang University on 05 August 2021

III. PROGRESS OF YOUNG SCIENTISTS

- Mr. VU Dinh Toan has done a thesis titled diversity of Pteridophytes in Cham Chu and Bac Me Nature Reserves and graduated with Bachelor in Biology from Ha Noi University of Science

- A Ph.D. student name Nguyen Duy Hung benefited from the group in improving plant field survey techniques and data collection. Two assistants including Ms. Vu Thuy Duong and Mr. Nguyen Van Dat were trained in field survey organization, and plant investigation skills on line-transect, and plots.

- The training course on “Biodiversity Investigation and Monitoring” in Phia Oac – Phia Den National Park on 6 May 2021 was participated by eight staff of the National Park ([Table 10](#))

Table 10. List of participants in the short training course “Biodiversity Investigation and Monitoring” in Phia Oac – Phia Den National Park 6 May 2021

No.	Name	Organization
1	Hà Văn Hương	Phia Oac – Phia Den NP
2	Hoàng Thị Nha	Phia Oac – Phia Den NP
3	Trương Ngọc Long	Phia Oac – Phia Den NP
4	Lý Tòn Sênh	Phia Oac – Phia Den NP
5	Nguyễn Hữu Lượng	Phia Oac – Phia Den NP
6	Đinh Thị Hợi	Phia Oac – Phia Den NP
7	Bé Thị Cúc	Phia Oac – Phia Den NP
8	Bàn Thị Hiền	Phia Oac – Phia Den NP

IV. FINANCIAL REPORT

The “Account book” has been submitted to Dropbox under name the “06 Plant Account book”. There were not any changes made to the original plan.

V. SELF-EVALUATION AND NECESSARY WORKS IN FUTURE

5.1 Describe the level of achievement of the research project concerning the Purpose mentioned in the application and the reasons why concluded so.

All the objectives of the group have been completed.

5.2 Describe the tasks remained and/or identified to achieve the Purpose.

Although the group worked very hard, this final report almost presents the results, the discussion and language are still needed to improve after review from CRES and NEF

5.3 Report problems/difficulties the group encountered, changes made/to be made to the original
The COVID-19 pandemic affected very strongly; therefore, the group have limited time to do the project.

5.4. Describe any lessons learnt (if any).

ACKNOWLEDGEMENTS

This study was funded by Nagao Natural Environment Foundation, Japan. We would like to express our sincere thanks to the following organizations/agencies for kindly permitting and providing favorite conditions for us to implement this assignment: NEF - Japan, Central Institute for Natural Resources and Environmental Studies (VNU-CRES), Provincial People's Committee of Tuyen Quang, Provincial People's Committee of Ha Giang, Provincial People's Committee of Cao Bang, Provincial People's Committee of Bac Kan, Management Board of Cham Chu NR, Management Board of Bac Me NR, Management Board of Phia Oac – Phia Den NP, Management Board of Nam Xuan Lac SHCA. Our hearty thanks are to the following persons who have kindly helped us to complete all formality procedures and provided us with the necessary conditions for implementing this assignment:

Prof. R. Ohtsuka – President of Nagao Natural Environment Foundation, Japan

Dr. M. Komoda - Nagao Natural Environment Foundation, Japan

Dr. T. Oizumi - Nagao Natural Environment Foundation, Japan

Dr. Hoang Van Thang - VNU-CRES

Dr. Vo Thanh Son - VNU-CRES

Mrs. Tran Thu Phuong - VNU-CRES

Dr. Ha Thi Thu Hue - VNU-CRES

We also sincerely thank all staff of Cham Chu NR, Bac Me NR, Phia Oac – Phia Den NP, Nam Xuan Lac SHCA, and many other residents for their valuable help during our survey in the forest of Cham Chu NR, Bac Me NR, Phia Oac – Phia Den NP, Nam Xuan Lac SHCA.

