Abstract

We describe and illustrate *Nototriche carabayensis* (Malvaceae), a new species from the high Andes of southern Peru. *Nototriche carabayensis* is related to *N. cupuliforme*, *N. antoniana* and *N. peruviana* by having a crown like structure at the base of the staminal tube, but differs by its white corolla with white-red veins, the nectaries deltoid and 11 stigmas. A description, illustration, photos of the new species, and a key to the Peruvian species with crown are provided.

Keywords

Andes, Malvaceae, *Nototriche*, Peru.
