Abstract

Five species of *Boerlagiodendron* (Araliaceae), including four from the Solomon Islands and one from the New Hebrides, are transferred, according to nomenclatural necessity, to *Osmoxylon*.

Some years ago I revised briefly the East Melanesian species of *Boerlagiodendron* Harms, describing two new species and demonstrating that four species could be found in the Solomon Islands and another in the New Hebrides. Since then it has been shown that the generic name *Osmoxylon* Miq. must be used for this very distinctive group of plants. As the Araliaceae, apart from *Schefflera*, has now been published in the Flora Malesiana (Philipson, 1979), it is appropriate to prepare a correct nomenclatural list of the East Melanesian species to supplement my original paper (Stone, 1962). This list follows.

Osmoxylon Miq.

Ann. Mus. Bot. Ludg.-Bat. 1 (1863) 5. Philipson, Blumea 23 (1976) 99; Fl. Males. ser. I, 9(1) (1979) 31-53. — *Eschweilera* Zipp. ex Boerl. Ann. Jard. Bot. Btzig 6 (1887) 112, non *Eschweilera* Mart. 1828. — *Pseudo-santalum* O.K. Rev. Gen. Pl. 1 (1891) 271, as "Pseudosantalum", nom. illegit. — *Boerlagiodendron* Harms, E. & P. Nat. Pfl. Fam. 3, 8 (1894) 31; Hutchinson, Gen. Fl. Pl. 2 (1967) 72.