ANNEX

Annex 1. Detail of survey trips

No	Date	Content
First field trip: Cham Chu NR		
1.	24 Oct. 2018	<ul style="list-style-type: none"> - Morning: Move from Hanoi to Tuyen Quang province, meeting with Provincial Forest Protection Department, then move to Cham Chu NR - Afternoon: Move to Cao Duong village, meeting with local forest rangers and guiders for planning of trips or camping places
2.	25 Oct. 2018	Field survey
3.	26 Oct. 2018	Field survey
4.	27 Oct. 2018	Field survey
5.	28 Oct. 2018	Field survey
6.	29 Oct. 2018	Field survey
7.	30 Oct. 2018	Field survey
8.	31 Oct. 2018	<ul style="list-style-type: none"> - Morning: Group meeting, group leader will collect all data which got from the trip from the members - Afternoon: Move back to Hanoi
Second field trip: Cham Chu NR		
9.	19 April 2019	<ul style="list-style-type: none"> - Morning: Move from Hanoi to Tuyen Quang province, meeting with Provincial Forest Protection Department, then move to Cham Chu NR - Afternoon: Move to Cao Duong village, meeting with local forest rangers and guiders for planning of trips or camping places
10.	20 April 2019	Field survey
11.	21 April 2019	Field survey
12.	22 April 2019	Field survey
13.	23 April 2019	Field survey
14.	24 April 2019	Field survey
15.	25 April 2019	Field survey
16.	26 April 2019	<ul style="list-style-type: none"> - Morning: Group meeting, group leader will collect all data which got from the trip from the members - Afternoon: Move back to Hanoi
Third field trip: Bac Me NR		
17.	5 July 2019	<ul style="list-style-type: none"> - Morning: Move from Hanoi to Ha Giang province, then move to Bac Me NR - Afternoon: Stay in Minh Ngoc town, group meeting and discuss with local forest rangers and guiders for planning of trips or camping places
18.	6 July 2019	Field survey in Lùng Càng village, Minh Ngoc commune, preparing for going to the top of mountain
19.	7 July 2019	Go to the top of mountain at Lung Cang village and camping there
20.	8 July 2019	Field survey in the camp site
21.	9 July 2019	Go down to Lung Cang village and return to Minh Ngoc town
22.	10 July 2019	Field survey in Lạc Nông forest

23.	11 July 2019	Field survey in Lạc Nông forest
24.	12 July 2019	- Morning: Return to Hanoi

Fourth field trip: Bac Me NR

25.	24 Dec. 2019	- Morning: Move from Hanoi to Ha Giang province, then move to Bac Me NR - Afternoon: Stay in Minh Ngoc town, group meeting and discuss with local forest rangers and guides for planning of trips or camping places
26.	25 Dec. 2019	Field survey in Lùng Càng village, Minh Ngoc commune, preparing for going to the top of mountain
27.	26 Dec. 2019	Go to the top of mountain at Lung Cang village and camping there
28.	27 Dec. 2019	Field survey in the camp site
29.	28 Dec. 2019	Go down to Lung Cang village and return to Minh Ngoc town
30.	29 Dec. 2019	Field survey in Lạc Nông forest
31.	30 Dec. 2019	Field survey in Lạc Nông forest
32.	31 Dec. 2019	- Morning: Return to Hanoi

Fifth field trip: Phia Oac – Phia Den NP

33.	03 June 2020	Move from Hanoi to Cao Bang province, then move to Phia Oac – Phia Den NP
34.	04 June 2020	Field survey in Phia Oac – Phia Den NP
35.	05 June 2020	Field survey in Phia Oac – Phia Den NP
36.	06 June 2020	Field survey in Phia Oac – Phia Den NP
37.	07 June 2020	Field survey in Phia Oac – Phia Den NP
38.	08 June 2020	Field survey in Phia Oac – Phia Den NP
39.	09 June 2020	Field survey in Phia Oac – Phia Den NP
40.	10 June 2020	Return to Hanoi

Sixth field trip: Nam Xuan Lac SHCA

41.	24 August 2020	Move from Hanoi to Cao Bang province, then move to Nam Xuan Lac SHCA
42.	25 August 2020	Field survey in Nam Xuan Lac SHCA
43.	26 August 2020	Field survey in Nam Xuan Lac SHCA
44.	27 August 2020	Field survey in Nam Xuan Lac SHCA
45.	28 August 2020	Field survey in Nam Xuan Lac SHCA
46.	29 August 2020	Field survey in Nam Xuan Lac SHCA
47.	30 August 2020	Field survey in Nam Xuan Lac SHCA
48.	31 August 2020	Return to Hanoi

Seventh field trip: Phia Oac – Phia Den NP

49.	06 May 2021	Move from Hanoi to Cao Bang province, then move to Phia Oac – Phia Den NP
50.	07 May 2021	Field survey in Phia Oac – Phia Den NP
51.	08 May 2021	Field survey in Phia Oac – Phia Den NP
52.	09 May 2021	Field survey in Phia Oac – Phia Den NP
53.	10 May 2021	Field survey in Phia Oac – Phia Den NP
54.	11 May 2021	Field survey in Phia Oac – Phia Den NP
55.	12 May 2021	Field survey in Phia Oac – Phia Den NP
56.	13 May 2021	Return to Hanoi

Eighth field trip: Nam Xuan Lac SHCA

57.	28 October 2021	Move from Hanoi to Cao Bang province, then move to Nam Xuan Lac SHCA
58.	29 October 2021	Field survey in Nam Xuan Lac SHCA
59.	30 October 2021	Field survey in Nam Xuan Lac SHCA
60.	31 October 2021	Field survey in Nam Xuan Lac SHCA
61.	01 November 2021	Field survey in Nam Xuan Lac SHCA
62.	02 November 2021	Field survey in Nam Xuan Lac SHCA
63.	03 November 2021	Field survey in Nam Xuan Lac SHCA
64.	04 November 2021	Return to Hanoi

Annex 3. Checklist of plant species

Scientific name	Vietnamese name	Family	Plant habit	Use	Cham Chu	Bac Me	Phia Oac	Nam Xuan Lac
<i>Adiantum cappinus-veneris</i> Linn		Adiantaceae	Shrub	Orn			x	
<i>Adiantum caudatum</i> L.	Đuôi chồn	Adiantaceae	Shrub	Orn	x			x
<i>Adiantum flabellulatum</i> L.	Dây vót	Adiantaceae	Shrub	Orn	x			
<i>Cheilanthes farinosa</i> Kaulf.	Thân mõ bột	Adiantaceae	Shrub		x			
<i>Hemionitis arifolia</i> T. Moore	Ráng hoạn xỉ	Adiantaceae	Shrub		x			x
<i>Monachosorum henryi</i> H.Christ.	Mô na henry	Adiantaceae	Shrub		x			
<i>Onychium lucidum</i> Spreng.	Đé xỉ suốt	Adiantaceae	Shrub		x			
<i>Pityrogramma calomelanos</i> Link	Ráng cà lò	Adiantaceae	Shrub		x			
<i>Pityrogramma calomelanos</i> Link	Ráng cà lò	Adiantaceae	Herb					x
<i>Angiopteris yunnanensis</i> Hieron		Angiopteridaceae	Shrub	Orn			x	
<i>Asplenium antrophyoides</i> H.Christ	Ráng canxi bàu dục	Aspleniaceae	Shrub	Orn	x			
<i>Asplenium crinicaule</i> Hance		Aspleniaceae	Herb				x	
<i>Asplenium ensiforme</i> Wall. ex Hook.f.		Aspleniaceae	Herb				x	
<i>Asplenium nidus</i> L.	Tổ điếu	Aspleniaceae	Epiph.	Orn	x		x	x
<i>Asplenium obscurum</i> Blume	Ráng canxi mờ	Aspleniaceae	Epiph.	Orn	x			
<i>Asplenium unilaterale</i> Lam.	Ráng canxi một bên	Aspleniaceae	Epiph.	Orn	x			x
<i>Blechnum orientale</i> L.	Dáng dùa đông	Blechnaceae	Herb	Orn	x		x	x
<i>Brainea insignis</i> (Hook.) J. Sm.		Blechnaceae	Shrub				x	
<i>Cibotium barometz</i> (L.) J.Sm.	Cầu tích	Cibotiaceae	Herb	Med	x			x

Scientific name	Vietnamese name	Family	Plant habit	Use	Cham Chu	Bac Me	Phia Oac	Nam Xuan Lac
<i>Cyathea chinensis</i> Copel.	Ráng tiên tọa trung quốc	Cyatheaceae	Herb	Orn	x		x	
<i>Cyathea contaminans</i> Cop	Quyết thân gỗ	Cyatheaceae	Herb	Orn	x			
<i>Cyathea gigantea</i> Holttum	Ráng tiên tọa không lò	Cyatheaceae	Herb	Orn	x		x	x
<i>Davallia divaricata</i> Blume	Cút đòng	Davalliaceae	Herb		x			x
<i>Davallia lorrainii</i> Hance		Davalliaceae	Shrub				x	
<i>Hypolepis tenuifolia</i> Bernha.	Ráng ha lân lá nhỏ	Dennstaedtiaceae	Herb		x			
<i>Lindsaea javanensis</i> Blume	Ráng liên sơn java	Dennstaedtiaceae	Herb		x			x
<i>Lindsaea lucida</i> Blume	Ráng liên sơn sáng	Dennstaedtiaceae	Herb		x			
<i>Microlepia hookeriana</i> C.Presl.	Ráng li vân hooker	Dennstaedtiaceae	Herb		x			x
<i>Microlepia marginata</i> C.Chr.	Ráng li vân bìa	Dennstaedtiaceae	Herb		x			
<i>Microlepia speluncae</i> T. Moore	Ráng li vân to	Dennstaedtiaceae	Herb		x			
<i>Arachniodes assamica</i> Ohwi	Ráng thù xỉ át-sam	Dryopteridaceae	Herb		x			x
<i>Arachniodes hasseltii</i> (Bl.) Ching.		Dryopteridaceae	Shrub				x	
<i>Cibotium barometz</i> (L.) J. Sm.		Dicksoniaceae	Shrub	Med			x	
<i>Ctenitis decurrentipinnata</i> (Ching) Ching		Dryopteridaceae	Shrub				x	
<i>Diplazium lanceum</i> (Thunb.) C. Presl		Dryopteridaceae		Med			x	

Scientific name	Vietnamese name	Family	Plant habit	Use	Cham Chu	Bac Me	Phia Oac	Nam Xuan Lac
<i>Dipteris chinensis</i> C.Chr.		Dipteridaceae	Shrub				x	
<i>Polystichopsis chinensis</i> Holttum	Ráng thù xỉ trung quốc	Dryopteridaceae	Herb		x			x
<i>Polystichum chingae</i> Ching		Dryopteridaceae					x	
<i>Tectaria yunnanensis</i> (Baker) Ching		Dryopteridaceae	Shrub				x	
<i>Equisetum ramosissimum</i> Desf.	Cỏ tháp bút	Equisetaceae	Herb	Med			x	x
<i>Dicranopteris linearis</i> Underw.	Guột	Gleicheniaceae	Herb		x		x	x
<i>Dicranopteris dichotoma</i> (Thunb.) Bernh.		Gleicheniaceae	Shrub				x	
<i>Crepidomanes bipunctatum</i> Copel.	Ráng song điểm	Hymenophyllaceae	Herb		x			x
<i>Crepidomanes minutus</i> Blume	Thu mạc nhỏ	Hymenophyllaceae	Herb		x			
<i>Hymenophyllum barbatum</i> (Bosch) Baker		Hymenophyllaceae	Liana				x	
<i>Hymenophyllum oxydon</i> Bak.	Mặc diệp song điểm	Hymenophyllaceae	Herb		x			
<i>Trichomanes cystaseiroides</i> H.Christ ex Tardieu & C.Chr.	Mao diệp song	Hymenophyllaceae	Herb		x			x
<i>Lycopodium complannatum</i> L.	Thạch tùng dẹp	Lycopodiaceae	Epiph.	Med	x	x	x	x
<i>Huperzia fordii</i> (Baker) Holub		Lycopodiaceae	Shrub	Med			x	
<i>Huperzia serrata</i> (Thunb.) Trevis.		Lycopodiaceae	Shrub	Med			x	
<i>Huperzia squarrosa</i> (G. Forst.) Trevis.	Thạch tùng vẩy	Lycopodiaceae	Epiph.			x		
<i>Lycopodiella cernua</i> (L.) Pic.		Lycopodiaceae	Shrub				x	
<i>Lycopodium clavatum</i> L.		Lycopodiaceae	Shrub				x	

Scientific name	Vietnamese name	Family	Plant habit	Use	Cham Chu	Bac Me	Phia Oac	Nam Xuan Lac
<i>Lygodium flexuosum</i> (L.) Sw.		Lygodiaceae	Liana			x		
<i>Angiopteris evecta</i> (G. Forst.) Hoffm.	Móng ngựa	Marattiaceae	Herb		x			
<i>Angiopteris yunnanensis</i> Hieron	Hiển dực vân nam	Marattiaceae	Herb		x			x
<i>Archangiopteris tonkinensis</i> Ching.	Cỏ hiển bắc bộ	Marattiaceae	Herb		x			
<i>Marsilea minuta</i> L.		Marsiliaceae	Shrub	Med, Edi			x	
<i>Marsilea quadrifolia</i> L.	Rau dêu bón lá	Marsiliaceae	Herb	Med		x	x	x
<i>Nephrolepis cordifolia</i> (L.) C. Presl	Ráng	Nephrolepidaceae	Herb	Med, Orn	x			x
<i>Oleandra musifolia</i> (Blume) C.Presl		Oleandraceae	Shrub				x	
<i>Osmunda japonica</i> Thunb.		Osmundaceae	Shrub				x	
<i>Aglaomorpha coronans</i> Copel.	Ráng long cuốc	Polypodiaceae	Herb	Med, Orn	x		x	x
<i>Colysis insgnis</i> J.Sm.	Vi quần hancock	Polypodiaceae	Herb		x			
<i>Colysis wrightii</i> Ching.	Ráng cỏ lý wrihgt	Polypodiaceae	Herb		x			
<i>Drynaria bonii</i> H.Christ	Cốt toái bồ bon	Polypodiaceae	Epiph.	Med	x			x
<i>Drynaria bonii</i> H.Christ	Cốt toái bồ bon	Polypodiaceae	Epiph.	Med				
<i>Drynaria fortunei</i> (Kuntze ex Mett.) J. Smith		Polypodiaceae	Epiph.	Med			x	
<i>Phymatosorus nigrescens</i> (Bl.) Pic.-Ser.		Polypodiaceae	Shrub				x	
<i>Polypodium bauretii</i> C.Chr. & Tard.	Ráng đà túc Bourret	Polypodiaceae	Herb		x			
<i>Polypodium fasciatum</i> C.Presl.	Ráng đà túc bò	Polypodiaceae	Herb		x			

Scientific name	Vietnamese name	Family	Plant habit	Use	Cham Chu	Bac Me	Phia Oac	Nam Xuan Lac
<i>Pseudodrynaria coronans</i> (Wall. ex Mett.) Ching		Polypodiaceae	Shrub			x		
<i>Pyrrhosia tonkinensis</i> Ching		Polypodiaceae	Shrub			x		
<i>Pyrrosia lanceolata</i> Farw.	Ráng hỏa mạc thon	Polypodiaceae	Herb		x			
<i>Pyrrosia longissima</i> Pic. & Ser.	Ráng hỏa mạc lá dài	Polypodiaceae	Herb		x			
<i>Pyrrosia subfurfuracea</i> Ching	Ráng hỏa mạc cám	Polypodiaceae	Herb		x			x
<i>Psilotum complanatum</i> Sw.	Loã tùng dẹp	Psilotaceae	Herb	Med	x	x		x
<i>Psilotum nudum</i> (L.) Griseb.		Psilotaceae	Shrub	Med			x	
<i>Antrophyum callifolium</i> Blume		Pteridaceae	Herb				x	
<i>Pteris biaurita</i> L.	Chân xỉ hai tai	Pteridaceae	Herb	Med	x			
<i>Pteris cadieri</i> H.Christ	Ráng chân xỉ cadiere	Pteridaceae	Herb	Med	x			
<i>Pteris cretica</i> L.	Sẹo gà	Pteridaceae	Herb	Med	x		x	x
<i>Pteris decrescens</i> H.Christ	Chân xỉ eo	Pteridaceae	Herb	Med	x			x
<i>Pteris deltodon</i> Baker.	Ráng tam giác	Pteridaceae	Herb	Med	x			
<i>Pteris ensiformis</i> Burm.f.	Ráng hình gươm	Pteridaceae	Herb	Med,Edi,Orn	x			
<i>Pteris excelsa</i> Gaud.		Pteridaceae	Shrub	Orn			x	
<i>Pteris linearis</i> Poir.		Pteridaceae	Cr	Orn			x	
<i>Pteris longipes</i> D.don	Ráng cuống dài	Pteridaceae	Herb	Med	x			
<i>Pteris semipinnata</i> L.	Ráng chân xỉ lược	Pteridaceae	Herb	Med,Orn	x			

Scientific name	Vietnamese name	Family	Plant habit	Use	Cham Chu	Bac Me	Phia Oac	Nam Xuan Lac
<i>Pteris vittata</i> L.	Ráng chân xỉ có sọc	Pteridaceae	Liana	Med	x			x
<i>Vittaria elongata</i> Sw.	Râu rồng	Pteridaceae	Epiph.					x
<i>Lygodium conforme</i> C.Chr.	Bòng bòng lá to	Schizaeaceae	Liana		x			x
<i>Lygodium japonicum</i> (Thunb.) Sw.		Schizaeaceae	Shrub	Med	x		x
